PREFACE

The 1965 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has endeavoured to present the story of this development, summarizing a great mass of detailed statistical, legislative and other pertinent information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "Federal Government Surveying and Mapping", pp. 17-24; "Astronomy in Canada", pp. 47-55; "Use of the English and French Languages in Canada", pp. 180-184; "Agriculture in the Canadian Economy, 1964", pp. 440-446; "Canadian Forest Products and Changing World Markets", pp. 511-517; and "Operational and Technological Changes in Rail Transport", pp. 755-761. Changing emphasis has made necessary certain revisions in Chapter content and the inclusion of additional data which will be continuing features of the Year Book. Scientific and Industrial Research is covered in a separate Chapter and contains a selection of Canadian achievements in science and technology since 1800; a new Chapter is included on Land Use and Renewable Resource Development; the Public Finance Chapter contains a new Section covering Federal-Provincial Conditional Grants and Shared-Cost Programs; and the Chapter on Sources of Official Information and Miscellaneous Data contains for the first time a list of "Books About Canada". All Chapters include the latest data available at the time of printing and certain items in Chapter II on Constitution and Government, the cut-off date for which was Apr. 30, 1964, have been brought up to the date of Dec. 31, 1964 in the Appendix. A 140-mile-to-the-inch political map is enclosed in the pocket on the inside cover of the volume.

The present volume was produced in the Canada Year Book, Handbook and Library Division by Miss Margaret Pink, Associate Editor, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by L. Tessier of the Drafting Unit.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible, either to the persons or to the public service concerned.

Walter E. Suffert.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 lb.
1 U.S. pint=16 fluid ounces	1 long ton=2,240 lb.
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet
1 Imperial proof gallon=1.36 U.S. proof gallon	

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu. of wheat are required to produce 100 lb. of flour.

	<i>Pounds per Bushel</i>		<i>Pounds per Bushel</i>

Rapeseed and mixed grains.....	50		
All others.....	60		

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick
 Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
 Central Canada=Quebec and Ontario
 Prairie Provinces=Manitoba, Saskatchewan and Alberta
 Btu.=British thermal unit (coal)
 Mcf.=thousand cubic feet (gas)
 n.e.s.=not elsewhere specified
 n.o.p.=not otherwise provided for
 psi. (atomic research)=pounds-force per square inch (pressure)
 D.B.H. (forestry)=diameter at breast height.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed or where "a trace" is meant.
- ^p preliminary figures.
- ^r revised figures.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii.

PART I.—GEOGRAPHY AND GEOLOGY*

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W, a distance of 88° 23' or 3,223 miles. In latitude it stretches from Middle Island in Lake Erie, at 41° 41' N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83° 07' N, and the straight-line distance from Middle Island to Cape Columbia is 2,875 miles.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

*Revised by the Geographical Branch, Department of Mines and Technical Surveys.

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given in Chapter X on Land Use and Resource Development.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland.....	143,045	13,140	156,185	4.1
Island of Newfoundland.....	41,164	2,195	43,359	1.1
Labrador.....	101,881	10,945	112,826	3.0
Prince Edward Island.....	2,184	—	2,184	0.1
Nova Scotia.....	20,402	1,023	21,425	0.6
New Brunswick.....	27,835	519	28,354	0.7
Quebec.....	523,860	71,000	594,860	15.4
Ontario.....	344,092	68,490	412,582	10.7
Manitoba.....	211,775	39,225	251,000	6.5
Saskatchewan.....	220,182	31,518	251,700	6.5
Alberta.....	248,800	6,485	255,285	6.6
British Columbia.....	359,279	6,976	366,255	9.5
Yukon Territory.....	205,346	1,730	207,076	5.4
Northwest Territories.....	1,253,438	51,465	1,304,903	33.9
Franklin.....	541,753	7,500	549,253	14.3
Keewatin.....	218,480	9,700	228,180	5.9
Mackenzie.....	493,225	34,265	527,490	13.7
Canada.....	3,560,238	291,571	3,851,809	100.0

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,512 sq. miles,* the United States of America (including Alaska and Hawaii), 3,615,214 sq. miles,* and Brazil, 3,286,478 sq. miles.* It is more than forty times the size of Britain and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the currently accessible productive forested land 19 p.c. of the total. The population of Canada, estimated at 19,102,000 as at Jan. 1, 1964, may be compared with 186,591,000† for the United States (including Alaska and Hawaii) (1962) and with 75,271,000† for Brazil (1962).

The milages in Table 2 are another indication of the size of Canada. They show the length of communication facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities. In this table mileage given is for the major means of transport used between the points concerned; air milages are given for most transcontinental distances.

The length of Canada's southern border adjoining the United States is 3,986.8 miles and the length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

* United Nations Statistical Yearbook, 1962.

† United Nations Population and Vital Statistics Report, Jan. 1, 1964.

2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (R), rail (R), air (A) or water (W); air milages are given for most transcontinental distances. Water routes are given in nautical miles.

Section 1.—Physical Geography

Subsection 1.—Main Physical and Economic Features of the Provinces and Territories

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

The main physical and economic characteristics of each province and territory are described in some detail in the 1963-64 Year Book; this article is available in reprint form. Also, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23.

All geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare is available from the Geographical Branch of the

Department of Mines and Technical Surveys. The work of this Branch includes the compilation of geographical material of national significance and the conducting of geographical surveys in the field. Land surface conditions, land use, types of vegetation and the structure of towns and cities are typical subjects of investigation (see also p. 24). The Canadian Permanent Committee on Geographical Names, administered by the Branch, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

Subsection 2.—Inland Waters

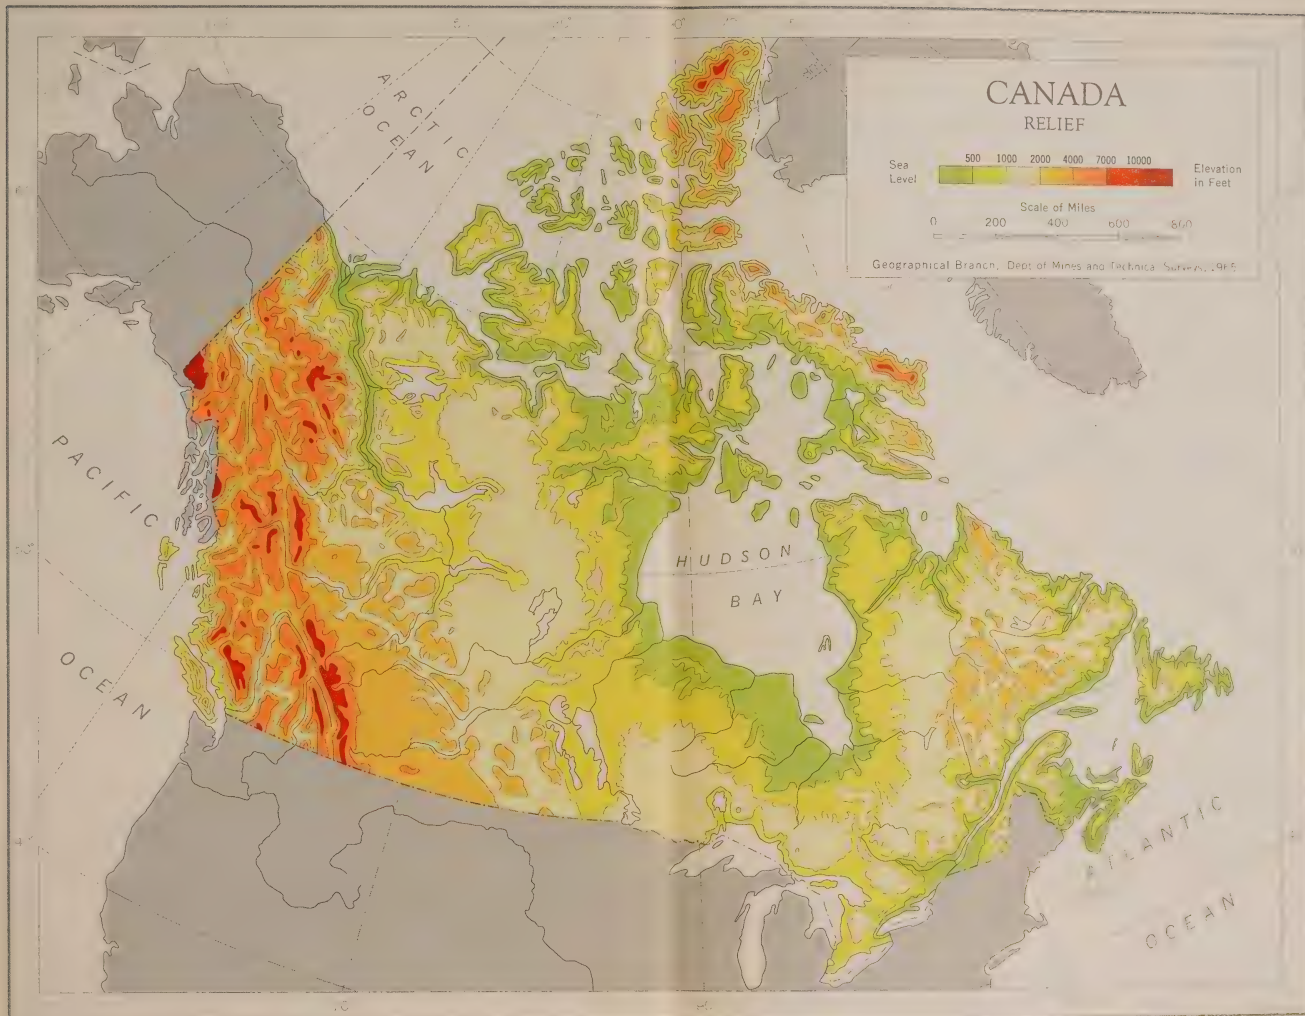

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social well-being. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, though the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within economical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, it is possible for steamboats to navigate from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro

developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indentation of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

3.—Lengths of Principal Rivers and Their Tributaries

Drainage Basin and River	Length	Drainage Basin and River	Length
	miles		miles
Flowing into the Atlantic Ocean		Flowing into Hudson Bay

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

4.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea Level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary

There are no tides in the Great Lakes although there is considerable variation in water levels caused by strong winds.

Other large lakes of Canada, ranging in area from 9,500 to 12,300 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

5.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water.

Subsection 3.—Coastal Waters*

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

* The Federal Government's oceanographic research program is outlined on p. 21.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf, surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands (see below) is the subject of extensive study. Since 1959 a party based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The investigations should yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters, the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the behaviour of sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Subsection 4.—Islands

The largest islands of Canada are in the north and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait-Viscount Melville Sound-Barrow Strait-Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 5.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication.

Section 2.—Geology*

North America comprises six main natural regions which are both physiographic and geological because the ages, kinds and structures of the underlying rocks determine the natures of the land surfaces. Knowledge of these regions is important because their geological characteristics have much influence on the suitability of different areas for such activities as agriculture, mining, petroleum production and sports, and contribute as well to the varied scenery of the country. The six regions are: the Canadian Shield, a vast area of ancient rocks that is mainly in Canada; the Interior Plains and Lowlands, the largest area of which extends throughout the mid-Continent from the Gulf of Mexico to the Arctic Ocean; the Appalachian Region, mainly in the United States but also forming an important part of Eastern Canada; the Cordilleran Region, extending along the entire west coast of the Continent; the Atlantic Coastal Plain along the eastern seaboard of the United States; the

* Prepared by Dr. A. H. Lang and published by permission of the Director, Geological Survey of Canada, Ottawa.

and the Innuitian Region, a mountainous belt in the Arctic Archipelago. Canada includes parts of four of these regions and all of the Innuitian Region, but none of the Atlantic Coastal Plain.

The Canadian Shield, embracing about one half of the total area of Canada, is a roughly horseshoe or shield shaped terrain of some 1,850,000 sq. miles, having Hudson Bay at its approximate centre. The Shield continues into the United States west and south of Lake Superior, and east of the upper St. Lawrence River where a belt of resistant rocks called the Frontenac Axis forms the Thousand Islands and, to the south, broadens to form the Adirondack area. Far back in geological time the Shield contained many ranges of high mountains but these have been mainly worn down to a surface of moderate relief consisting of hills, ridges and valleys containing innumerable lakes and streams. Most of the surface is from 600 to 1,200 feet above sea level but higher uplands form such well known features as the Laurentian Mountains north of Montreal and the Haliburton Highlands in southeastern Ontario. Along the coast of Labrador and in Baffin Island are mountains rising 5,500 and 8,500 feet, respectively, above the sea. The Shield is a complex assemblage of Precambrian rocks that, as a whole, represent at least five sixths of the long duration of geological time. Most of the rocks have been subjected to more than one and in some cases several periods of orogeny, resulting in intricate structures, intense metamorphism, widespread igneous intrusions, and alteration of much ancient sedimentary rock to granite and related material. These complexities combined with the absence of fossils, which facilitate the correlation of strata younger than Precambrian, hamper interpretation of the geology of the Shield. Nevertheless, progress has been made and methods developed in Canada have been applied to Precambrian shields of other continents.

Flanking the Shield are large expanses of plains and lowlands underlain by relatively young and soft rocks overlain in many places by good agricultural soils. A notable characteristic of the boundary between the Shield and the Lowlands is the presence of large lakes that lie partly in rock basins in the Shield and partly in depressions in the younger strata. The most prominent are Great Bear Lake, Great Slave Lake, Lake Athabasca, Lake Winnipeg and Lake Huron. The largest lowland area is that of the Interior Plains, sometimes called the Great Plains or Western Interior Lowlands. These constitute the prairies of Western Canada and their wooded continuation to the north. The Northern Interior Lowlands include the Hudson Bay Lowlands south of Hudson Bay, the Foxe Basin Lowlands in and near western Baffin Island, and the Southern Archipelago Lowlands which occupy large parts of the more southerly Arctic islands. The Arctic Coastal Plain bordering the Arctic Ocean is sometimes classed as a separate physiographic region comparable to the Atlantic Coastal Plain but is here grouped with the other plains and lowlands for simplicity. The Great Lakes-St. Lawrence Lowlands form two important agricultural and industrial areas in southern Ontario, separated by the Frontenac Axis; the more easterly continues in Quebec, on both sides of the St. Lawrence River, and an isolated continuation forms Anticosti Island. Sedimentary strata of Palæozoic and younger ages overlap the Shield to form the Plains and Lowlands. These strata once covered much more of the Shield before being removed by erosion. The Shield continues under the Plains, as is proved by numerous wells drilled for oil or gas in the Great Plains and in southern Ontario having been bottomed in typical Shield rocks, but it is customary to regard the Canadian Shield Region as the part that is exposed or covered by glacial deposits. The overlying strata are undisturbed or gently tilted or flexed, the Shield and the Plains and Lowlands together forming a central continental region that has been relatively stable since Precambrian time, while orogenies were active in the flanking geosynclinal belts now indicated by the Appalachian, Cordilleran and Innuitian mountains.

The Canadian Cordilleran Region is a northwesterly-trending belt about 500 miles wide composed of high mountains and lower plateaux and valleys. It comprises southwestern Alberta, all of British Columbia except its northeastern corner, almost all of Yukon Territory and the southwestern part of the Northwest Territories. The individual mountain groups and plateaux are arranged in a complex pattern divisible into three parallel northwesterly-trending zones; in most places these zones are quite distinct and are called

the Western, Interior and Eastern Systems. The greater part of the Western System is composed of the high, rugged Coast Mountains along the mainland coast of British Columbia. Along part of the Yukon-Alaska boundary they are flanked to the southwest by the still higher St. Elias Mountains. Separated from the mainland by the Insular Passage are ranges forming Vancouver and Queen Charlotte Islands. The Interior System is a complex group of plateaux and mountains. The Eastern System is divided into the Northern Ranges and the Rocky Mountains, separated by a plain and plateau along the Liard River near the British Columbia-Yukon boundary. The main features of the Northern Ranges are the British and Richardson Mountains near the Arctic Coast, and the Mackenzie and Franklin Mountains in the western part of the Northwest Territories. The Rockies are composed of high, serrated ranges extending northward from the 49th Parallel; the elevation of the highest peak, Mount Robson, is 12,972 feet. Flanking them on the east are the Rocky Mountain Foothills which form a transition with the Plains. Because the Rocky Mountains, although extensive, are but a relatively small part of the mountains of Western Canada, the popular tendency to apply the name to the entire Canadian Cordillera is inadmissible.

The Cordillera are on the site of a great geosyncline where sediments were laid down at least as early as late Precambrian time, where marine sedimentation continued in places as late as the Upper Cretaceous, and where freshwater sediments were deposited locally during the Tertiary. The principal mountain-building and igneous processes of which good evidences remain began locally in early Mesozoic time, culminated in the western Cordillera in the Nevadan orogeny in late Jurassic and early Cretaceous time, but was not significant in the eastern Cordillera until the Laramide orogeny early in the Tertiary. Thus the western Cordillera were formed much earlier than the eastern, were largely worn down by erosion by the time the Rockies and other eastern mountains were built, and the western part of the region was uplifted at the time of the Laramide orogeny so that renewed erosion could carve the surface into the present mountains and plateaux. The strata in the western Cordillera are intruded by many bodies of igneous rocks, from small to very large in size. Most are granodiorite or diorite but many others are granite, gabbro or other related types; still others are ultrabasic, i.e., composed mainly of iron and magnesium minerals. Most are related to the Nevadan orogeny but some must have been intruded in late Cretaceous or early Tertiary time, and there is incomplete evidence that some are of ages from late Precambrian to Triassic. The intrusions are scattered widely, the largest concentration being the Coast Range Intrusions which form the greater part of the Coast Mountains. Intrusive rocks are rarely exposed in the eastern Cordillera, probably because the mountains there have not been eroded sufficiently to reveal many.

The Appalachian Region is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a geosyncline that existed mainly in Palaeozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region is a long curving fault or zone of faults which extends from Lake Champlain at least as far as the Gulf of St. Lawrence and which causes the curved shape of the northern coast of Gaspé. The strata in the Appalachians have been folded and faulted by successive periods of orogeny along axes that strike northeasterly; thus strata of different kinds and ages and belts of intrusive rocks form northeasterly-trending bands, many of which are responsible for the peninsulas, bays and ridges of the region. Three principal periods of orogeny—the Taconic, the Acadian and the Appalachian—have been recognized. The Taconic occurred at the close of the Ordovician, the Acadian during the Devonian, and the Appalachian at the close of the Palaeozoic. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic and areas that were not, but the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

The Innuitian Region is underlain by moderately-to-intensely folded sedimentary, volcanic and metamorphic rocks of various ages, the oldest being probably Proterozoic and the youngest being Tertiary. Folding occurred at different times and in different

directions, some in early Devonian time, some late in the Palæozoic era, and some in Tertiary time. Five fold-belts have been recognized—Cornwallis, Parry Islands, Central Ellesmere, Northern Ellesmere and Eureka Sound. Granitic intrusions have been found in the Northern Ellesmere belt.

Brief sketches of the geological regions together with an outline of geological processes are given in the 1961 Year Book at pp. 1-14. Further information is supplied by *Geology and Economic Minerals of Canada* (\$2, including Map 1045A) and *Prospecting in Canada*; the latter also contains chapters on the principles of geology and on minerals and rocks. The *Geological Map of Canada* (1045A, 50 cents) and *Canada, Principal Mining Areas* (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications may be ordered from the Director, Geological Survey of Canada, together with lists of reports and maps of the Geological Survey of Canada on specific topics and areas, for each province. Other publications are available from provincial mines departments.

Section 3.—Federal Government Surveying and Mapping*

Technical surveys, maps and charts are basic tools in the acquisition of knowledge of a country's physical features and its resource potential; they are essential for resource development, for extending trade and commerce, and for administration, defence, educational and recreational purposes.

In Canada the needs of government, industry and the public in this field are met largely by the federal mapping agency, the Department of Mines and Technical Surveys. To this Department falls the Herculean task of mapping Canada's 3,852,000 sq. miles of territory and the charting of its inland waters and of its thousands of miles of coastline, the longest coastline of any country in the world. It is responsible for compiling and printing topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, specialized maps, such as electoral and boundary maps, land-use maps and general maps of Canada at various scales. It is responsible, too, for the establishment of a national framework of survey control necessary for mapping and engineering purposes.

The Department's surveying and mapping activities take it, on land, into every nook and corner of the country from the Atlantic Ocean to the Pacific and from the International Boundary on the south to the outer fringe of the Arctic Archipelago in the Far North. On water, it is charged with the charting of inland waters and the charting and carrying out of oceanic surveys in the waters of the continental shelf and in the deep ocean. In the air, it is responsible for measuring the heights of land to assist air navigation over Canada and for carrying out geophysical surveys to acquire a knowledge of the composition and structure of the earth's crust in Canadian territory.

To assist it in this tremendous task, the Department makes use of the latest in techniques and instruments and, in addition, carries out a broad program of research to enhance the accuracy and efficiency of its maps and surveys. It has a staff of 4,000, of whom 1,000 are scientists and engineers and 1,300 are trained technicians. Each year it places some 1,500 men in the field to carry out survey and research programs, the results of which are brought back to Ottawa and produced in the form of maps, charts and reports.

* Prepared by Mary J. Giroux, Head, Special Projects Section, Editorial and Information Division, Department of Mines and Technical Surveys. Copies of maps and charts may be purchased from the different branches of that Department in Ottawa, as follows: topographic, planimetric, land-use and electoral maps, aeronautical charts and sheets from the *Atlas of Canada* from the Map Distribution Office at 615 Booth St.; hydrographic charts from the Marine Sciences Branch and aerial photos from the National Air Photographic Library, both at 615 Booth St.; geological and aeromagnetic maps from the Geological Survey of Canada at 601 Booth St.; and magnetic charts and gravity maps from the Dominion Observatory, Carling Ave.

The Department has six branches, all of which, except the Mines Branch, are engaged in mapping and/or various types of surveying: the Surveys and Mapping Branch carries out geodetic surveys and produces base maps, electoral and other specialized maps and aeronautical charts; the Marine Sciences Branch charts inland waters and carries out oceanic surveys and oceanographic research in Canada's coastal waters and in the deep ocean; the Geological Survey of Canada maps and studies Canada's geology; the Dominion Observatories and the Geological Survey carry out geophysical surveys, and the Geographical Branch is making a physical and economic appraisal of the country.

Requests for topographic, geological, aeromagnetic and other types of mapping are submitted to the Department by other federal departments, provincial governments, private enterprise and the public. In determining its mapping and survey programs, the Department gives attention to the mapping of those areas where national interests are best served, since it is impossible to fill all the requests received. Each of the provinces carries out its own mapping program in line with its capabilities and particular requirements. To avoid duplication of effort, the Department maintains a close liaison with provincial governments and industry. The provision of hydrographic and aeronautical charts is, however, the responsibility of the Federal Government only.

Survey Methods.—The mapping of Canada presents many problems to federal map-makers, the chief being those arising from the great distances to be covered and from access difficulties. In overcoming such problems, they have been greatly assisted in recent years by the use of the aeroplane and the helicopter, the use of air photography, the use of such modern devices as shoran trilateration and such electronic instruments as the geodimeter, the tellurometer and the aerodist, and by the advances made in photogrammetry, i.e., the plotting and compilation of maps and air photographs.

The highly successful combination of fixed wing aircraft and helicopters has made possible the carrying out of economic and accurate surveys in many otherwise inaccessible areas. Another highly successful combination, the helicopter and the tellurometer, has made possible the completion of 200 miles of traverse in one day, and a season's work may now be reckoned in thousands of miles instead of in hundreds. The use of the helicopter has speeded up immensely the geological reconnaissance mapping of Canada's northland and its mountainous areas, so much so that the Geological Survey expects to complete this type of mapping by 1970 instead of a few generations hence as thought previous to 1952, when the helicopter was first used for aerial geological mapping.

More recently, the addition of the aerodist, the latest development in electronic distance-measuring instruments, has facilitated the establishment of topographic survey control, from the air, over muskeg and densely wooded country. In a trial project in 1963, a topographical party in northwestern Ontario established survey control for 37,000 sq. miles of territory on a scale of 1/50,000, or approximately one mile to the inch, in a matter of 7½ days. Such a project, by conventional methods, would have taken a year to complete on not-too-difficult terrain, and years of effort on this particular terrain.

Air photography, the forerunner of all mapping, has speeded up immeasurably the process of mapping. With the exception of some 40,000 sq. miles in northeastern Quebec and northern Labrador, Canada (including the Arctic Archipelago) has been completely covered with vertical air photography, suitable for small-scale mapping. Many areas must now be mapped at larger scales for development and other purposes and to meet specialized needs. This will require some up-to-date large-scale photography and periodic rephotography for revision purposes.

One of the greatest innovations in base mapping has been the development of photogrammetry, the science of obtaining reliable measurements of objects from the aerial photography of these objects. Before photogrammetry was used in mapping, all objects had to be positioned and their heights measured on the ground. With photogrammetry, costly time in the field has been greatly reduced and much of the detailed work can be

done in the office under well controlled conditions. The Department is constantly investigating and developing new and better photogrammetric techniques to reduce the cost of mapping and to keep maps up to date and useful.

Geodetic Surveys.—The Department's Geodetic Survey provides the framework of control, i.e., horizontal and vertical control, for mapping and engineering operations carried out in Canada. The horizontal control network consists of a series of points, usually marked by survey tablets, the latitudes and longitudes of which have been accurately determined. The work progresses from points whose positions are already known to unknown points. The vertical control network consists of a series of points, usually marked by survey tablets and referred to as bench marks, whose elevations above sea level have been accurately determined.

The Geodetic Survey has extended first-order horizontal control over the ten provinces and into the territories, as shown on the accompanying map. It is gradually extending this precise control in the North and, at the same time, is increasing the density of control in the southern areas. In the North, the network of precise control will gradually replace that established by the Survey by means of shoran trilateration between 1948 and 1957 over the territories and the Arctic Archipelago to permit the reconnaissance mapping of this vast remote and isolated region. Shoran is an electronic method of measuring distance by air.

The Canadian precise level network consists of 44,500 miles of levelling, mostly along highways and railways south of the 55th parallel. The principal lines in the more northerly regions follow the railways to Churchill, to Lynn Lake and to Waterways; the Mackenzie Highway to Hay River on Great Slave Lake; and the Alaska Highway to Yukon Territory and Alaska. There are also a few lines in the Peace River district of Alberta and in northern British Columbia and Yukon Territory. In all, some 15,000 bench marks have been established in the course of this levelling and, in addition, there are about 16,000 miles of second-order levels, most of which were established prior to 1930. The ultimate goal of the Geodetic Survey is the establishment of at least one horizontal and vertical control point within ten miles of any point in Canada.

Topographical Mapping.—The basic requirement for resource development is, of course, suitable topographical maps of the country's vast land mass. The Department, through its Topographical Survey and in conjunction with the mapping agency of the Department of National Defence, is pressing forward with the topographical mapping of the country at the medium scale of 1/250,000, or about four miles to the inch, which it hopes to achieve by 1967, and with the larger scale mapping at 1/50,000 in the more settled areas and areas of greater economic importance. About 35 p.c. of this task has been completed. The third objective is to provide topographical mapping at a scale of 1/25,000 to assist the orderly planning and development of areas of special economic significance such as urban, suburban, mining and industrial districts. The progress the Survey is making in the mapping of the larger Canadian centres at this scale is also assisting it in carrying out a fourth objective—the systematic revision of out-dated maps. The rapid growth of industrial areas in Canada during the past two decades has completely changed the topographical face of these areas and made necessary the updating of existing maps.

Currently, topographical field parties in one field season cover a total of some 225,000 sq. miles for the average production of 30 maps at 1/25,000, of 300 maps at 1/50,000, and of 45 maps at 1/250,000. In one of its most challenging projects, the Survey, in co-operation with the Army Survey Establishment of the Department of National Defence, carried out the topographical mapping of the 500,000 sq. miles of territory of the Arctic Archipelago in the period 1960-63, and hopes to have these maps available for the public by 1967.

An idea of the amount of work done by a field party and the calibre of men on these parties may be gained from an account of the activities of one of the parties engaged in the mapping of the Arctic islands. In 1962 a party of 14 men, including aircrew, was

assigned to map the northernmost region of Ellesmere Island. With three helicopters and in extremely rugged country and under the most difficult of conditions, these men, for a period of over three months, worked from ridge to ridge of heights of from 5,000 to 8,000 feet above sea level and up to within 400 miles of the North Pole. By the end of the season, despite the unserviceability of one of the helicopters, they had succeeded in mapping their allotted territory of 70,000 sq. miles, a remarkable performance even in the light of modern-day achievements.

Legal Surveys.—The growth of the Canadian economy has increased the demand for legal surveys on Crown lands. The development of Canada's northland has brought a high demand for these surveys in the Yukon and Northwest Territories. To the south, highway construction, the growth of the oil industry and other factors have led to an increasing requirement for the subdivision and demarcation of Indian reserves and National Parks and occasionally other lands in which the Federal Government has an interest.

To enable legal transactions involved in the administration of these lands, the Department each year sends parties, headed by staff surveyors, into the field to carry out legal surveys. The services of private surveyors are enlisted each year to supplement the work of the Department's parties.

Interprovincial Boundaries.—The Federal Government, through the Department, works with the provinces in the surveying of interprovincial boundaries. In the early 1960's for instance, it completed, with the co-operation of the provinces concerned, one of its largest projects to date—that of surveying the 1,500-mile boundary between the Provinces of British Columbia, Alberta, Saskatchewan and Manitoba and the Yukon and Northwest Territories. Demarcation of the 60th parallel as the boundary between these provinces and territories had been started in 1899. In August 1963, the Minister of Mines and Technical Surveys and provincial authorities marked the occasion with a historic ceremony in the northern wilderness 700 miles north of Winnipeg and paid tribute to the men who had "chopped their way through dense forests, toiled up and down snowcapped mountains, forded streams and lakes and muskeg and coped with 60-below weather in winter and swarms of flies and bugs in summer".

The International Boundary.—The maintenance of the International Boundary is the responsibility of the International Boundary Commission which functions by virtue of the treaty of 1925 between Canada and the United States and the International Boundary Commission Act of 1960. The Act is administered in Canada by the Department through the Surveys and Mapping Branch and is operated through the Department of External Affairs. The treaty empowers and directs the two Commissioners, one from Canada and one from the United States, to inspect and provide for the maintenance of an effective boundary line between the two countries and to determine the location of any point of the boundary line which may become necessary in the settlement of any question that may arise between the two governments. The work of the Commission is a treaty obligation and does not duplicate or overlap provincial activity of any kind or the work of other federal departments.

Aeronautical Charts.—This is one of the Department's most active fields of mapping, mainly because of rapid developments in air navigation. Continual changes in aircraft and in air-navigation facilities (radio ranges, airways, etc.) necessitate a continuous program of revision of aeronautical charts and air information publications in the interests of civilian and military users. Another continuing requirement is for new types of charts to meet specific aviation needs.

Electoral Maps.—The Department handles the preparation of descriptions and diagrams of federal electoral districts. The proposed readjustment of representation of the provinces in the House of Commons will mean the readjustment of electoral boundaries and

therefore the preparation of descriptions of the boundaries of the redistributed districts and other work required in connection with Sect. 7 of the Representation Act (RSC 1952, c. 334).

National Air Photo Library.—The Library keeps complete records of all survey photographing done by or for the Federal Government, including a copy of each photograph and information on the flight lines, the flying agency, the film and camera operations. Established in 1925 under the Topographical Survey to function as a central reference library of national air photography, it has on file some 3,000,000 oblique, vertical and trimetrogon photographs, which provide an aerial view of all Canada.

Hydrographic and Oceanic Surveys.—Hydrographic and oceanic surveys in Canada's navigable waters are conducted by the Department's Marine Sciences Branch. Operations are directed from Ottawa and carried out through three regional offices—the Bedford Institute of Oceanography on the Atlantic Coast, the Pacific Coast Regional Office at Victoria and the Central Regional Office at Ottawa. Planning is under way to construct a Victoria Institute, similar in size and complexity to the Bedford Institute, from which all Pacific Coast operations will be co-ordinated.

To carry out hydrographic and oceanic surveys and research, the Branch operates a fleet of ships and launches including some privately owned vessels chartered for the purpose. Five of the major vessels operate out of the Bedford Institute and four out of Victoria with one vessel based in the Great Lakes. Land-based parties, equipped with launches, operate on coastal and inland waters and teams of hydrographers and oceanographers travel to the Arctic with the Department of Transport supply vessels to chart and study waters and harbours en route.

The Branch estimates that, at the present rate of charting, it will take more than fifty years to complete initial surveys of Canadian waters; meanwhile, the demands from industry, defence and the pleasure-boat operator for accurate and up-to-date charts continue to increase. To speed up its hydrographic and oceanographic work, the Branch plans the construction of 12 survey and research ships at a cost of \$50,000,000 during the period 1964-70. In 1964 a \$7,000,000 oceanographic research vessel, *CSS Hudson*, was commissioned and attached to the fleet at the Bedford Institute. The *Hudson* is a floating laboratory, capable of hydrographic and oceanographic work anywhere in the world, but it will serve mainly in the Arctic and Atlantic Oceans. Its main tour of duty in 1964 was a full-scale geophysical investigation of Hudson Bay.

The work of the Marine Sciences Branch also includes the analysing of tides and tidal current phenomena and the investigation of water levels. To meet the needs of charting, navigation, engineering and defence for constant and detailed information on water levels, it operates 92 permanent water-level gauging stations in coastal and inland waters and uses the services of local temporary gauge attendants for transmission of the data to Ottawa. Temporary gauge stations are also operated in various areas where short-term data are required. A long-term study is being made of the circulation in the Gulf of St. Lawrence which will be of great value for ice forecasting and other studies to facilitate winter navigation. Current surveys on the West Coast are carried out by the Pacific Coast regional office.

In 1963, the Marine Sciences Branch published 58 new charts, bringing the total number of catalogued charts to 930. Distribution reached a new high of 170,000 standard charts and a total, including various special charts produced, of over 217,000.

Geological Mapping.—The Geological Survey of Canada maps and studies the geology of Canada and carries out specialized research to enable its geologists to map and explain the geology of the country more effectively. It is the major organization engaged in this field in Canada and its studies are nation-wide. The Survey works closely with provincial agencies and endeavours, after prior consultation with the provincial government concerned, to fill in the province's geological framework and provide a basis for more

detailed mapping by provincial and company geologists. In areas under development, the Survey does more detailed mapping to supply industry with the geological key to the structures of orebodies.

Each year more than 100 parties are placed in the field. Field officers send rock and mineral samples to the many laboratories at Survey headquarters for various tests and analyses and the information obtained from these investigations is published in the form of maps and reports. In 1963, requests were received for some 320,000 geological maps and reports.

The Survey continues to press forward with its first priority, the reconnaissance geological mapping of Canada, in the interests of national development. The introduction in 1952 of the use of the helicopter and fixed wing aircraft as operational support has resulted in the more efficient coverage of much larger areas and has brought much closer the completion of this project. At the end of 1963, the Survey had published maps covering about 65 p.c. of the country on a scale of one inch to eight miles or in more detail. And the new program is already paying dividends. For example, the reconnaissance mapping of the central and western Arctic islands has revealed the region's oil potential with the result that petroleum companies are now engaged in major exploration programs in the islands, which is undoubtedly the largest petroleum reservoir in Canada and perhaps in North America.

Although the Survey's principal effort, about half the cost of all field parties, is devoted to reconnaissance investigations, other parties continue to do four-mile bedrock mapping and to carry out a wide variety of investigations, including detailed studies of bedrock and surficial deposits, geophysics, groundwater, geochemistry and engineering geology. A recent major mapping project was an all-out effort involving bedrock geology, geochemistry, geophysics and the study of overburden in a 50,000-sq. mile area in the Patricia District of northwestern Ontario, in connection with the Federal Government's Roads-to-Resources Program. This project, begun in 1959 and completed in 1961, was a co-operative effort with the Ontario Provincial Government. The resultant geological, geophysical and geochemical maps enabled the respective departments to select the areas most likely to produce mineral wealth and to select the routes for the roads to these areas. The success of this venture prompted the Federal Government, through the Geological Survey, to begin in 1961 an \$18,000,000 federal-provincial program of aeromagnetic surveys of the Canadian Shield and bordering areas to be completed within 12 years. The surveys are being made, under contract, by various established survey companies and their cost is being shared equally by the province concerned and the Federal Government; surveys in the Yukon and Northwest Territories are financed by the Federal Government.

The Geological Survey has offices in three provinces and both territories—at Vancouver, B.C.; Calgary, Alta.; Whitehorse, Y.T.; Yellowknife, N.W.T.; and Dartmouth, N.S. These offices are staffed with resident geologists.

Geophysical Surveys.—Geophysicists of the Geological Survey of Canada and the Dominion Observatory conduct and interpret geophysical surveys as an aid to the understanding of the geology of Canada and the nature of the earth's interior. Their work also includes research on the development of new geophysical methods and instruments.

Recent projects include: continued investigation and evaluation of the extent to which aerial and colour photography and aeromagnetic data can be used to facilitate and expedite geological mapping; seismic surveys in various parts of Canada to establish the existence of buried channels and depths to Precambrian or other bedrock surfaces; a resistivity survey in southern Manitoba to delineate near-surface groundwater-bearing zones; a sea-magnetometer survey off Newfoundland and Nova Scotia in the study of the continental shelf; and a micromagnetic survey in northwestern Ontario to investigate known magnetic anomalies in some Precambrian iron-formations. Hammer seismic surveys were used successfully in the Moncton area of New Brunswick to outline bedrock surface and buried depressional features, which may be of assistance in groundwater

studies, and in the Kirkland Lake area of northern Ontario overburden thicknesses were measured and bedrock channels outlined, a project of possible assistance in locating placer gold deposits.

The Dominion Observatory studies and collects information on the geomagnetic field in Canada and publishes it in the form of maps and charts. Every ten years it issues a set of charts showing the direction and intensity of the field in all parts of the country and, at five-year intervals, it publishes the chart which is greatest in demand—that of magnetic declination (or variation). These charts must be revised periodically because the earth's magnetic field changes its direction and strength from year to year. Most of the information shown on the magnetic charts now originates in surveys carried out with the Observatory's three-component airborne magnetometer. In November 1963, Observatory geophysicists conducted a 37,000-mile survey in the High Arctic—the area extending from the mainland of North America to the North Pole, east to the Greenwich meridian and west to the international dateline. The data collected constitutes part of Canada's contribution to a magnetic map of the world.

Because the auroral zone passes through Canada and the North Magnetic Pole is located within Canadian borders, the Dominion Observatory plays an important role in the world-wide investigation of geomagnetic disturbance.

The Observatory is systematically mapping the gravity field in Canada on a regional basis with measurements at points 8 to 10 miles apart. These results, published in the *Gravity Map Series of the Dominion Observatory*, reveal the major density features of a region and are useful in geological studies. Detailed gravity surveys are also carried out to delineate local crustal structures.

In 1963, the Observatory continued regional gravity mapping activities in Southern Canada and in the Arctic; made an extensive study of the Timmins-Kirkland Lake-Noranda mining areas; continued gravity studies of the Atlantic continental shelf and eastern coastal waters of Canada; made some 600 gravity measurements on the ice of the Arctic Ocean and in the northern Archipelago; and carried out field investigations of six craters of possible meteorite origin in Ontario, Quebec and Saskatchewan. Work was continued on the expansion and modernization of Canada's seismological network, which, when completed, will consist of some 30 seismic stations established at 500-mile intervals throughout the country for the threefold purpose of assisting in the study of the earth's interior by international seismology, assisting in the study of nuclear explosions, and furnishing information on seismic risks in Canada. Three new stations were added in 1963, bringing the number to 16; in addition, there are three private seismological stations which report to the Dominion Observatory.

In 1962, the Observatory, in co-operation with the Department of National Defence and British scientists, set up a crossed array of seismographs at Yellowknife, N.W.T., to assist in policing any test-ban treaty. The array also provides an important tool for the study of the earth's structure.

International Projects.—Canada, like other nations, must shoulder its share of international scientific studies. One such study under way is the Upper Mantle Project, an international scientific study of the earth's upper mantle—that part of the earth's interior lying just below the crust. Two forms of study are being used—the direct approach of geology and the indirect approach of geophysics. Canada's contribution is being carried out by the Department of Mines and Technical Surveys and by some Canadian universities through grants from the National Research Council.

The Geological Survey in 1963 drilled three holes into selected parts of the Muskox Ultrabasic Intrusion in the Northwest Territories and are preparing to drill a deep hole in the Mount Albert Ultrabasic Intrusion in Quebec's Peninsula in 1965—locations where dense mantle material is believed to have broken through the crust to the earth's surface. A detailed study of diabase dykes across the country will also be made in an endeavour to cast some light on conditions within the mantle. Other projects include the start of a

detailed geological and geophysical study across the mountains from about Banff in Alberta to Vancouver, and studies of the area between Greenland and Canada.

Geophysicists of the Dominion Observatory are using seismology, gravity, geomagnetism and the study of earth currents and heat flow in the study of depths beyond the reach of drilling. Seismological data are obtained from two sources—the network of seismic stations being set up throughout the country for the study of earthquakes, and explosion seismology to determine the depth of the mantle beneath the earth's crust. At most of the stations in the seismic network, holes will be drilled to measure heat flow from within the earth and heat-flow measurements will also be taken from holes drilled by departmental geologists. Gravity data are used to locate areas in Canada where the heavy rocks of the upper mantle lie closest to the surface and to study vertical movements of the crust in response to surface loading and currents within the mantle, and variations in the earth's magnetic field are employed to estimate the electrical conductivity of the mantle.

In another fundamental study, aimed at a better understanding of the solar system and the early history of the earth, Observatory scientists are studying circular structures believed to be the result of the impact of meteorites. Geophysical surveys are being used to investigate a number of such features that have been located in the Canadian Shield (see also p. 45).

Geographical Surveys.—The Geographical Branch of the Department carries out various types of surveys, ranging from terrain and glaciological studies to surveys of sea-ice distribution and of urban and rural land use. Major projects currently under way include a long-range study of Baffin Island, the detailed geomorphological mapping of the dry regions of southwestern Saskatchewan, and the study and mapping of sea-ice distribution in the St. Lawrence River and Gulf and in the Queen Elizabeth Islands. The latter is part of the Department's oceanographic research program and the relationships between the various climatic factors and ice distribution are being studied in an effort to improve the accuracy of long-range ice forecasting.

The investigation of Baffin Island includes the mapping of surface conditions, the study of the history of the landscape's development, and research into geomorphic processes affecting present-day landscape changes. This work is largely of an experimental nature and should provide more precise information on the character of natural processes affecting the development of terrain, relative movements of land and sea, retreat of glaciers, mass movement of the surface materials, and the distribution of patterned ground in relation to permafrost. Many of these studies have an important bearing on engineering problems, the development of resources, and the determination of the feasibility of cross-country travel in the North. Experimental geomorphic maps have been completed showing surface conditions for parts of Ellef Ringnes Island, and the results of this work are being applied to geomorphic and hydrographic (surface water) mapping at 1/50,000 in the semi-arid prairie areas.

A comprehensive study of land use in Prince Edward Island, the first of a series of monographs to be prepared in the land-use mapping program, was produced in 1963. By early 1964 some 30 land-use maps, at various scales, had been published covering such areas as the important fruit-growing region of the Niagara Peninsula, large tracts of Nova Scotia and New Brunswick, parts of the Prairie Provinces, and the Lower Fraser Valley of British Columbia. This program is being modified to embrace the mapping of land use of the whole of Southern Canada on a scale of 1/50,000 and will form part of the Canadian Land Inventory of the Agricultural Rehabilitation and Development Act program (see Chapter X on Land Use and Resource Development).

In the urban field, geographers are mapping the physical characteristics, population distribution, population fluctuations and urban land use of major Canadian cities. The mapping of the city of Vancouver has been completed and detailed studies of Montreal and Toronto are under way. The data collected will provide a valuable basis for intensive research into many aspects of urban geography.

PART II.—PUBLIC LANDS AND WILDLIFE

Section 1.—Federal and Provincial Public Lands

In Table 1 classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

1.—Total Area classified by Tenure (circa) 1963

Item	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles
1. Privately owned land or land in process of alienation from the Crown.....	6,798	2,058	16,162	15,478	43,500	46,409
2. Federal lands other than leased lands, National Parks, Indian reserves and forest experiment stations.....	160	83	165	612	373 ¹	1,124
3. National Parks.....	153	7	367	79	²	12
4. Indian reserves.....	—	4	40	60	291	2,431
5. Federal forest experiment stations.....	—	—	—	35	7	41
6. Provincial lands other than Provincial Parks and provincial forest reserves.....	148,879	30	4,690	10,685	476,725	337,579
7. Provincial Parks.....	78	³	1	1	67,486	5,460

Totals.....	251,000	251,700	255,285	366,255	1,511,979	3,851,809

¹ Includes Gatineau Park (97 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks.

⁴ Includes that part of Wood Buffalo Park in Alberta (13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Northern Administration Branch, Department of Northern Affairs and National Resources. ⁵ That part of Wood Buffalo Park in N.W.T. ⁶ A forest experiment area of 25 sq. miles is included in National Parks figure. ⁷ Includes 1,855 sq. miles of provincial park land within provincial forest reserves.

Federal Public Lands.—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Parks and Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 1). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 83 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration Branch of the Department of Northern Affairs and National Resources.

Provincial Public Lands.—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVIII, under "Lands and Land Settlement".)

Subsection 1.—National Parks

The National Park concept—the preservation of significant areas in their natural state for the benefit and enjoyment of the public—was developed in North America and Canada has the second largest number of National Parks and National Historic Parks in the world.

The Canadian system dates from 1885. In that year a 10-sq. mile reserve was established by the Federal Government around the mineral hot springs of Sulphur Mountain at Banff in Alberta and in the following year two spectacular areas in southern British Columbia were set aside as parks. By 1930, the National Park system comprised a number of natural and wildlife reserves in Western Canada and three small areas in Ontario. Since 1935, four park areas have been added, one in each of the Atlantic Provinces, bringing the total number across the country to 18 and the total area to 29,275 sq. miles.

These Parks, with the exception of that large northern area extending across the border of Alberta and the Northwest Territories known as Wood Buffalo Park, are administered by the National Parks Branch of the Department of Northern Affairs and National Resources; Wood Buffalo Park is administered by the Northern Administration Branch of the same Department. According to the National Parks Act of 1930, the Parks are to be preserved for the "benefit, education and enjoyment of the people of Canada" and are to be maintained and used "so as to leave them unimpaired for the enjoyment of future generations". Thus, these areas fulfil their intended function of preserving many unique examples of Canadian scenery, magnificent forests, and varied kinds of plant and animal life. And to enable the public to make maximum use of this park heritage, campgrounds, roads, trails, picnic areas, beaches, recreational facilities and, at some parks, golf courses and bathing establishments are provided by the National Parks Branch; and motels, hotels,

lodges and other visitor services are provided by private enterprise on land leased from the Federal Government. Each park is in charge of a superintendent and park wardens are on duty to protect the recreational areas, the wildlife and the forests from fire and other destructive forces, and to look after the safety of visitors.

While the National Parks preserve natural features of national importance, National Historic Parks and Sites preserve and identify the places important in the history of Canada. A site is declared of National historical significance by the Minister of Northern Affairs and National Resources on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board of historians representing all provinces. The 19 National Historic Parks are military or fur-trading forts that have been preserved, historic buildings or reconstructions of historic buildings. Most have museums associated with them. There are 591 historic monuments or plaques commemorating personages or events and 12 major National Historic Sites that are owned and operated by the National Parks Branch. In addition, there are 10 other major National Historic Sites owned by the National Parks Branch and leased to other organizations for maintenance and operation.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks				
Terra Nova.....	On Bonavista Bay, Newfoundland, 205 miles north of St. John's.	1957	153.0	Rocky headlands, wooded interior areas, off-shore and freshwater fishing. Serviced campground and cabin accommodation.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Fine bathing beaches. Hotel and cabin accommodation. Serviced campgrounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountainous background. Fine seascapes. Hotel and cabin accommodation. Serviced campgrounds.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Interesting rock formations on coast and rolling hills inland. Campground and cabin accommodation. Excellent naturalist service.
Georgian Bay Islands..	In Georgian Bay, 3 miles by water from Honey Harbour, Ont.	1929	5.4	Camping, canoeing, hiking, swimming, fishing and boating opportunities. Unusual geological formations on Flowerpot Island, off Tobermory on Midland Peninsula. Accessible by boat only.
Point Pelee.....	On Lake Erie near Leamington, in southwestern Ontario.	1918	6.0	Most southerly part of Canadian mainland. Fine bathing beaches. Unusual flora. Resting place for migrating birds. Campgrounds.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	260.0 (acres)	Mainland area and 14 islands with docks, campgrounds and picnic areas. Representative selection of the Thousand Islands. Islands accessible by boat only.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Woodland escarpment with fine lakes. Fishing, swimming, trail-riding, hiking and golfing. Visitor services in Wasagaming townsite. Campgrounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Fishing, swimming, boating and golfing. Marinas. Variety of visitor services at Waskesiu townsite.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Established	Area	Characteristics
			sq. miles	
National Parks—concluded				
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Best known and most popular of the National Parks. Magnificent scenery. Mineral hot springs. Resort facilities at Banff and Lake Louise. Skiing developments at Mount Norquay, Mount Whitehorn, Sunshine, Skoki and Temple. On Trans-Canada Highway.
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular picnic and day-use area. Cabin accommodation and serviced campground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs. Connected with Banff by scenic Banff-Jasper Highway. Accessible also by rail. Hotel and cabin accommodation and campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular parks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Glacier.....	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, hiking and camping. On Trans-Canada Highway. Visitor services at Rogers Pass.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Mountain-top plateau with rolling alpine meadow and picturesque tarns. No public access by vehicle to summit pending completion of road reconstruction.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Wood Buffalo ¹	Partly in Alberta, and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Largest National Park in world. Home of largest remaining herds of plains and wood bison and nesting ground of whooping crane. Accommodation at and access by boat and aircraft from Fort Smith, N.W.T.
National Historic Parks				
			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	2	222.0	Remaining earthworks of British fort built after 1758.

¹For footnotes, see end of table, p. 30.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			acres	
National Historic Parks—concluded				
Fort Anne.....	Annapolis Royal, N.S.....	1917	31.0	Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1940	13,000.0	Walled town built by French 1713-58 and demolished by British 1759. Being partially reconstructed. Archaeological investigations in progress.
Halifax Citadel.....	Halifax, N.S.....	1951	20.0	Fortress constructed in 1820's and in 1850's. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1940	20.5	Reconstruction of "Habitation"—first fort built in 1605 by Champlain and DeMonts.
Alexander Graham Bell	Baddeck, N.S.....	2	14.0	Museum containing mechanical and documentary records of research by the inventor.
Grand Pré.....	Grand Pré, N.S.....	1957	20.0	Commemorates the story of the Acadians and the New England Planters. Museum.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	81.3	Site of French fort erected in mid-1700's. Museum.
Fort Chambly.....	Chambly, Que.....	1940	2.5	Fort built by English in 1709-11. Museum.
Fort Lennox.....	Île aux Noix, Que., near St. Paul.	1940	210.0	Fort built by English in 1820's.
Fort Malden.....	Amherstburg, Ont.....	1940	5.0	Site of defence post built in 1797-99. Museums.
Fort Wellington.....	Prescott, Ont.....	1940	8.5	Military garrison 1812-66.
Woodside.....	Kitchener, Ont.....	1954	12.0	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales...	Northern Manitoba, near Churchill.	1940	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry.....	Manitoba, 20 miles north of Winnipeg.	1951	13.0	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battle- ford.	1951	36.7	North West Mounted Police post built in 1876. Museum.
Fort Langley.....	Fort Langley, B.C.....	2	11.0	Partially restored trading post founded 1827. Colony of British Columbia proclaimed here 1858.
Fort Rodd Hill.....	Esquimalt, B.C.....	1962	44.4	Extensive 19th century stone and concrete coastal fortifications.
Major National Historic Sites				
George Island.....	Halifax, N.S.....	2	--	Preserved harbour fortifications built in 1870's.
Fort Gaspereau.....	Near Port Elgin, N.B.....	2	20.0	Site of 1751 French fort.
Sir Wilfrid Laurier's Birthplace.	St. Lin, Que.....	1941	0.5	Period restoration relating to early life of a famous Prime Minister.

Subsection 2.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—There are 78.5 sq. miles of provincial parkland reservations in Newfoundland. Of this area, 26 sq. miles are at present being utilized for public recreation; the remaining 52.5 sq. miles are as yet undeveloped. The active provincial parks consist of three regional parks, each having an average area of 8 sq. miles and 18 roadside parks with camping and picnicking facilities, each comprising an area of approximately 100 acres.

Prince Edward Island.—Eighteen areas totalling 250 acres have been developed as provincial parks: Strathgartney Park, a 40-acre tract of land at Churchill on the Trans-Canada Highway between Charlottetown and Borden, is an excellent picnic site and camping ground with its hardwood groves, fresh spring water and beautiful view over West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the

shoreline where Lord Selkirk landed; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 13 acres under development at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres of land under development on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre. Several small parks have been developed or are under development. The parks are maintained by the Department of Industry and Natural Resources. A fee of \$1 a night is charged for trailer space and of 75 cents a night for tent space in all provincial parks.

Nova Scotia.—A master plan has been prepared of theoretically desirable park locations in Nova Scotia, taking into consideration the need for roadside facilities, regional picnic parks and camping grounds. Geographic location, population density, volume of traffic and aesthetic features are being evaluated for each site. Roadside table sites, formerly administered by the Department of Highways, are being incorporated into this provincial scheme and will be operated according to provincial park standards. Many of the existing sites will be retained and improved, some will be retained on a temporary basis only and unsuitable sites will be discontinued. The provincial parks program will require about ten years of development work for completion.

In 1964, the Department of Lands and Forests will operate nine camping and picnic parks, 24 picnic parks and 32 roadside table sites located throughout the province.

New Brunswick.—The Department of Lands and Mines is responsible for the development of the Provincial Parks System, which includes 15 regional park sites ranging in size from 25 to 200 acres, 17 picnic campsites and 23 roadside picnic sites. All picnic and camping grounds contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. Many of the regional park sites are associated with beach developments. Most sites are adjacent to or easily accessible from main trunk roads. No entrance fee is charged at any of the sites, but a daily camping fee of 75 cents to \$1.50 is in effect at 11 of the larger parks.

The Department maintains a Game Farm at Magnetic Hill near Moncton where various species of wildlife to be found in the province are displayed.

Quebec.—The Province of Quebec has established six provincial parks and 16 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, is 3,613 sq. miles in extent; Mont Tremblant Park, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, in the Gaspé Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Oka Provincial Park near Oka, 1.5 sq. miles.

Fish and Game Reserves together occupy 41,166 sq. miles.* The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John, have areas of 3,400, 5,200 and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 1,000 sq. miles. Adjoining Gaspesian Park in the Gaspé Peninsula, the Chic-Chocs, Matane and Joffre Reserves have, respectively, 325, 450 and 40 sq. miles. Also in Gaspé Peninsula are the Port Daniel, Rivière St. Jean and Rivière Petite Cascapédia Reserves for salmon and trout fishing, occupying 20, 13 and 300 sq. miles, respectively. Horton Reserve in Rimouski County has an area of 310 sq. miles.

* Excluded are the 16,000 sq. miles of the Mingan Reserve, no longer operated by the Department of Tourism, Game and Fish as a reserve.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Oka Provincial Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is easily reached in summer by highway from Montreal and is very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in the parks and reserves, except Horton, Joffre, Kipawa and James Bay; in the latter only moose are protected.

Ontario.—The development of provincial park lands in Ontario continues at a rapid rate. Ten years ago there were 10 provincial parks in the province and today there are 86 such parks available for public use. Several new parks are in process of development and 47 other areas are reserved for future development. The total area in the Ontario Provincial Parks system is about 5,500 sq. miles.

The four largest provincial parks—Algonquin, Quetico, Lake Superior and Sibley—together have an area of about 5,200 sq. miles. Algonquin, 180 miles north of Toronto and 105 miles west of Ottawa, has several campgrounds which are accessible by car from Highway 60 and its numerous waterways may be traversed and enjoyed by canoe. Quetico Park is accessible by road at the Dawson Trail Campground on French Lake, and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. Under the Wilderness Areas Act, which came into effect in 1959, 37 areas have been established. These tracts of land, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historic, scientific, aesthetic or cultural values. The largest is a 225-sq. mile area of treeless tundra in the northeastern tip of the province, jutting out at the base of Hudson Bay where it meets James Bay. All the other areas are small and none exceeds 640 acres.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance reached an all-time high of 8,526,443 in 1963; 2,372,223 motor vehicles entered the parks and campers numbered 840,000. There are small charges made for entry of automobiles and overnight camping. At supervised campsites for tents and trailers, picnic tables, fireplaces, tested drinking water and washrooms are provided. Campsites, which are being added to at the rate of 500 to 2,000 a year, numbered 14,500 across the province in 1963 and in that year about 300,000 permits were issued for the use of them. Adding to the visitor's stay in provincial parks are the Naturalist Service and Interpretative Programmes which include nature museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails. Interpretative programmes were conducted at eleven parks in 1963.

The park lands of Ontario are administered by the Parks Branch of the Department of Lands and Forests, Parliament Buildings, Toronto, from which detailed information in booklet form is available.

Manitoba.—In Manitoba there are six provincial parks totalling 2,742 sq. miles in area. Of this park area, 1,855 sq. miles are also within forest reserves so that forest reserve and provincial park lands are in many cases one and the same. In addition, there are 40 established provincial recreation areas ranging in size from 2½ acres to 2,000 acres and having a total area of 7.5 sq. miles, as well as 78 roadside parks along the main highways of the province. The park and recreation areas are administered by the Parks Branch of the Department of Mines and Natural Resources; the forest reserves are operated and managed by the Forest Management Branch and are protected by the Forest Protection Branch of the same Department.

Saskatchewan.—Saskatchewan has 14 provincial parks with a total area of 2,284 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake and Moose Mountain are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camp and picnic facilities. The other parks have trailer sites and camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are plentiful and brook and other trout have been stocked in streams and lakes. Heavy stands of tall straight lodgepole pine and white spruce provide a unique forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common, as well as several varieties of grouse and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks—LaRonge, Nipawin and Meadow Lake—offer wilderness-style canoe routes and 'fly-in' commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites are being developed or are in use.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, where picnic facilities are available.

Alberta.—In Alberta, 42 provincial parks have been established, with a total area of approximately 140 sq. miles and, of these, 38 are under development. Cypress Hills Provincial Park with an area of 77 sq. miles is the largest and is situated in the southeast portion of the province. Other parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Taber, Thunder Lake, The Vermilion, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford and Writing-on-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 2,500,000 tourists and vacationists in 1963.

In addition to the recreational parks, 18 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham House, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill and Rev. George McDougall's Death Site.

Provided also for Albertans are the Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. The Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White Goat Wilderness 489 sq. miles. These areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

British Columbia.—There are 216 (170 developed) provincial parks in British Columbia with a total area of about 9,981 sq. miles. These parks are classified as A, B and C. Class A parks are reserved solely for recreational purposes; some are highly developed and others are wilderness areas. Class B parks are set aside primarily for recreation, but regulations permit other natural resource use where this is not in conflict

with recreation. Class C parks are administered in detail by a Parks Board of local citizens, under the over-all jurisdiction of the Minister of the Department of Recreation and Conservation. British Columbia parks are in many stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park. Outstanding scenic and mountain reserves include Garibaldi, Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists—the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored to become the first Provincial Historic Park. Six marine parks with mooring facilities and campsites have been developed on the islands of the Straits of Georgia for the benefit of water-borne vacationists. The popularity of the province's parks, with their integrated campsites and picnic areas, is attested by the fact that about 4,000,000 persons visited them during 1963; about one quarter of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Alouette Lake Parks were the most popular.

Subsection 3.—Canada's National Capital*

Ottawa, the city selected by Queen Victoria in 1857 to be the seat of government for the Province of Canada in British North America, was designated the National Capital upon Confederation on July 1, 1867. The community had grown out of the military and construction camp that served as headquarters for the building of the Rideau Canal, a project carried out between 1826 and 1832 to establish a safe navigable waterway between Lake Ontario and the Ottawa River. The building of the Canal was the crowning achievement in the life of a distinguished British military engineer, Lieutenant-Colonel John By, R.E., who gave his name to the new settlement inhabited mainly by stone-masons and discharged soldiers. As time passed, Bytown prospered as a timber centre and was incorporated as a town in 1847. Then, on Dec. 18, 1854, the name of Bytown was changed to Ottawa and under that name the community was incorporated as a city on Jan. 1, 1855.

The city, situated in an area of great natural beauty and surrounded by waterways, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of a comprehensive plan. However, in 1950 a Master Plan was presented to the Government of Canada, designed to guide the development of the Capital's urban area over the following half-century and to protect the beauty of the surrounding National Capital Region. This Region originally covered 900 sq. miles but was increased in 1959 to 1,800 sq. miles—half in the Province of Ontario and half in the Province of Quebec. Although the successful implementation of the Plan is dependent upon the co-operation of the cities of Ottawa, Hull and Eastview and of about sixty other autonomous municipalities and the two provincial governments involved, the National Capital Plan is not officially recognized by the Governments of Ontario and Quebec.

The federal agency responsible for the planning of Canada's Capital is the National Capital Commission, created in 1959 to replace the Federal District Commission which, in turn, was the lineal descendant of the Ottawa Improvement Commission. The National Capital Commission, which reports to Parliament through the Minister of Public Works, is composed of twenty members appointed by the Governor in Council and representing each of Canada's ten provinces. It is headed by a chairman and a general manager and has a personnel of over 700, although this number fluctuates because of the seasonal character of a large part of the work involved. Six committees give advice and direction to the Commission: the *Executive Committee* consists of the chairman and vice-chairman of the Commission and three other members appointed by the Commission, one of whom

* Prepared in the Information and Historical Division, National Capital Commission, Ottawa.

is from the Province of Quebec; the *Land Committee*, composed of several experts in land evaluation, advises the Commission on matters of land purchases and property administration; the *Advisory Committee on Design*, comprising prominent Canadian architects, town planners and landscape architects, gives advice on the external appearance of government buildings, locations, site plans and landscape designs; the *Historical Advisory Committee* advises the Commission on matters of preservation, marking and interpretation of buildings and sites having historical significance within the National Capital Region; the *Information Advisory Committee* studies and considers the publicity and public relations activities of the Commission, and carries out an extensive program of historical research and preservation; and the *Gatineau Park Advisory Committee* is concerned with the administration and development of Gatineau Park.

The National Capital Plan, as conceived by the eminent French town planner, the late Jacques Gréber, was dedicated to those who gave their lives for Canada during the Second World War and has since constituted the Commission's planning guide for the Capital of Canada. In accordance with the first proposal of the Master Plan, the principle of "open space" is being applied, a policy beneficial to both residents and visitors. Part of this policy involves the restoration to their natural beauty of the shores of the waterways in and around Ottawa, a program evident in the work of the Commission at Rideau Falls Park opposite the City Hall and in the development of Vincent Massey Park in the heart of the city; the latter is a 75-acre park and playground extension to 50-acre Hog's Back Park at the foot of Hog's Back Falls. The Commission owns 40 miles of riverfront property in the National Capital and makes these attractive areas accessible to the public. On the Quebec side of the Ottawa River the Commission maintains two parks—the historically interesting Brébeuf Park and Jacques Cartier Park, both on the shores of the Ottawa River. There are at present 40 miles of wide landscaped roadways in Ottawa and Hull, and 30 miles of right-of-way have been acquired for future expansion. The Commission cares for the landscaping of 13 municipal parks in Ottawa-Hull, of which Strathcona Park in Sandy Hill district and Rockcliffe Park are the most extensive and attractive. The acquisition of land along both shores of the Ottawa and Rideau Rivers and the exceptionally wide rights-of-way for parkways have given Ottawa about 4,000 acres of open space.

The program of planned location of new government buildings has been under way for some time and excellent examples of planned sites for government structures now exist at Confederation Heights, at Tunney's Pasture and at the Printing Bureau site in Hull. Other areas, such as the large tract of already serviced land at Pinecrest, are awaiting development. The grounds of more than 140 government buildings in the National Capital Region are cared for by the Commission, which also gives assistance to municipal projects that enhance the attractiveness of the area, such as the provision of land and landscaping for the 10-mile Queensway being built under a four-way partnership between the Federal Government, the National Capital Commission, the Province of Ontario and the City of Ottawa.

An important proposal of the Master Plan calls for the establishment of a Greenbelt around the National Capital, one of the main objectives of which is to restrain the tentacular and uneconomical growth of the city. There is also the aesthetic consideration that this belt of green open space and planned building sites will provide the beautified Capital with suitable approaches. The present semicircular Greenbelt on the Ontario side occupies 41,000 acres of land and surrounds, to a depth of about two and one half miles, the urban zone at an average distance of nine miles from the Peace Tower. The Commission encourages agricultural activity within this area and at the same time reserves within its boundaries certain tracts of land to be occupied by government buildings, public institutions and some types of industrial development such as research and experimentation establishments requiring considerable space to operate. There are many other factors that help make the Ottawa Greenbelt an ideal planning measure: it allows some control over the demographic increase of the Capital; it is an incentive for better urban land use; and it favours the development of satellite communities in the National Capital Region.

The Commission has under way the large-scale program advocated in the Master Plan of removing railway trackage and yards from the urban area with the co-operation of the railway companies. The abandoned rights-of-way are destined to become roadways which will relieve traffic bottlenecks within the heart of the city; the Queensway, still under construction, runs on a former railway bed. This program, which is expected to be completed by 1965, involves the removal of 32 miles of track, the elimination of 72 railway crossings and the consequent acquisition of 449 acres of high-value land for re-development.

The Master Plan also includes the establishment and development of the beautiful and impressive Gatineau Park, an 80,000-acre forest and lake area in the shape of a triangle stretching from its apex in the city of Hull northwestward for 35 miles into the Laurentian Hills. The National Capital Commission owns more than 63,000 acres of the projected area and the acquisition of private holdings is continuing. The 22 miles of parkway now traversing this area are to be extended deeper into the wilderness. Camping and picnic sites are being improved by the installation of drinking fountains, barbecues and outdoor ovens, and well-designed restrooms, and by the addition of fishing and swimming facilities. At Lac Philippe and Lac Lapéche, two of the four big lakes in Gatineau Park, the Commission has developed or is planning large-scale public recreation facilities with easy road access.

In addition to these major development projects, the National Capital Commission, through its Historical Advisory Committee, plans to conserve and mark historic buildings and sites as mementoes of the past. Such sites are carefully studied and their preservation and suitable identification is an important part of the over-all program.

Planning aid to municipalities in the National Capital Region is given in the form of grants in special circumstances and advice on establishing areas of subdivision control, preparation of basic plans and maps, master plans for communities and zoning legislation. This advice is available upon request and the Commission, having no planning powers, must seek to persuade rather than impose its proposals.

Estimated expenditures for Commission projects in the year ended Mar. 31, 1964 totalled \$28,040,000, which included \$8,178,000 for administration, operation and maintenance and \$19,862,000 for capital projects and assistance to municipalities.

Section 2.—Wildlife Resources and Conservation*

Wildlife in Canada is an important renewable natural resource. In the early days, wildlife was, and in large areas still is, a form of sustenance in the hinterland and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, a number of mammals and birds became seriously depleted or completely extinct. The passenger pigeon, the great auk and the Labrador duck were extirpated, the buffalo vanished from the prairies, and wapiti, prong horn antelope and muskoxen were reduced to small fractions of their former numbers. The destruction was not limited to birds and mammals but in areas of settlement their habitat was reduced by the cutting and burning of the forests, the diversion and pollution of streams and other changes in the land.

Since then it may be said that wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment for wildlife. The Arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent sub-arctic and sub-alpine non-commercial forests have been changed principally as a result of increased human travel causing more forest fires; the great forest farther south has not lost its real character through being managed for commercial use; cultivable lands, whether originally forest or grassland, have completely changed, but often they and the managed forest are better for many forms of wildlife than the original

* A series of special articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. See the list of special articles in Chapter XXVIII, Part II, under the heading of "Fauna and Flora".

wilderness. Some creatures thrive on change. There are more moose, deer, ruffed grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forests, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, mountain sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1885 pioneer conservationists were instrumental in establishing Banff Park in Alberta and in 1887 a bird sanctuary, the first on the Continent, was established at Last Mountain Lake in Saskatchewan. The same fervour for preservation of Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts, which, for a long time, took the form of protection of certain species from destruction by man or predator. Better knowledge of nature's operations and the recognition of the fact that many other factors combine to cause fluctuation in wildlife numbers are now being reflected in a loosening of restrictions on hunting and a rescinding of preserves. The science of animal numbers is new and sometimes runs counter to popular prejudice. But it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Wildlife must never be separated from the consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the administration of the respective provincial governments; wildlife on federal lands and certain problems of national or international interest are the concern of the Federal Government.

The Canadian Wildlife Service.—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the National Parks Branch of the Department of Northern Affairs and National Resources. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management, and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for numerous species of birds that migrate between the two countries. The Canadian Wildlife Service, in its capacity as administrator of the Act, is responsible for recommending the annual revision of the Migratory Bird Regulations, which govern such matters as open

seasons and other waterfowl hunting details, taking and possessing migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Act and Regulations thereunder are enforced by the Royal Canadian Mounted Police and in both administration and enforcement co-operation is received from provincial authorities. There are 106 migratory bird sanctuaries in Canada, having a total area of 39,687 sq. miles. A sanctuary may be established on the initiative of the Department of Northern Affairs and National Resources or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

Many research projects under way were continued during 1963. These included the study, in co-operation with the governments of Manitoba and Saskatchewan and the Council of the Northwest Territories, of barren-ground caribou and of wolves that prey upon caribou. Human utilization is still the most important factor in herd reduction but other significant factors include effects of forest fires on winter range, predation, accidents and poor calf survival. Studies were continued on mink, muskrat and beaver in the Mackenzie District, and of polar bear and white fox in Keewatin and Franklin Districts. Big game mammals in the National Parks were also the object of continued study, special attention being given to mountain sheep and wapiti in the mountain parks of Alberta where large populations of those species facilitate investigations, and to the competition for food between wapiti and the livestock still allowed to graze in Riding Mountain Park in Manitoba. In Wood Buffalo Park, investigations into the problems of disease and low reproductive rates among bison were continued as a long-term project in the hope that some control of each might be achieved. A second outbreak of anthrax in bison outside the Park was dealt with and studies were initiated on the epizootology of the disease.

Damage to cereal crops by wild ducks and sandhill cranes continued to receive intensive study and much time was devoted to other species greatly reduced in number or in danger of extinction, such as the Ross' goose, trumpeter swan and whooping crane. Nation-wide investigations of migratory waterfowl included kill surveys conducted in Prince Edward Island, New Brunswick, Quebec and Ontario and a crop-damage survey in Saskatchewan. Arctic bird-banding programs were continued.

At the end of 1963 the research staff included 44 wildlife biologists stationed at various centres throughout Canada. Ornithologists were located at Vancouver, B.C., Edmonton, Alta., Saskatoon, Sask., Winnipeg, Man., Ottawa and Aurora, Ont., Quebec, Que., Sackville, N.B., and St. John's, Nfld. Mammalogists were stationed in the Northwest Territories at Fort Smith and Inuvik, at Whitehorse in the Yukon Territory, and at Edmonton, Sackville and Ottawa. A limnologist was located at Jasper and a range specialist and two pathologists at Edmonton and Ottawa, respectively. A number of university graduates and undergraduates are engaged annually to assist in summer field work. Ottawa headquarters has an administrative staff of about 30 in addition to supervisory research officers, and about 25 part-time migratory bird wardens and sanctuary caretakers are employed.

Provincial Government Wildlife Conservation Measures.—As stated previously, each province has jurisdiction over its own wildlife resources. The measures adopted by the respective provincial governments to conserve these resources are outlined in the 1963-64 Year Book at pp. 46-52. The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate*

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are not unique but are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F. or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

* Prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A very brief outline of the climate of Canada by region is given in the 1962 edition, pp. 39-40.

Section 2.—Meteorological Observing Stations in Canada*

In January 1964, official meteorological observations were taken and recorded at some 2,230 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 241 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 35 stations are operated in a similar manner by the different Armed Services; 70 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, mainly by various transportation and communications companies.

Twice daily at 36 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving station; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 26 other locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

About 1,268 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

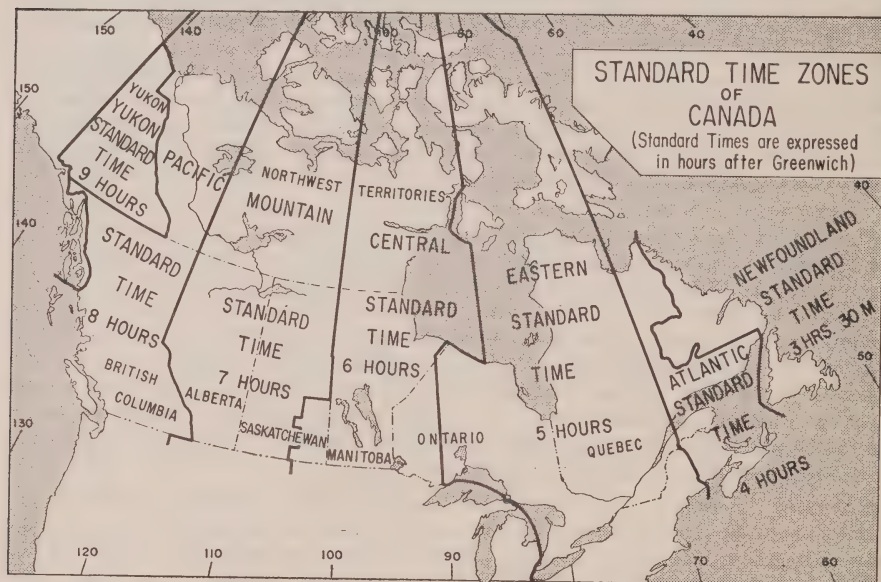

There are about 605 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 83 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at a rate of more than 50 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

* Prepared by the Meteorological Branch, Department of Transport, Toronto.

Section 3.—Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed

at the end of that year. Since that date, however, most cities and towns have adopted daylight saving for varying periods in the summer months. Several provinces have recently placed legislation on their statute books making daylight saving time mandatory, either throughout the province or in certain areas. However, Saskatchewan operates on central standard time the year round and Alberta passed a Daylight Saving Time Act applying to the summer of 1964 (SA 1964, c. 18) prohibiting the use of daylight saving time in the province, except in certain cases.

PART IV.—GEOPHYSICS AND ASTRONOMY

Section 1.—Geophysics*

Geophysics is the study of the earth, including the oceans and atmosphere, by the methods of physics. Because it extends over such a very wide range of topics, it is generally divided into seven fields, each a well developed science in itself. Of these, one of the oldest is geodesy, the study of the earth's shape, and of variations in the gravitational attraction of the earth, which are related to the shape. Seismology originally was the study of earthquakes but it now includes investigations of the earth's interior by means of vibrational waves, which may be produced by explosions as well as by earthquakes. Meteorology deals with the atmosphere, and hydrology deals with the surface waters of the earth, excluding the oceans but including ice and snow. The study of the oceans, their currents and bottom profiles, forms a subject in itself—oceanography. Geomagnetism is involved with the earth's magnetic field and with many related phenomena, such as the ionosphere and the radiation belts that surround the earth. Finally, volcanology is the study not only of existing volcanoes but of volcanoes of the past and of the rocks they produced.

The seven fields all deal with the investigation of some major property of the earth. They may be considered as pure sciences but it is apparent that they all have applications that are vital to modern life. The findings of geodesy on the precise shape of the earth are needed for accurate maps. The search for minerals and oil by scientific methods makes use of the techniques of gravity measurements, seismology and geomagnetism. Meteorology obviously has great practical importance, and the contributions of hydrology to water supply problems and of oceanography to the fisheries are also very large. The following paragraphs cover 1963 activities in the different fields of geophysics.

The Geodetic Survey, Department of Mines and Technical Surveys, extended its network of triangulation, which provides, very accurately, the positions of points on the earth, to Coppermine on the Arctic coast, to Chesterfield Inlet on Hudson Bay, and to near Fort Chimo in northern Quebec. Precise levelling was continued in several provinces, and, in some areas, significant changes in level of the land surface from the time of previous surveys were indicated. The most important of these was in the Lake St. John area of Quebec, where an uplift of one foot in forty years has taken place. Measurements of gravity, which provide information on both the earth's shape and on geological structures, were made by the Dominion Observatory, Department of Mines and Technical Surveys, and by university and commercial groups. The Dominion Observatory work included a survey of a large area in northern Ontario, using helicopter transport, as well as measurements in the Gulf of St. Lawrence, using an instrument lowered to the bottom from ships. The Bedford Institute of Oceanography, Department of Mines and Technical Surveys, conducted extensive tests on gravity meters suitable for use on ships at sea.

The network of seismological stations in Canada, operated by the Dominion Observatory, was extended to include 19 stations, with four more under construction. Some of these stations are on or near university campuses, and are operated in co-operation with university departments. The network is sufficiently extensive and well equipped to

* This submission, prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto, covers all Canadian activity in the field of geophysics. The surveying and mapping activities of the federal Department of Mines and Technical Surveys, of necessity included here, are also covered in different form in the article on pp. 17-24.

detect local earthquakes in virtually any part of Canada, and also to constitute a major contribution to the international study of earthquakes on a world-wide scale. Studies of the earth's crust using the waves from artificial explosions were carried out in several places. An extensive program, conducted by government and university scientists in co-operation with groups from the United States, involved the detection of waves from charges placed on the bottom of Lake Superior. The results of this program, when the calculations have been completed, should provide one of the most detailed pictures of the geological nature of the earth's crust ever achieved. Other crustal studies were conducted in the Canadian Arctic by the Polar Continental Shelf group of the Department of Mines and Technical Surveys, and in British Columbia, Alberta, Manitoba and Nova Scotia by universities.

The study of the earth's atmosphere (meteorology) involves the Meteorological Branch, Department of Transport, and university groups such as the Department of Meteorology, McGill University, and the Department of Physics, University of Toronto. The forecasting operations of the Meteorological Branch are well-known, but important research is also carried out. This research involves the use of modern measuring equipment, such as radar, and also high-speed computing techniques. Canada has areas in which particular meteorological conditions constitute serious problems. One of these is the hail belt of the western prairies, and groups from McGill University, the University of Toronto and the Alberta Research Council are investigating the causes of hail storms and the possibilities of weather modification.

In many parts of the world, the supply of fresh water has become a critical problem. Canada is relatively well supplied with this natural resource, but in some areas of the country the supply must be carefully watched. Many groups from federal and provincial government departments are concerned with hydrology, which is the study of the earth's fresh waters. The Water Resources Branch, Department of Northern Affairs and National Resources, conducts a survey of water resources on a national scale. Other groups study the water cycle, including precipitation, snowmelt, runoff and groundwater movements, in local watersheds. The Geological Survey of Canada and some provincial agencies are studying seismological and other geophysical methods of locating buried stream channels. In view of the extensive work in hydrology in progress, it is appropriate that Canadian hydrologists have made plans to participate in the International Hydrological Decade, a ten-year study of the world's resources of water.

The study of glaciers is rather closely related to hydrology, since glacial ice is one form in which water is available as a natural resource. In addition, glaciers are very sensitive indicators of climate, and measurements of glacial advances and retreats provide information on climatic change. The Geographical Branch, Department of Mines and Technical Surveys, is preparing an inventory of Canadian glaciers, based chiefly on aerial photographs. Investigations in the field were conducted in recent seasons in the Rocky Mountains, Monashee Mountains and Icefield Ranges of Western Canada; in central Labrador; and on Baffin Island and the Queen Elizabeth Islands of the Canadian Arctic. Field work includes geophysical measurements of ice thickness, precise surveys to determine the rate of ice flow, and measurements of accumulation and melting. The Defence Research Board established a field station at the head of Tanquary Fiord (latitude $81^{\circ}25'N$, longitude $76^{\circ}55'W$) for its studies of northern Ellesmere Island.

Measurements of the earth's magnetic field, and of its changes with time, are important for a number of reasons. In earlier years, the use of the magnetic compass for navigation required accurate measurements of the declination. This is still a consideration but more important today is the use of magnetic measurements for detection of mineral deposits, and the study of changes in the magnetic field produced by charged particles from the sun. The general mapping of the earth's magnetism over Canada by both ground and airborne measurements is the responsibility of the Dominion Observatory. The Geological Survey of Canada, in part with the co-operation of provincial governments, conducts airborne magnetic surveys for geological purposes, including the indication of favourable areas for prospectors. During 1963, the Survey produced 140 sheets of aeromagnetic maps (scale

1 inch to 1 mile) from its own surveys, and shared with provincial governments in the production, by contract, of 437 sheets. The amount of information, of value to all persons studying the geology and mineral deposits in the areas covered, that has been made available to the public is very great. Studies of magnetic effects in the ionosphere and space have become increasingly important in Canada. The *Alouette* satellite, launched in 1962, continued to provide a very great amount of useful information on the ionosphere. The *Alouette*, or 'topside sounder' of the ionosphere, transmitted to earth 2,060 hours of data from measurements made by the instruments it carried. The rocket-launching range at Churchill, Man., was used by a number of groups to send instrument-carrying rockets aloft, including one prepared by the University of Saskatchewan. Research on ionospheric conditions as related to radio communication problems was continued by the Defence Research Board. McGill University scientists investigated the use of missiles launched from guns to send instruments into the upper atmosphere.

Oceanographic measurements were extended in both the Atlantic and Pacific Oceans, and similar work was carried out in the Great Lakes by the Great Lakes Institute, University of Toronto. Work in the oceans was conducted by the Bedford Institute of Oceanography, Department of Mines and Technical Surveys, and by Oceanographic Institutes at Dalhousie University and the University of Toronto. The measurements made by these groups include not only water depth, temperature, salinity and currents, but also geophysical studies of the crust beneath the oceans, by seismological, gravimetric and magnetic methods. The ship resources for Canadian oceanography were greatly strengthened by the construction during 1963 of the CSS *Hudson*, a modern research vessel. In addition, the Minister of Mines and Technical Surveys announced that twelve survey and research ships would be built during the next five years. These ships, operated by the Canadian Coast Guard, must operate at times under the most difficult conditions. The CCGS *Labrador*, for example, encountered the worst ice conditions on record when, in 1963, she pushed into Kennedy Channel between Ellesmere Island and Greenland.

The use of geophysical methods in the exploration for petroleum and minerals showed an increase during the year, and there was an increased demand for students with degrees in the subject. Teaching and research in geophysics was started in additional universities, so that virtually all Canadian universities now have some activity in the field. The activity of this country in geophysics was recognized when the Geophysics Laboratory of the University of Toronto was accepted as the principal office and headquarters of the International Union of Geodesy and Geophysics.

Section 2.—Astronomy

There has been in Canada, as elsewhere in the world, an upsurge of popular interest in astronomy, due no doubt to the achievements in space science. This subject was last covered in detail in the 1956 Year Book, pp. 49-55; the following special article indicates the advances made since that time in astronomical research and educational facilities in Canada.

ASTRONOMY IN CANADA*

Astronomy in Canada is currently an expanding science pursued with vigour at various institutions devoted to astronomical research and education. Its early history is closely related to the demand for accurate positions on the earth, for the problem of establishing longitudes in Canada was once acute because of the difficulty in transporting accurate time across the Atlantic Ocean. The early Jesuits in Quebec were interested in solar eclipse observations as an aid to longitude determination and records exist showing that they observed partial solar eclipses as early as 1670. Their records also describe observations of several bright comets observed from Quebec City.

* Prepared from material supplied by the various institutions and edited by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

The first astronomical observatory in Canada was founded at Fredericton, N.B., in 1851 with latitude and longitude determinations the prime incentive in the early years. Other small observatories followed—at Quebec City in 1854, at Kingston in 1875 and at McGill University in 1879.

Modern astronomical research in Canada is concentrated in certain federal agencies and in universities. The Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C., comprise a Branch of the Department of Mines and Technical Surveys. The National Research Council is active in the field of radio astronomy through its Division of Radio and Electrical Engineering. The David Dunlap Observatory of the University of Toronto is a centre for astronomical research as well as for the teaching of astronomy in the University's Department of Astronomy. All of these institutions are equipped with major observing instruments. Other universities with less extensive research facilities in astronomy include Queen's University and the University of Western Ontario.

The Dominion Observatory.—The early history of the Dominion Observatory dates back to 1885 when the first modern longitude surveys were begun in order to define certain tracts of land involved in railway construction in British Columbia. This eventually led to the establishment of the Dominion Observatory on its present site in Ottawa in 1905. Research in positional astronomy and in the new field of astrophysics became important functions of the Observatory while geodetic surveying was separated from the Observatory and became part of another Branch in 1917. In addition to its work in astronomy, the Dominion Observatory has three Divisions engaged in research in geophysics (see pp. 22-23).

Apart from research work, the Observatory performs an educational service to the public. Saturday evenings from April to October, inclusive, are set aside for this purpose and visitors are given an opportunity to view celestial objects through the 15-inch telescope and to learn something about the operation of the Observatory and its research. During the remainder of the year groups may visit the Observatory at pre-arranged times.

Positional Astronomy and Time Service.—Determination of the precise positions and proper motions of the stars, although less spectacular than some other aspects of astronomy, is nevertheless one of the foundations of the science and an important task of most national observatories. Observation is made of the time at which a star crosses the meridian and of its angular distance from the equator. The minute change in these values with passing years is the proper motion of the star. Results from many observatories are incorporated into star catalogues used internationally for navigation, surveying, time-keeping and the optical tracking of artificial satellites.

The Observatory now uses a mirror transit instrument for fundamental positional work. A plane mirror with an attached graduated circle is pivoted on an east-west axis. The mirror reflects light from a star on the meridian into either one of two fixed 10-inch aperture horizontal telescopes which lie on a north-south line facing in toward the mirror. The transit of the star and the position of the circle are recorded photographically by remote control.

Provision of a national standard of time is another basic function of the Dominion Observatory. Although a meridian circle can determine time, since 1952 astronomical observations for time have been carried out with a special instrument, the photographic zenith tube. Light from a star near the zenith enters the 10-inch lens of the telescope, goes down the tube to the horizontal surface of a pool of mercury in a basin and is reflected back to a photographic plate in the focus just below the lens. The plate follows the moving image of the star for 20 seconds and records the image as a small dot; the motion is accurately timed by a clock. Lens and plate are then rotated 180 degrees about the vertical and another exposure made. Repetition of the cycle leaves a pattern of four images

of the star on the plate; measurement of the size and shape of the pattern gives the correction to the clock time and the latitude of the observatory. A program employing automatic telescope operation is carried out from dusk to dawn throughout the year on a selected list of stars passing nearly overhead at Ottawa. This gives the time to an accuracy of a few thousandths of a second, and latitude to a few hundredths of a second of arc on any one night.

The time so determined is then disseminated throughout the country by wire and radio. Seconds' pulses with a bilingual voice announcement every minute are available continuously over the Dominion Observatory's short-wave station CHU. These meet the needs of aerial and marine navigation and surveying, and also of many scientific laboratories for whom the radio link is adequate. Direct wire provides accurate time and frequency to local government and private laboratories, to the railway telegraph offices, to the Parliament Buildings, and to the CBC for the control of the 1:00 P.M. signal.

Stellar Physics.—The Stellar Physics Division concentrates its research activities in three particular fields of astronomical research—solar physics, radio astronomy and meteor astronomy—each of which employs highly specialized instruments and techniques. Only the solar research program retains a close connection to the name of the Division, since the study of distant stars, once based on observations made with the 15-inch refractor in Ottawa, is now pursued at the Dominion Astrophysical Observatory using the much greater light-gathering power of its reflecting telescopes.

A large solar telescope is used in Ottawa to form an image of the sun about 10 inches in diameter. Any area on the visible hemisphere may then be selected for detailed study. The light is fed into a large grating spectrograph so that the solar spectrum may be recorded in any region from the ultraviolet through the visible and far into the infrared. Studies of the composition, temperature and atmospheric motions in the sun may be conducted in this manner. A smaller optical system is used with an interference filter to photograph the sun in the light emitted by hydrogen atoms. This technique is used to detect solar flares and other transient phenomena in the solar atmosphere. The flare patrol is operated each clear day, photographs of the sun being taken more frequently than once per minute. The importance of magnetic fields in controlling certain phenomena related to sunspots and flares has become more evident in recent years. An adaptation of the solar spectrograph to produce maps showing the strength of solar magnetic fields is nearing completion.

A total eclipse of the sun provides an opportunity to study the tenuous outer atmosphere or corona of the sun which cannot be observed from the earth at other times. In recent years high-flying aircraft have been employed for the study of such eclipses. Observations of the brightness and temperature of the corona were secured from a large RCAF aircraft flying over the Northwest Territories in July 1963.

The study of the emission of radio waves by astronomical sources, known as radio astronomy, has recently become a major branch of astronomical research. It provides valuable data of a kind not obtainable with optical telescopes. The Dominion Radio Astrophysical Observatory is located about 15 miles south of Penticton, B.C., and was opened in 1960 as a part of the Stellar Physics Division.

A parabolic reflector 84 feet in diameter is used primarily for studies of the structure of the Milky Way star system and particularly for detailed mapping of the neutral hydrogen gas which frequently is found in large clouds in interstellar space. In this program, high-frequency radiation near 1,400 megacycles per second is observed. To study the distribution of energy within the radio spectrum, observations at much lower frequencies are also required. For this work a different type of antenna system must be used and a large array of aerials has been constructed. The array is in the shape of a "T" in which the crossbar is four fifths of a mile in length. It operates at 22 megacycles per second while a second array, operating at 10 megacycles per second, will take advantage of the conditions of low radio interference expected near the time of minimum solar activity.

Two meteor field stations operated in northern Alberta are known as the Meanook and Newbrook Meteor Observatories. Each observatory is equipped with a Super-Schmidt meteor camera for the photography of meteor trails. The results are used to study both the upper atmosphere through which the meteor passes and the meteors themselves. Data on the orbits of the particles in the solar system prior to their collision with the earth are obtained. About 20 meteor spectrographs are also in use to obtain photographic spectra of meteors from which data on the composition of the meteor particles and the method in which they react with the atmosphere are derived.

The Dominion Observatory is interested in the related subject of meteorites. In this field, the astronomical and geophysical divisions have co-operated in an intensive study of ancient Canadian craters which appear to be originated by the impact of huge meteorites. This program followed the identification in 1952 of the New Quebec (Chubb) Crater as an old meteorite crater. About a dozen such craters are now recognized in Canada, ranging from one to 40 miles in diameter. Some are at least several hundred million years old. The most important support for a meteoritic origin has come from diamond drilling operations in which core is recovered from beneath the crater. This may then be studied for alterations caused by the great pressure and heat created at the moment of impact. Results of drilling operations have supported a meteoritic origin for the following craters: Brent and Holleford, Ont.; Deep Ray, Sask.; and East and West Clearwater Lakes, Que. Further studies of these and other features are planned. With the current progress in studies of the moon's surface, this study of terrestrial meteorite craters has assumed increasing importance.

The Dominion Astrophysical Observatory

The Dominion Astrophysical Observatory at Victoria, B.C., is concerned with observations of the quantity and nature of the light radiations received from the stars and other celestial bodies. The interpretation of these observations assists in the understanding of the structure, both of the stars themselves and of the Milky Way system which they form and of which the sun and its planets are a part. From the earth, all the stars appear very faint, and it is necessary to collect as much of their light as possible in order to make useful observations.

The principal telescope of the Observatory is the 72-inch reflecting telescope to which is attached a spectrograph which analyses the starlight into its constituent colours and photographs the pattern, or *spectrum*, thus produced. In 1962 a 48-inch reflector was brought into use, together with an associated spectrograph which uses the starlight it receives much more efficiently, thus compensating to some extent for the smaller size of its telescope. The 48-inch telescope is also used for photoelectric *photometry*—the precise measurement of the apparent brightnesses and colours of the stars with the aid of a photoelectric cell. In 1963 a 16-inch telescope, which will in future be used for photometry, was presented to the Observatory.

Analysis of starlight with a spectrograph permits detailed study of many properties of the stars which would otherwise remain unknown. An example is the speed of a star along the line of sight. If the speeds of large numbers of stars, whose distances are known, are determined, the structure and dynamics of the Milky Way system can be studied. Distances of stars can be estimated from their spectra, provided the results of accurate photometry are available for the same stars. A major program of this kind, representing some twenty years of observational effort, has been completed recently. In accordance with normal scientific practice, the results of this and other investigations are published and sent to astronomers throughout the world.

The study of a star's spectrum also leads to a knowledge of the chemical composition of the star. Each chemical element removes light of certain definite and well-known colours from the total light of a star, leaving a dark line across the spectrum. The lines of a given element can appear in a spectrum only if that element is present in the star. Other factors, however, determine which of the elements actually present will affect the

spectrum. Precise chemical analysis must take account of the differences of temperature and pressure in the atmospheres of different stars. The outer layers of the stars may appear to differ widely, but this is because of differences in their physical state. It is found that the majority of stars are of closely similar chemical composition. Studies of this nature depend on knowledge of the behaviour of matter in laboratories on earth. On the other hand, the stars themselves are a unique kind of laboratory where matter exists, and can be studied, under conditions that cannot be reproduced on earth. Thus some branches of astronomy, physics and chemistry complement each other.

Another important part of the Observatory's work is the study of close double stars. These are systems of two stars held together by their gravitational attraction. Under the influence of this attraction they revolve around their centre of gravity, completing a revolution in a very short time—usually a few days. The two stars are too close to each other to be seen separately with any telescope but they can be studied separately with the spectrograph. These objects are important because their motions are determined by the well-known law of gravitation, and can be made to yield much information about the component stars of each system. In favourable cases, the masses, sizes, densities, temperatures and luminosities of the two stars can be determined. Many of these stellar properties can be derived only from the study of such systems.

In addition to their research, the astronomers try to give a more direct service to the public. Telephone and mail inquiries are answered and many visitors come to the dome. Lectures are given to schools and other interested groups in the neighbourhood. On Saturday nights in the summer the 72-inch telescope is available for public observation during a two-hour period. Several hundred people take advantage of this opportunity whenever the sky is clear.

The David Dunlap Observatory of the University of Toronto

The David Dunlap Observatory, located at Richmond Hill about ten miles north of Toronto, was built between 1932 and 1935. Its establishment resulted from a fortunate combination of interests centred in the tireless pioneering efforts of Professor C. A. Chant of the Department of Physics and (later) the Department of Astronomy at the University of Toronto in the training of professional astronomers, and in the generous offer of Mrs. Jessie Donalds Dunlap to donate an observatory to the University in memory of her deceased husband who had been interested in the efforts and aspirations of Professor Chant.

The David Dunlap Observatory was designed primarily for astrophysical research. The principal telescope, housed in a 61-foot dome, is a reflector of 74-inch aperture equipped with both Newtonian secondary for direct photography and Cassegrain secondary for use with several accessories for the analysis of starlight. One of these accessories is a prism spectrograph by means of which a star's light may be analysed to calculate its temperature, the content of its atmosphere, its velocity of approach or recession and sometimes its mass and diameter. A new spectrograph under construction in the observatory workshop will use reflection gratings and mirrors and so will extend the stellar spectra into the ultraviolet and will also permit work on fainter stars. Another accessory used at the Cassegrain focus is a photoelectric spectrophotometer which can record the light intensity of a single star in all colours of the spectrum in succession. Separate from the dome for the 74-inch telescope is the Administration Building which contains library, offices, laboratories and workshops. Atop this building there are now two telescopes, a 19-inch reflector which is used for photoelectric photometry of relatively bright stars, and a 6-inch refractor for student use. In the planning stage is a third telescope to be supported on the Administration Building—a reflector of intermediate size to relieve the pressure of student demand upon the other two research telescopes. Measuring instruments of various types for studying astronomical photographs are housed in the Administration Building.

A small separate building serves as the focal point of the Observatory's radio astronomy installation. A variety of antennas and radiometers are used in studying the radio radiation from astronomical objects.

The Observatory's facilities at Richmond Hill are supplemented by laboratories and offices of the Department of Astronomy on the main campus of the University. Here also the astronomy staff and students are able to make considerable use of the up-to-date computing facilities of the University in analysing the data obtained at the Observatory.

Stellar Radial Velocities.—With regard to the real motions of the stars, which reveal the over-all dynamics of the stellar system, classical astronomy had to be content with that part of the motion which is directed across the line of sight and which is manifested by slight changes of position of the stars relative to one another. About eighty years ago it became possible by means of astronomical spectroscopy to measure also the radial or line-of-sight component of stellar motion. These stellar radial velocities, as they became available for statistically large numbers of stars in the early part of this century, revealed much new information concerning the structure of the galaxy. It was this field of radial velocity determination which was chosen for the major effort of the 74-inch telescope during the Observatory's early years. In thirty years about 3,000 stars have been measured for radial velocity out of a total of about 17,000 for which radial velocities are now known.

Stellar Photometry.—Another measurable attribute of stars which has always been of the greatest importance to the study of stars and star systems has been their apparent brightness. In particular this is true for stars of variable brightness. Some classes of these variables hold the clue for the determination of distances in the outer parts of the galaxy, particularly of the globular clusters. A thirty-year program of photographic photometry of faint variable stars in many of the globular clusters has added greatly to the knowledge of these clusters and of the stars which comprise them. A highlight of this program was the recent discovery of a nova or exploding star in one of these clusters. During the past decade photoelectric photometry both with the 74-inch telescope and with the 19-inch telescope has occupied an increasing proportion of the observing time. This kind of photometry is more time-consuming than photographic photometry but it is also more precise. In its simplest form the light of a single star is focused by the telescope onto the photosensitive surface of a photomultiplier tube, and by a suitable amplifying circuit a pen recorder gives a measure of the star's brightness. When various coloured filters are used in succession, the records provide an accurate measure of a star's colour as well as its brightness. In the photoelectric spectrophotometer the colour analysis is carried one step further by recording the brightness of the star at all colours as the star's spectrum is swept over the photosensitive surface. With these photometers many important studies have been made of the brightness and colour of stars and star clusters. Some of these studies have had a direct bearing on theories of the origin and evolution of stars; others have helped to establish the nature of the material in interstellar space and the size and structure of the Milky Way galaxy.

Stellar Luminosities.—Ranking in importance with measurement of apparent brightness of stars is the measurement of the luminosity or intrinsic brightness for, if both can be measured for the same star, then the star's distance may be calculated. Methods are available for gauging stellar luminosities from spectra of the stars and, in recent years, have been adapted to the collection of stellar spectra available at the Observatory from the radial velocity work. About 1,500 stars have now been measured for luminosity and new equipment and new methods are being developed to increase the precision of luminosity determination.

Radio Astronomy.—Astronomical bodies emit radio waves as well as light waves but only recently have radio telescopes been built to study the nature of these radio waves. The result has been a flood of new information about the sun, moon and planets, the interstellar hydrogen gas, and the Milky Way and other galaxies. Through co-operation between the Observatory and the Department of Electrical Engineering, a program of studies in radio astronomy is under way. Antenna and radiometer design, measurement of the radio emission from the sun and the solar corona, studies of ionized interstellar

hydrogen, of supernova remnants, and of the magnetic properties of the earth's surroundings in the Milky Way are some of the topics of this research. The work is carried out at the Algonquin Radio Observatory, Lake Traverse, Ont., as well as at Richmond Hill and on the University of Toronto campus.

Theoretical Studies.—The advent of electronic computation and the rapid development of this powerful scientific tool in the Institute of Computer Studies at the University of Toronto have thrown new emphasis on theoretical approaches to astronomy by the staff and students at the Observatory. These studies range from computations involving the energy generation in the interior of stars to an analysis of the dynamics of the earth's great galaxy. Theoretical studies like these are of the greatest importance at an observatory, sometimes following from observational discoveries and sometimes pointing the way to new observational tests.

The foregoing outline of the work of the Observatory is intended to indicate only the continuing major fields of activity. To this might be added the many particular research problems involving sun, moon, planets, stars, clusters and galaxies which have been undertaken by members of the staff and by graduate students. An effort is always needed to strike a balance between the production of routine astronomical data—which is regarded as a debt to astronomers of the future—and the encouragement of individual enterprise in the attack upon diversified problems of immediate interest—which is regarded in particular as the due of the increasing number of young graduate students who hold the key to the future of Canadian astronomy.

The Observatory is open to the public by appointment on Wednesday afternoons throughout the year and on Saturday evenings except in winter.

Astronomy at the National Research Council

Solar Radio Astronomy.—In 1946 the Radio and Electrical Engineering Division of the National Research Council commenced investigations of the radio emission from the sun at a site near Ottawa. This grew out of the realization that advances in radio technology due to wartime radar work in the Division could be readily used to obtain fundamental information about astronomical objects. A small paraboloidal reflector, four feet in diameter, was used as a radio telescope together with a sensitive radio receiver to measure the radio emission from the solar disc at a frequency of 2,800 megacycles per second (10.7 cm. wave-length). The emission was monitored from sunrise to sunset for several months and when its variations were compared with optical observations at other observatories three components of the radio emission were recognized as follows: (1) an emission from the undisturbed solar atmosphere; (2) an emission varying slowly from day to day which originates from condensations of electrons above sunspots; and (3) sudden enhancements of radio emission associated with solar flares.

Since its inception in 1946 an uninterrupted series of daily observations has been made. This is now recognized as providing a quantitative measure of solar X-ray and ultraviolet emissions which is of great use in ionospheric research, in studies of the solar component of cosmic rays and in studies of the solar influence on the atmospheric drag on satellites. Because of an increase in radio interference near Ottawa, the program was relocated in 1962 at the Algonquin Radio Observatory, Lake Traverse, Ont. A similar patrol undertaken at the Dominion Radio Astrophysical Observatory in co-operation with the Dominion Observatory will provide increased reliability to the combined program and will increase the daily period of observations by three hours, owing to the difference in longitude of the two observatories.

A new type of antenna based upon the principles of interferometry was developed at Ottawa from 1953 to 1958 to obtain a sharp antenna beam in order to study the emission from small regions above sunspots. The antenna is of the linear type, 600 feet in length,

and it has been used to locate the radio-emissive regions in the solar atmosphere. A similar antenna for the Algonquin Radio Observatory will ultimately take the form of a cross or "T" to produce a narrow pencil-shaped beam.

Observations of the sun at longer radio wavelengths (several meters) began in 1948 and have been extended at the new site. These observations are concerned with events in the solar corona at heights up to several solar radii above the optical surface. The events are likely caused by the ejection of particles into the corona from disturbances near sunspots. Information on the magnetic fields in the corona may be derived from these observations. A simple interferometer was used to study the extent of the radio emission during the solar eclipse of July 1963 and to observe the radio emissions from the planet Jupiter.

Galactic and Extra-Galactic Radio Astronomy.—The facilities of the Algonquin Radio Observatory will include three outstanding instruments for general radio astronomy. A precision parabolic radio telescope, 33 feet in diameter, has been in operation since 1963 and can be used at wavelengths as short as 1.5 cm. It is well suited for accurate mapping of selected regions of the sky and has revealed more detail in its first surveys than had been detected in previous studies.

A precisely calibrated horn-reflector antenna is used to provide accurate measures of the amount of radio energy received from the stronger astronomical sources. The measures are of intrinsic value and, in addition, are of importance in that they provide an international standard for the calibration of other, larger radio telescopes.

The major instrument of the Observatory is to be a 150-foot diameter paraboloid with completion scheduled for 1966. The emphasis will be on microwave observations at wavelengths between 3 and 21 cm. The size and precision of this instrument will permit detailed mapping of a large number of interesting regions, including many of the weaker radio sources not observable with a smaller instrument.

Meteor Astronomy.—A program of meteor research is active at the Springhill Meteor Observatory operated by the National Research Council at a location some 25 miles south of Ottawa. Here radar equipment of several types records the flux of meteoric particles into the earth's atmosphere. This program was started shortly after the end of World War II and was put on a continuous recording basis at the beginning of the International Geophysical Year. Some ten million meteors have been recorded on IBM data-processing equipment. In addition, spectrograph records of meteors are correlated with the data from the radar record and with the visual observations carried out simultaneously by a team of eight observers. The aim of this research is to learn more about the physical reactions that take place in the earth's upper atmosphere and to study various properties of the small, solid particles which exist in interplanetary space.

Astronomy at Queen's University

Work in astronomy began in 1861, took a large step forward with the construction of the first Observatory in 1906 and a further step forward in 1955 with the construction of the present Observatory and the establishment of the Radio Astronomy Research Group. The new telescope is a 15-inch reflector equipped with various photographic, photoelectric and spectroscopic devices. It is used mainly as a teaching instrument both for undergraduate students, including a number of school teachers who attend the Queen's Summer School, and for graduate students working on various research projects.

Astronomical research is mainly in the field of radio astronomy where the departments of physics, electrical engineering and mathematics combine their interests. Studies of the ionosphere employing radio astronomy techniques have included a wide variety of observations. The present research is directed mainly toward the design and construction of large-aperture antenna systems suitable for extra-galactic measurements. This work includes both the engineering problems associated with antennas and receivers and the

interpretation of observations in terms of cosmological theory. The principal radio telescope operates at a frequency of 146 megacycles per second; a second instrument is planned which will operate at 73 megacycles per second.

The University of Western Ontario

The Hume Cronyn Memorial Observatory of the University of Western Ontario, London, was established in 1940. The observing equipment includes three moderate-sized telescopes on a single mounting. The major observing program is in stellar photometry using both photoelectric and photographic techniques to study certain types of interesting stars. An electronic computer is used to facilitate the analysis of observational results and to pursue some projects in theoretical astrophysics. Instruction in astronomy is provided at both undergraduate and graduate levels.

Other Astronomical Activities

In addition to the above-described strictly astronomical research, there are certain Canadian research projects in physics under way which have direct applications to astronomy and astrophysics. These include studies in laboratory spectra at the National Research Council and the University of Western Ontario, studies in nuclear physics at the University of Montreal, and certain projects on the upper atmosphere of the earth conducted by the Defence Research Board and the Universities of Saskatchewan and Western Ontario.

In addition to the advanced courses in astronomy offered at certain universities, some astronomical instruction is also available at other institutions. The Royal Astronomical Society of Canada, with centres in 16 Canadian cities, provides a means of communication between professional astronomers and the large number of non-professionals who maintain an active interest in astronomy. The Society publishes a Journal devoted to the dissemination of astronomical knowledge and an annual Handbook which contains the necessary data to facilitate astronomical observing. Small observatories are maintained by some centres of the Society and also by the Regina Astronomical Society. The Queen Elizabeth Planetarium of the City of Edmonton conducts an active program of public education in astronomy and some other Canadian cities have plans for the construction of planetariums. With the increased public awareness of astronomical research resulting from the achievements in space science, further expansion of all aspects of astronomical education may be predicted with confidence.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning ninety-seven years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

While the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western

* Except where otherwise indicated, the information in this Chapter has been brought up to the date of Apr. 30, 1964. Certain changes occurring between that date and the date of going to press will be found in an Appendix to this volume. Also, official appointments made up to the date of going to press will be found in Chapter XXVIII (see Index).

Malak, Ottawa

The National Flag of Canada . . .

flying at Harrington Lake, Gatineau Park. The Proclamation of the new Flag was signed by Her Majesty Queen Elizabeth II at Buckingham Palace on January 28, 1965 in the presence of Prime Minister Lester B. Pearson, to be effective February 15, 1965. At 12 o'clock noon on that day, the Flag was raised for the first time on Parliament Hill in Ottawa, and simultaneously, with fitting ceremony, thousands were raised throughout the land and wherever Canadians were in official service around the world.

Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian

* See *A Consolidation of The British North America Acts 1867 to 1960*, consolidated by Elmer A. Driedger as of Jan. 1, 1964. Queen's Printer, Ottawa. 75 cents (Catalogue No. YX1-164). A further amendment was made in 1964 respecting old age pensions (see p. 66).

environment. For example, the Cabinet system of responsible government (see pp. 61-62) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 80 and p. 93).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. The constitutional background to the problem, the present amending procedures, the attempts since 1935 to devise amending procedures, and the complexities inherent in amendment of a federal constitution are all discussed in a special article published in the 1961 Canada Year Book, pp. 51-57, entitled "Amendment of the Canadian Constitution".* The only barrier to Canada's complete control over the amendment of its own written Constitution (i.e., the British North America Act, 1867, a statute of the British Parliament) has been the inability of the Canadian people and their elected representatives in the federal and provincial fields to draft amendment procedures on which they will be in general agreement.

* Also available in reprint form from the Dominion Bureau of Statistics, Ottawa, 25 cents.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ See pp. 92-93.

⁸ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act of 1867 (Sect. 9) provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of the Queen in relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

The Queen.—The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

"Elizabeth the Second, by the Grace of God, of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith".

1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1960. Acting under the recommendations of his responsible Ministers, in the Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$80,000, respectively. Office expenses and certain other items of expenditure are provided for in the estimates for the Office of the Secretary to the Governor General.

The present Governor General is styled His Excellency General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867
THE BARON LISGAR OF LISGAR AND BAILEBOROUGH.....	Dec. 29, 1868	Feb. 2, 1869

FIELD MARSHAL H. R. H. THE DUKE OF CONNAUGHT.....	Mar. 21, 1911	Oct. 13, 1911
THE DUKE OF DEVONSHIRE.....	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE LORD BYNG OF VIMY.....	Aug. 2, 1921	Aug. 11, 1921
THE VISCOUNT WILLINGDON OF RATON.....	Aug. 5, 1926	Oct. 2, 1926
THE EARL OF BESSBOROUGH.....	Feb. 9, 1931	Apr. 4, 1931
THE BARON TWEEDSMUIR OF ELSFIELD.....	Aug. 10, 1935	Nov. 2, 1935
MAJOR GENERAL THE EARL OF ATHLONE.....	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL THE VISCOUNT ALEXANDER OF TUNIS.....	Mar. 21, 1946	Apr. 12, 1946
THE RIGHT HONOURABLE VINCENT MASSEY.....	Jan. 24, 1952	Feb. 28, 1952
GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer) can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio—usually the Leader of the Government in the Senate—and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

* Senator the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7, 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors, Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Apr. 30, 1964 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at pp. 75-76.

3.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911

Minister of Citizenship and Immigration.....	Hon. RENÉ TREMBLAY.....	Apr. 22, 1963
Minister without Portfolio.....	Hon. JOHN JOSEPH CONNOLLY.....	Feb. 3, 1964
Minister of Forestry.....	Hon. MAURICE SAUVÉ.....	Feb. 3, 1964
Minister without Portfolio.....	Hon. YVON DUPLIS.....	Feb. 3, 1964

¹ Any changes occurring between Apr. 30, 1964 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.—The Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, provides for the appointment of 16 Parliamentary Secretaries from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. The Government thus revived the system of parliamentary assistantships in practice during the World War II and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

At Apr. 30, 1964, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JACK DAVIS.....	} Prime Minister External Affairs Transport Finance Trade and Commerce Northern Affairs and National Resources Secretary of State Labour Public Works Veterans Affairs National Health and Welfare Justice Postmaster General Agriculture Forestry Citizenship and Immigration
GUY ROULEAU.....	
STANLEY HADASZ.....

G. ROY McWILLIAM.....	
CHESLEY W. CARTER.....	
JOHN C. MUNRO.....	
DONALD S. MACDONALD.....	
ALEXIS CARON.....	
BRUCE S. BEER.....	
HUBERT BADANAI.....	

The Privy Council.—The British North America Act of 1867 (Sect. 11) provides for "a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada . . .". At present it consists of about 110 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms "Council" and "Cabinet" are commonly employed as synonyms.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Apr. 30, 1964

President of the Privy Council..... Hon. G. J. McILRAITH
Clerk of the Privy Council and Secretary to the Cabinet..... R. G. ROBERTSON

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council.

¹ The ordinary legal limit of duration for each Parliament is five years.

² Duration of Parliament in

years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50).

³ Date of general election.

⁴ Writs returnable.

⁵ Dissolution of Parliament.

⁶ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957.

⁷ Includes long adjournment from July 13 to Sept. 7, 1961.

⁸ Government defeated in House of Commons on

want of confidence motion.

⁹ Includes long adjournment from Aug. 2 to Sept. 30, 1963.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVIII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 58); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended, at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed for life by the Governor General by instrument under the Great Seal of Canada on the recommendation of the Prime Minister. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was

formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

7.—Representation in the Senate since Confederation, 1867

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

8.—Members of the Senate, by Province, as at Apr. 30, 1964¹

Speaker.....	Hon. MAURICE BOURGET
Leader of the Government.....	Hon. JOHN J. CONNOLLY
Leader of the Opposition.....	Hon. ALFRED J. BROOKS
Clerk of the Senate and Clerk of the Parliaments.....	JOHN FORBES MACNEILL

(Ranked according to seniority, by province. All Senators are entitled to the designation "Honourable".)

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-Sixth Parliament (Apr. 8, 1963), which provided that representation in the House of Commons should be on the following basis:—

"Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members."

Enactment of an Electoral Boundaries Readjustment Act was being debated in the House of Commons throughout the spring of 1964 as required by the British North America Act, 1867 (Sect. 51), following the completion of the 1961 decennial census. The proposed legislation provides for the establishment of an electoral boundary commission for each province to prepare a report for the Representation Commissioner (SC 1963, c. 40) charged with the responsibility of transmitting a certified copy to the Speaker of the House of Commons setting forth the boundary commission's recommendations concerning the division of the province into electoral districts and concerning the description of the boundaries of each such district and the representation and name to be given thereto. The new boundary readjustment Act, if passed before this volume goes to press, will be outlined in the Appendix.

The number of representatives of each province elected at each of the 26 General Elections since Confederation is given in Table 9.

¹ By-elections held between Apr. 30, 1964 and the date of going to press will be carried in an Appendix to this volume.

Indemnities and Allowances.—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate and House of Commons. Senators receive an annual expense allowance of \$3,000 and members of Parliament receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the

sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$2,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, 6 p.c. of his full sessional indemnity toward his retirement allowance, which is based on five twelfths of the total contributions, paid or elected to be paid; to the widow of an ex-member is paid three fifths of the allowance paid or payable to the ex-member at the time of his death. The maximum allowance payable to an ex-member is \$9,000 per annum and the maximum payable to the widow of an ex-member is \$5,400 per annum.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

The latest revision of indemnities and allowances for members of the Senate and of the House of Commons was provided for in an amendment to the Senate and House of Commons Act and the Members of Parliament Retiring Act (SC 1963, c. 14) and became effective Apr. 8, 1963.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with Government establishment of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1958, 1962 and 1963

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; and those for 1949, 1953 and 1957 in the 1962 edition, p. 71.

¹ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1963, 26,472 voters on the list cast 42,703 votes.

² Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1963, 122,846 voters on the list cast 183,402 votes.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River in 1958 and 1962 and Electoral District of Northwest Territories in 1963.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa

and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada, as at Apr. 30, 1964

(In order of seniority)

Name	Date of Appointment
Hon. Chief Justice ROBERT TASCHEREAU.....	Apr. 23, 1963 ¹

Hon. Justice EMMETT M. HALL.....	Nov. 23, 1962
Hon. WISHART FLETT SPENCE.....	May 30, 1963

¹ First appointed a Judge of the Supreme Court, Feb. 9, 1940.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne

judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. In 1960 the two Acts were amended to provide for a Court of Appeal in each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 62 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years who is a Canadian citizen or other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in six of the ten provinces. The exceptions give voting privileges to persons in Quebec and Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

* The information given in Subsections 1 to 7, 9 and 10 of this Section is brought up to Apr. 30, 1964; Subsection 8 is as at June 10, 1964, the date of availability of information following the Saskatchewan General Election of Apr. 22, 1964. Any important changes occurring between those dates and the time of going to press will be found in an Appendix to this volume.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Nov. 19, 1962 is the 33rd in the history of Newfoundland and the 5th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Apr. 30, 1964.

The Premier receives a salary of \$10,000 and the other Cabinet Ministers \$9,000 per annum, plus a sessional indemnity of \$3,333.33 and a travelling and expense allowance of \$2,166.66. Each member of the House of Assembly receives a sessional indemnity of \$3,333.33 plus a travelling and expense allowance of \$1,666.66. An additional allowance of \$3,000 is made to the Leader of the Opposition.

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963.

The General Assembly elected Dec. 10, 1962 is the 50th in the history of Prince Edward Island Legislatures and the 25th since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One half of the members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote). Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is \$8,000 and that of a Cabinet Minister \$5,000. Each member of the Assembly is paid \$2,000 for each session attended by him and an

additional \$1,000 tax free as indemnity for expenses and travelling. The Speaker is paid an additional \$666.60 and a further additional \$333.40 tax free as indemnity for expenses and travelling. The Leader of the Opposition is paid an additional \$1,000 and a further additional \$500 tax free for expenses and travelling.

15.—Legislatures of Prince Edward Island, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1938 edition, p. 110; and for 1936-43 in the 1963-64 edition, p. 82.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected Oct. 8, 1963 is the 48th in Nova Scotia's history and the 25th since Confederation. Premiers since Confederation are listed in the 1960 Year Book, p. 107.

The Premier of the province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum. Each member of the House of Assembly receives a sessional indemnity of \$3,200 and an allowance of \$1,600 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$7,200 in addition to his sessional indemnity.

17.—Legislatures of Nova Scotia, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76; for 1924-33 in the 1938 edition, p. 111; and for 1939-44 in the 1963-64 edition, p. 83.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Hon. J. Leonard O'Brien, Lieutenant-Governor at Apr. 30, 1964, was commissioned to office June 6, 1958. Lieutenant-Governors since Confederation (1867) are cited in the 1960 Year Book, p. 108.

The Legislature elected Apr. 22, 1963 is the 45th in New Brunswick's history and the 18th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108.

The Premier receives \$7,500 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$10,000 and the amount paid as indemnity to each member of the House of Assembly is \$3,400 plus an additional \$1,700 allowance for expenses. The Leader of the Opposition receives an additional \$6,000 and the Speaker receives an allowance of \$4,000 in addition to the regular indemnity.

19.—Legislatures of New Brunswick, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77; for 1924-35 in the 1938 edition, p. 112; and for 1936-44 in the 1963-64 edition, p. 84.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature—the Legislative Council and the Legislative Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958 followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961.

The Legislative Council has 21 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 95 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The

maximum life of a legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110.

Each member of the Legislative Council and the Legislative Assembly receives a sessional indemnity of \$10,000, plus an expense allowance of \$2,000 to each Legislative Councillor and \$5,000 to each member of the Legislative Assembly. In addition to this sessional indemnity and allowance, the Premier receives an annual indemnity of \$12,000, an expense allowance of \$4,000 and a lodging allowance of \$2,000; Ministers with Portfolio each receive an annual indemnity of \$10,000 plus a \$5,000 expense allowance; Ministers without Portfolio each receive an indemnity of \$5,000 plus a \$2,000 expense allowance; the Speaker of the Legislative Assembly receives an indemnity of \$8,000, an expense allowance of \$1,000 and a lodging allowance of \$1,000 and the Deputy Speaker receives an indemnity of \$5,000 and an expense allowance of \$1,000; the Leader of the Opposition in the Assembly receives an indemnity of \$8,000, an expense allowance of \$2,000 and a lodging allowance of \$2,000; the Leader of the Government and the Leader of the Opposition in the Legislative Council each receive an additional sessional indemnity of \$2,000 plus a \$3,000 expense allowance.

21.—Legislatures of Quebec, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-44 in the 1963-64 edition, p. 85.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date, the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective Mar. 1, 1963.

The House of Assembly, the single-chamber Legislature of the province, is composed of 108 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Robarts became Premier on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Premier from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208) each member of the Assembly is paid an annual indemnity of \$5,000 and an allowance of \$2,000 for expenses. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$2,000; and the Leader of the Opposition a salary of \$12,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$16,000 and for a Cabinet Minister having charge of a department \$12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$2,500 salary and \$1,000 representation allowance per annum, by the Executive Council Act and the Legislative Assembly Act, respectively (RSO 1960).

24.—Legislatures of Ontario, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-45 in the 1963-64 edition, p. 87.

Minister of Economics and Development...	HON. STANLEY JOHN RANDALL...	Nov. 8, 1963	Nov. 8, 1963
Attorney General.....	HON. ARTHUR ALLISON WISHART..	Mar. 26, 1964	Mar. 26, 1964

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 13 members and a Legislative Assembly of 57 members elected for a statutory term of five years. The Hon. Errick F. Willis, Lieutenant-Governor at Apr. 30, 1964, was sworn in on Jan. 15, 1960. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113. Premiers since Confederation are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of \$14,500 per annum and each of the other members of the Cabinet \$12,500. Members of the Legislature are each paid a sessional indemnity of \$3,200 and an expense allowance of \$1,600 plus an allowance of \$10 a day for a period of 60 days continuous sitting including Saturdays and Sundays. The Leader of the Opposition is paid an additional amount of \$6,000 and the Speaker of the Legislature receives \$9,600 which is an amount equal to double the indemnity and expense allowance of an individual member.

26.—Legislatures of Manitoba, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-45 in the 1963-64 edition, p. 88.

Subsection 8.—Saskatchewan*

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, followed by the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115.

The Premier receives \$13,000 and each Cabinet Minister \$10,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$10,000 plus an office allowance of \$12,000 per annum, the Speaker \$3,000 and the Deputy Speaker \$2,000. The sessional indemnity of a member of the Legislature is \$4,000 together with an expense allowance of \$2,000. Each of the members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake receives a \$4,335 sessional indemnity and a \$2,165 expense allowance.

* As at June 10, 1964, the date of availability of information following the General Election of Apr. 22, 1964.

28.—Legislatures of Saskatchewan, 1945-64, as at June 10, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-44 in the 1963-64 edition, p. 89.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. There are 63 members in the Legislative Assembly, elected for a maximum period of five years. The Hon. J. Percy Page, Lieutenant-Governor at Apr. 30, 1964, was commissioned to office Dec. 19, 1959. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116. Premiers since Confederation are listed in the same edition, p. 117.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$3,600 plus \$1,800 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is \$6,000 plus \$3,000 expense allowance, the Deputy Speaker's sessional indemnity is \$4,800 plus \$2,400 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,600 plus \$3,800 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$16,000 and each of the other Ministers receives \$12,500.

30.—Legislatures of Alberta, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-44 in the 1963-64 edition, p. 90.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at Apr. 30, 1964, was commissioned to office Oct. 13, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 52 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$4,000 and \$1,000 for expenses. There is also paid to each member a living allowance of \$25 for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of \$25

in any session is not paid in respect of more than 40 days. Each member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$400 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$17,500 and each member of the Executive Council \$15,000. The Leader of the Opposition has a special allowance of \$5,000 for expenses, the Speaker receives a special allowance of \$5,000 and the Deputy Speaker an allowance of \$1,500.

32.—Legislatures of British Columbia, 1945-64, as at Apr. 30, 1964

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 193 edition, p. 118; and for 1938-45 in the 1963-64 edition, p. 91.

Subsection 11.—Yukon Territory and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898 (see p. 59). Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council of seven members (1961) which usually meets twice each year in Whitehorse, the seat of local government; the Council elects its own speaker. The Commissioner administers the government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The Commissioner and Council in office on Apr. 30, 1964 were elected in 1961 for a three-year term.

Territorial Treasurer.....	K. MCKENZIE
Legal Adviser.....	C. P. HUGHES

The Northern Administration Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains lands and mining offices at four points in the Territory. Other departments and agencies of the Federal Government, including the Department of Justice, the Royal Canadian Mounted Police, the Departments of National Defence, Citizenship and Immigration, Mines and Technical Surveys, National Revenue, Transport, Post Office, Agriculture, Fisheries, and Public Works and the Unemployment Insurance Commission also maintain offices in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905, the Northwest Territories comprise: (1) all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland; and (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. The Northwest Territories Act, as amended, also provides for a

* Further information on officials of various Federal Government departments serving the Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of Territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa, which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are conducted by the Northern Administration Branch of the Department of Northern Affairs and National Resources. Administrative offices are located at a number of centres in the Territories including Fort Smith, Yellowknife, Hay River, Inuvik and Frobisher Bay.

Legal Adviser.....	DR. HUGO FISCHER

Section 3.—Municipal Government*

The British North America Act of 1867 placed municipal government in Canada under the control of the provincial legislatures. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group and many to one municipality only. The types of municipal organization in existence and the nature of the municipal services provided vary greatly from region to region and are adjusted from time to time to meet changing needs and conditions.

In addition to the well-known types of organized municipalities—cities, towns, villages, counties, etc.—there are various other forms of local government organization. Certain municipal government bodies encompass a number of municipalities or parts of municipalities. For example, special district authorities (greater water and sewerage districts, drainage and irrigation districts and health units) may provide services to a number of municipalities. Similarly, metropolitan government authorities provide certain services to a number of area municipalities. In some provinces, the more sparsely settled areas do not have organized municipalities. Instead, they are divided into local improvement districts, local government districts or special areas in which the local government services are administered by officials appointed by the provincial Departments of Municipal Affairs.

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The major local revenue source available to municipalities is the taxation of real property. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes) and tenants. In two provinces municipalities may levy an amusement tax, in three they may impose sales taxes on specific commodities. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. A great many municipalities operate utilities for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their utilities and enterprises.

In differing degrees and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. In most provinces, municipalities are responsible for levying and collecting local education taxes on property on behalf of the local schools, and often for borrowing capital funds for school construction. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except Alberta; see p. 96).

All provinces give some form of financial assistance to their municipalities. This may be in the form of monetary grants, such as unconditional subsidies which may be spent as the municipalities see fit, or grants in aid of specific services that are the municipal responsibility. The provinces may also make loans to municipalities for capital purposes or guarantee the bonds issued by the municipalities. Other forms of indirect assistance are the resumption by the provincial governments of responsibilities formerly delegated to the municipalities and the extension of municipal taxing privileges into what were formerly considered to be provincial revenue fields. The provinces also provide various technical and consultative services to their municipalities.

The following paragraphs describe municipal organization in each province and in the Territories as at Jan. 1, 1964. In Table 34 (which gives the number of each type of municipality in each province) all fully incorporated cities, towns and villages are regarded as 'urban' municipalities.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 45 towns, four rural districts, two local improvement districts and 47 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.—In this province, one city and seven towns have been incorporated under special Acts and 17 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirty-nine towns operate under the Town Incorporation Act but there are no municipalities

incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, although certain of their powers often apply in both rural and urban municipalities. The seven cities have special charters and the 20 towns operate under the Towns Incorporation Act. There is also one village. There are 57 local improvement districts and 10 commissions within the counties but outside the cities, towns and village; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 328 villages and 1,108 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 63 cities and 178 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The active functions of the Montreal Metropolitan Corporation are limited because of the ability of the area municipalities to fulfil their own obligations. The Corporation services borrowings contracted before Apr. 1, 1961, when the Montreal Metropolitan Boulevard became a provincial responsibility, and apportions costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

Ontario.—Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders and these provide its revenue. There are 32 cities, 158 towns, 157 villages, 573 townships and 18 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city, four towns, three villages and five townships. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto, and the head of the council of each of the 12 suburban municipalities. The chairman is elected by the councillors and need not be a councillor of an area municipality. The Council has jurisdiction over assessments, water supply,

sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services and the correlation of educational facilities in the metropolitan area. It also controls a unified metropolitan police force and a metropolitan licensing commission. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.—Manitoba has nine cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 36 towns, 41 villages and 110 rural municipalities under the Municipal Act. There are local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten new districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 120 towns, 363 villages and 296 rural municipalities. The area so organized consists of most of the southern two fifths of the province; the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, although some municipal services are provided by the province through operation of the Northern Administrative Area. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.—The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the nine cities, 90 towns, 162 villages, 22 municipal districts and 26 counties. The latter administer schools as well as municipal services. Municipal government for the 51 improvement districts and three special areas is provided by the Department of Municipal Affairs.

British Columbia.—Less than one half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, four towns, 62 villages and 30 districts; the latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver which are largely urban in character. It should be emphasized, however, that the application of the name 'city' is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 1,000 and perhaps one half or more would not normally be incorporated as cities in another province. Municipalities are supervised by the Department of Municipal Affairs.

In addition to the above types of municipalities, there are unincorporated improvement districts that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc. These districts are under the supervision of the Department of Lands, Forests, and Water Resources.

Yukon and Northwest Territories.—There are two cities, Whitehorse and Dawson, and one unincorporated town, Mayo, in the Yukon Territory and two municipal districts, Yellowknife and Hay River, in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 34.

34.—Official Designation and Statistical Classification of Municipalities, by Province, as at Jan. 1, 1964

¹ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 9).

² Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation.

³ Includes the 57 local improvement districts; excludes commissions.

⁴ The Montreal Metropolitan Corporation.

⁵ The Municipality of Metropolitan Toronto.

⁶ The Metropolitan Corporation of Greater Winnipeg.

⁷ Designated by the province as towns (45), rural districts (4) and local improvement districts (2); all operate under the same Act.

⁸ Classified by the province as community councils.

⁹ Rural municipalities are designated by different names in the different provinces.

¹⁰ Includes the 18 improvement districts.

¹¹ Includes the 3 units of self-government known as suburban municipalities; excludes the unincorporated local government districts.

¹² Excludes the 12 unincorporated local improvement districts.

¹³ Includes the 26 county municipalities; excludes the 51 unincorporated improvement districts and the 3 special areas.

¹⁴ Excludes the 276 unincorporated improvement districts and the 2 local districts.

¹⁵ Includes the Inter-Urban Corporation of Ile Jésus (formerly Laval County).

¹⁶ Includes municipalities shown wholly or partly in metropolitan areas by the 1961 Census, with subsequent revisions to take care of annexations, etc.

¹⁷ Included in "Urban" are the Montreal Metropolitan Corporation, the Municipality of Metropolitan Toronto and the Metropolitan Corporation of Greater Winnipeg.

¹⁸ Classified by the province as suburban or semi-urban.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions Established.—Royal Commissions established from May 1, 1963 to Apr. 30, 1964 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commission established between Apr. 30, 1964 and the date of going to press will be found in the Register of Official Appointments, Chapter XXVIII, Part IV.

<i>Nature of Commission</i>	<i>Chief Commissioner</i>	<i>Date Established</i>
To inquire into and report upon the existing state of bilingualism and biculturalism in Canada, etc.	ANDRÉ LAURENDEAU } DAVIDSON DUNTON }	July 19, 1963
To inquire into and report upon certain problems relating to the Prairie Farm Assistance Administration.	His Hon. Judge HAROLD W. POPE.	Dec. 21, 1963

Reports of Federal Royal Commissions.—Reports of Federal Royal Commissions issued during the period May 1, 1963 to Apr. 30, 1964 were as follows.

Royal Commission on Government Organization, established Sept. 16, 1960: Organization of the Government of Canada. Ottawa, 1963. Pp. 23-97. 50 cents. (Cat. No. Z1-1960/4-524).

Vol. 5, Organization of the Government of Canada: Summary of proposals for reorganization (abridged edition). Ottawa, June 1963. 100 p. \$1. (Cat. No. Z1-1960/4-5.1).

Royal Commission on Bilingualism and Biculturalism, established July 19, 1963: Preliminary hearing. Ottawa, Nov. 1963. 548 p. Bilingual. \$54.80. (Cat. No. Z1-1963/1).

Royal Commission on Banking and Finance, established Oct. 18, 1961. Ottawa, 1964. 587 p. \$10. (Cat. No. Z1-1961/2).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the period May 1, 1963 to Apr. 30, 1964.

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
NOVA SCOTIA		
To inquire into cost of borrowing money.....	A. R. MOREIRA.....	May 29, 1963
To inquire into safe transportation of school children	C. R. RAND.....	Aug. 22, 1963
To inquire into prices paid for pulpwood.....	R. J. MACSWEEN.....	Apr. 16, 1964
NEW BRUNSWICK		
*To inquire into present and future supply of, demand for and revenue structure of primary forest products.	LOUIS R. SCHEULT.....	Apr. 10, 1963
QUEBEC		
*To inquire into chiropractic in the Province of Quebec.	His Hon. Judge GÉRARD LACROIX.	Feb. 21, 1963
*To inquire into the provincial, municipal and school taxation system.	MARCEL BÉLANGER.....	Mar. 12, 1963
*To inquire into the Catholic School Board of the City of Jacques Cartier, the Catholic School Board of Verdun and the school trustees of the municipality of Alma.	RAYMOND MORCEL.....	Mar. 19, 1963
*To inquire into the book trade in Quebec.....	MAURICE BOUCHARD.....	Apr. 3, 1963

* Appointed prior to May 1, 1963, but omitted from the list published in the 1963-64 Year Book.

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
QUEBEC—concluded		
To inquire into the municipal administrative system of the City of Quebec.	His Hon. Judge CHARLES-A. SYLVESTRE.	May 17, 1963
To inquire into the real estate transactions of the Protestant School Board of Greater Montreal.	His Hon. Judge ARTHUR I. SMITH.	Nov. 13, 1963
To inquire into the Coffin affair.....	His Hon. Judge ROGER BROSSARD.	Jan. 8, 1964
To inquire into the Municipal Court of the City of Quebec.	His Hon. Judge CHARLES-A. SYLVESTRE.	Jan. 29, 1964

ONTARIO

To inquire into and report upon the structure and the operation of the Municipality of Metropolitan Toronto and the School Board, to examine whether the purposes and objectives of the establishment of the Corporation and the School Board have been met and to determine whether the objectives of establishing the Municipality of Metropolitan Toronto could be achieved under a new or revised system of local government and whether the boundaries of the metropolitan area should be extended.	H. CARL GOLDENBERG.....	June 20, 1963
To inquire into and report upon the contents of Bill 163, an Act respecting medical services insurance and how its principles may be best implemented.	Dr. J. GERALD HAGEY.....	Aug. 22, 1963
To inquire into and report upon the applying of compulsory arbitration in the settlement of disputes between Labour and Management over the negotiation and settlement of terms of collective agreements affecting hospitals and their employees and, in particular, to the settlement of a dispute concerning the Trenton Memorial Hospital and its employees.	His Hon. Judge COLIN E. BENNETT	Oct. 31, 1963

MANITOBA

*To inquire into the organization and finance of local governments in the Province of Manitoba and their relations with the provincial government.	Hon. ROLAND MICHENER.....	Feb. 13, 1963
--	---------------------------	---------------

SASKATCHEWAN

To consult and co-operate with the federal Royal Commission on Taxation, to consider and report upon the systems of taxation which comprise the total tax structure in effect in the Province of Saskatchewan and to make recommendations for changes and improvements in the existing tax structure and in tax administration.	Dr. T. H. McLEOD.....	June 4, 1963
---	-----------------------	--------------

BRITISH COLUMBIA

To inquire into the fairness of the price structure of gasoline at the refinery, wholesale, and retail levels in the province.	His Hon. Judge CHARLES WILLIAM MORROW.	Oct. 21, 1963
To inquire into and study the Workmen's Compensation Act and its administration.	Hon. CHARLES WILLIAM TYSOE†...	Jan. 23, 1964

* Appointed prior to May 1, 1963, but omitted from the list published in the 1963-64 Year Book.

† Appointed to replace the Hon. Chief Justice Alexander Campbell DesBrissay, who died on Nov. 30, 1963, before completing the inquiry to which he was appointed. See 1963-64 Year Book, p. 99.

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Financial Administration*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

Estimates and Appropriations.—In the latter part of the calendar year, at the request of the Minister of Finance, each of the several departments prepares its estimates for the following fiscal year and submits them by a specified date to the Treasury Board. This Board is a Committee of the Queen's Privy Council for Canada and consists of the Minister of Finance as chairman and five other Ministers named by the Governor in Council, with such additional members of the Privy Council as the Governor in Council may nominate to serve as alternates. A senior officer of the Department of Finance acts as secretary to the Board and the necessary staff is provided by that Department. Under the Financial Administration Act, the Board has a statutory duty to advise the Governor in Council on matters relating to finance, estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service.

On receipt, departmental estimates are assembled by officers of the Treasury Board, comparisons are made with the expenditures of previous years and digests of supporting data and other pertinent information are prepared. The Board reviews each departmental submission in the light of probable revenues and of governmental policy generally, usually consulting the appropriate Minister and departmental officials. Expenditure proposals may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, these estimates, known as the Main Estimates, are submitted to the Cabinet and later to the Governor General for approval and are then laid before the House of Commons.

On motion of the Minister of Finance, the estimates are referred for consideration to the Committee of Supply, which is a committee of the whole House. However, the estimates of certain departments may first go to select committees of the House; these, after being reported upon to the House, are referred back to the Committee of Supply. The consideration of the estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, the estimates are referred to the Committee of Ways and Means, also a committee of the whole House, which is asked to consider a resolution for the introduction of a Bill to appropriate money to meet the requirements as approved in the Committee of Supply. When such resolution is passed, an appropriation Bill is introduced which, when

* Prepared under the direction of H. R. Balls, Comptroller of the Treasury, Department of Finance, Ottawa.

approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until supply, voted by Parliament to the Crown, is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one twelfth or one sixth of the total of each item in the estimates, equivalent to one or two months' supply, respectively. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, supplementary estimates are usually introduced after some months of the fiscal year have elapsed, and just prior to the end of the fiscal year further supplementary estimates are laid before the House. These supplementary estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision is also made for the expenditure of public money in emergencies where no specific parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the Minister of Finance that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant is published in the *Canada Gazette* within thirty days of issue. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust and insurance, pension and guaranty accounts which the Government holds or administers, including the old age security fund which is operated as a separate entity. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for supplementary and further supplementary estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments

which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into Committee of Ways and Means, the debate on which usually lasts for several weeks. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.—The administrative procedures whereby revenues are collected and expenditures are made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The principal agencies exercising control over expenditures are the Treasury Board (previously described) and the Comptroller of the Treasury, who has the status of a deputy head but is an officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the consideration of the estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Comptroller of the Treasury. If the charge is a lawful one against the appropriation and does not exceed the amount of the appropriation or reduce it below the amount necessary to meet other commitments, and does not contravene any applicable legislative or executive requirements, the Comptroller will make the payment. However, if he declines to make a payment, disallows an item in an account or refuses to

give a certificate, the Minister concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the beginning of each fiscal year each department submits to the Treasury Board, through the Comptroller, a division or allotment of each item included in its estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, the Comptroller records and controls commitments due to come in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. The Government, through the Treasury Board and the Comptroller, also maintains careful control over commitments made under contract that will fall due in succeeding years, since it must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts incurred prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Comptroller by cheque drawn on the account of the Receiver General or by such other instrument as the Treasury Board may direct. In practice, the paid Comptroller's cheques are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Branch of the Comptroller's Office, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.—Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are not recorded on the statement of assets and liabilities.

Annually, on or before Dec. 31 or, if Parliament is not then in session, within fifteen days after the commencement of the ensuing session, the *Public Accounts* is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year, statements of the revenues and expenditures for the year and of the assets and direct and contingent liabilities as at the end of the year, together with such other accounts and information as are necessary to show the financial

transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

The Auditor General.—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

Section 2.—Departments, Boards, Commissions, etc.*

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

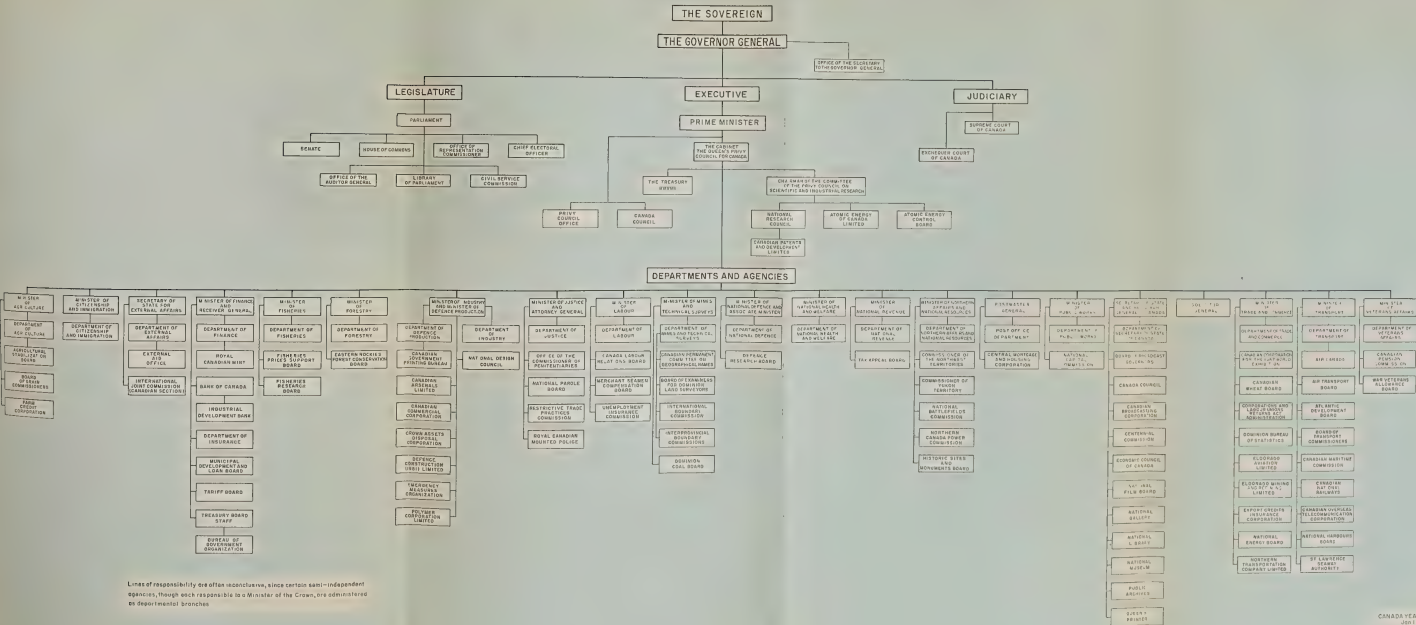

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; reclamation and development is carried out by the Prairie Farm Rehabilitation Administration; and security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act and the Agricultural Stabilization Act. The Farm Credit Corporation and the Board of Grain Commissioners report to Parliament through the Minister of Agriculture.

Air Transport Board.—The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and for advising the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

* As at Apr. 30, 1964; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume.

THE GOVERNMENT OF CANADA

Auditor General's Office.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.—This Board, established under the provisions of the Broadcasting Act which was assented to on Sept. 6, 1958, is given authority to regulate radio and television broadcasting in Canada. The Board has authority to regulate the establishment and operation of both public and private broadcasting stations and networks of stations. Applications for licences to establish new broadcasting stations, for changes in the facilities of existing stations or for changes in the ownership or in the share structure of licensees are referred to the Board by the Minister of Transport for a recommendation before being dealt with. The Board has three full-time and twelve part-time members and reports to Parliament through the Secretary of State.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

Board of Transport Commissioners.—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

Bureau of Government Organization.—The Bureau was established by Order in Council dated Feb. 12, 1963, as a branch of the Privy Council Office (and designated as a "Department" for the purposes of the Civil Service Act and the Financial Administration Act), to facilitate the implementation of the recommendations of the Royal Commission on Government Organization. The responsible Minister is the Minister of Finance.

Canadian Government Printing Bureau.—The printing functions formerly provided by the Department of Public Printing and Stationery were transferred by Order in Council (PC 1963—1254) dated Aug. 21, 1963, to the Department of Defence Production. The latter Department, on Apr. 1, 1964, authorized the organization of the Canadian Government Printing Bureau as a distinct function under that Department, to be separated from the former Publications Branch and the Purchasing Stationery and Stores Branch of the Department of Public Printing and Stationery.

The Canadian Government Printing Bureau, under the direction of a General Manager, provides a variety of printing services, such as House of Commons Debates, Votes and Proceedings, Orders of the Day and other parliamentary papers for both Houses of Parliament, and other printing requirements of government departments and agencies. The main plant is located in Hull, Que.; smaller field units are located in the Ottawa area and in other major centres to provide government departments with quick service for their duplicating requirements.

Canadian Government Specifications Board.—This is an interdepartmental body composed of the Deputy Heads of 24 Federal Government departments and agencies. The Board operates under the auspices of the National Research Council through the medium of committees in which government and industry co-operate on a voluntary basis. The Board prepares specifications in commodity fields and for materials, processes and equipment required by government agencies, and arranges for necessary testing and research. An Index of Specifications is available on request to the CGSB Secretary, National Research Council, Ottawa.

Canadian Pension Commission.—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service related to the World War II effort. It also adjudicates on claims for pension under various other measures, including the Flying Accidents Compensation Order and the RCMP Continuation Act; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants.

It consists of eight to twelve Commissioners and up to five *ad hoc* Commissioners appointed by the Governor in Council. Its chairman has the rank and powers of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (RSC 1952, c. 67) and came into existence on Jan. 18, 1950 under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters at Ottawa, termed the "inside service". The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside service and temporary appointments. It also gave the Commission other responsibilities in the field of personnel administration including responsibility for promotion, for classification of positions and for recommending rates of pay.

The Civil Service Act of 1961, which came into force on Apr. 1, 1962, has three main features. First, it preserves the independence of the Civil Service Commission and carries forward and strengthens all the fundamental principles of the merit system. Secondly, it clarifies the role of the Civil Service Commission in those other areas of personnel administration with which it is concerned but which do not bear directly upon the merit system. Thirdly, it confers on staff associations the right to be consulted on matters that have to do with remuneration and conditions of employment.

The Civil Service Commission is responsible only to Parliament and not to the executive government and reports to Parliament through the Secretary of State. It consists of three members, one of whom is chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and has the rank and standing of a Deputy Minister. The Commission has a staff of more than 700 persons located in its headquarters at Ottawa and in its field offices at St. John's, Nfld., Halifax, N.S., Moncton and Saint John, N.B., Quebec and Montreal, Que., Toronto and London, Ont., Winnipeg, Man., Regina and Saskatoon, Sask., Edmonton and Calgary, Alta., and Vancouver and Victoria, B.C.

Department of Defence Production.—This Department was established on Apr. 1, 1951 under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended). Under this Act the Minister of Defence Production (in practice the Minister of Industry) is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1935, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries, particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. Under the provisions of the Department of Industry Act the Minister of Industry now exercises all the duties, powers, etc., of the Minister of Defence Production.

The main operating units of the Department correspond to the ten line branches of the Department of Industry—Aircraft, Chemicals, Clothing and Textiles, Electrical and Electronics, Food Products, Machinery, Materials, Mechanical Transport, Shipbuilding and Wood Products. Major

offices for foreign procurement are located at London, England, and Washington, U.S.A. The Regional Purchasing Branch has 14 district purchasing offices located throughout Canada for local or urgent procurement. In addition, the Department contains the International Programs Branch, the Canadian Government Printing Bureau, Procurement Purchasing and Stores Branch and the following staff and support branches which service both the Departments of Defence Production and Industry—Comptroller's, Financial Adviser's, General Services, Legal, Management Control, Management Services, and Personnel. The Emergency Supply Planning Branch is responsible for planning the arrangements necessary to permit a War Supplies Agency to be brought into immediate existence in the event of a nuclear war.

As a result of a Cabinet decision on Sept. 4, 1963, the Department has been designated as the central purchasing agency for all civil departments and agencies, other than the commercially oriented Crown corporations. Branches that have been formed to carry out these new responsibilities are—Cataloguing, Quality Assurance, Specifications and Standards, Traffic Management, and Warehousing and Distribution.

Crown corporations and agencies reporting to Parliament through the Minister of Industry in his capacity as Minister of the Department of Defence Production are the Canadian Government Printing Bureau, Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, Emergency Measures Organization and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who reports to Parliament through the Minister of Trade and Commerce.

Emergency Measures Organization.—This organization was established in June 1957 for the purpose of co-ordinating civil emergency planning at the federal level. On Sept. 1, 1959, the Federal Government, in revising the assignments in the field of civil emergency planning, gave the Departments of National Defence, National Health and Welfare, and Justice, responsibility for certain specific civil defence functions, and the Emergency Measures Organization responsibility for overall co-ordination of all aspects of civil emergency planning, assistance to provincial governments and municipalities, and general liaison with other countries. On July 1, 1963, the Organization was given the further responsibility of directing and administering the Civil Defence College at Arnprior, Ont., a responsibility previously discharged by the Department of National Health and Welfare. The organization reports to Parliament through the Minister of Industry.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 77 diplomatic, consular and other missions maintained abroad by the Department. In 39 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 25 units, comprising 24 divisions and one section. The divisions may be grouped into three categories—area, functional and administrative. There are six area divisions—African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; thirteen functional divisions—Communications, Consular, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Passport, Press and Liaison, Protocol and United Nations; and five administrative divisions—Administrative Services, Finance, Personnel, Registry, and Supplies and Properties. The one section is the Inspection Service.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for

the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized in five principal divisions: Financial Affairs, Economic Affairs, Taxation, Federal-Provincial-Municipal Relations, and Treasury Board. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department. The Tariff Board, the Municipal Development and Loan Board, the Bank of Canada and the Bureau of Government Organization report to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

Fisheries Research Board.—The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are university scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board operates four biological stations and an Arctic Unit across Canada, and three technological stations with two technological application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Forestry.—Established in October 1960, the Department of Forestry conducts comprehensive programs of research relating to forest management, silviculture and protection against fire, insects and diseases, and relating to the utilization of forest products. It also carries out economic studies relating to forest resources and the forest industries. Through a developing information program it seeks to promote greater public understanding of the proper management, protection and use of the forest resources. Financial assistance is offered to the provinces under agreements authorized by the Governor in Council in order to expedite progress in specific forestry programs. It carries out forest surveys and provides technical advice and assistance to other agencies of the Federal Government which are responsible for the administration of forest lands. The Department co-operates with international organizations concerned with forestry and in which Canada maintains membership, and the Minister of Forestry reports to Parliament for the Eastern Rockies Forest Conservation Board.

Department of Industry.—In 1963 legislation was introduced into Parliament to establish the Department of Industry. On July 22, 1963, Royal Assent was given to the Department of Industry Act and, with the proclamation on July 25, 1963, the new Department came into existence. Under the Act, the duties, powers and functions of the Minister of Industry are "to include all matters relating to manufacturing industries in Canada over which the Parliament of Canada has jurisdiction, not by law assigned to any other branch or agency of the Government of Canada". The Department is responsible for promoting the establishment, growth, efficiency and improvement of manufacturing industries in Canada through the development and implementation of programs to assist manufacturers to adjust to changing market conditions, to help them develop new lines of production and enter new markets, and to promote greater industrial research and development as well as good design within Canadian industry.

The Area Development Agency—part of the Department of Industry—is responsible for undertaking research and investigations on an area or regional basis and preparing programs of development for designated areas of high unemployment and slow economic growth in co-operation with the provinces. The Agency administers the various Federal Government incentive measures intended to foster the economic growth of designated areas.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted

a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who has the status of a Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and civil service insurance.

Under the relevant provincial statutes the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada) is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal of Canada, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administering federal statutes dealing with legal matters and providing administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada, and administers the provisions of Canadian anti-combine legislation.

The Commissioner of the Royal Canadian Mounted Police operates under the direction of the Minister of Justice who also reports to Parliament for the National Parole Board and the Restrictive Trade Practices Commission.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; technical and vocational training assistance; vocational rehabilitation of disabled persons; annual vacations with pay. It promotes joint consultation in industry through labour-management committees; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The National Technical and Vocational Training Advisory Council and the National Advisory Council on Rehabilitation of Disabled Persons act in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission reports to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

Library of Parliament.—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (SC 1949, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues official sailing directions and Canadian sea and air navigation charts. To this has been added recently the study of coastal waters and of the country's continental shelf as well as of the deep ocean for defence and resource assessment purposes. The Department is divided into six branches: the Surveys and Mapping Branch, the Marine Sciences Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

The Department administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: the Canadian Permanent Committee on Geographical Names; the Board of Examiners for Dominion Land Surveyors; the International Boundary Commission; and the Interprovincial Boundary Commissions. The Minister of Mines and Technical Surveys reports to Parliament for the Dominion Coal Board.

Department of National Defence.*—The Department of National Defence was established on Jan. 1, 1923 by the Department of National Defence Act, 1922, and was an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board. The Department and the Canadian Forces (the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force) now operate under the National Defence Act, 1950 (RSC 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime Forces the appointment of Ministers of National Defence for Naval Services and Air Services ceased, and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional Ministers. Under the National Defence Act, the Canadian Forces are being administered solely by the Minister of National Defence and the Associate Minister of National Defence.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, now functions under the National Defence Act. The Chairman of the Board has a status equivalent to that of a Chief of Staff of one of the Canadian Forces.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Trade and Commerce.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

* Changes pending at Apr. 30, 1964 will appear in the Appendix, if made effective before this volume goes to press.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Administration, Health and Welfare—and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 4, p. 125, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, mental health, dental health, nursing, medical rehabilitation, nutrition and hospital design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of civil servants and other government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians. It co-ordinates and assists international welfare activities in which Canada is engaged and administers a system of grants to the provinces for professional welfare training, welfare research and general welfare services.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1963 consisted of about 250,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and three members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Minister of Justice.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax and estate taxes for Canada and all provinces, except Quebec, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to the Administration Branch, which includes common service functions, the Department is divided into three branches: the National Parks Branch, which administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch, which is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interest in certain joint federal-provincial construction projects; and the Northern Administration Branch, which is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories and for Eskimo affairs, as well as for certain other lands and mineral rights vested in the Crown in the right of Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Northern Canada Power Commission and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Committees on Northern Development and Water Use Policy, act in an advisory capacity to the Minister in their respective fields. The Deputy Minister is Chairman of the Northern Canada Power Commission.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business. The Central Mortgage and Housing Corporation reports to Parliament through the Postmaster General.

Privy Council Office.—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and First Secretary to the Cabinet. Since 1946, the Privy Council Office has been further re-organized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Privy Council Section concerned with the examination of submissions to the Governor in Council, preparation of draft orders and regulations, circulation and filing of approved orders, administration of oaths of office and secrecy, and the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette*; the Cabinet Section dealing with secretarial work for the Cabinet and for Cabinet committees and interdepartmental committees, such as the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions, liaison with departments and agencies of government, and the preparation of material for the Prime Minister; and the Office of the Prime Minister organized as a Secretariat with officers responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. The Archives operates a large Records Centre which provides accommodation for departmental records that are seldom used and also serves as a sorting centre, preserving papers of long-term interest from obsolete files and marking useless material for destruction. The Government's Central Microfilm Unit is housed in the Records Centre.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum and study centre.

Department of Public Works.—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department maintains district offices at key points across the country. The Branches and Divisions of the Department are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, Purchasing and Stores, Administrative Services, Economic Studies, Financial Services, Fire Prevention, Information Services, Legal Services and Personnel.

The Minister of Public Works is also responsible to Parliament for the National Capital Commission.

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. The Force is controlled and administered by the Minister of Justice.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General,

and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He is also the Custodian of Enemy Property.

The Department administers affairs relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents, governmental and parliamentary translations, and the National Museum.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister responsible for the Centennial Commission and the office of the Queen's Printer (Publisher) and is the spokesman in Cabinet and Parliament for the Board of Broadcast Governors, the Canada Council, the Canadian Broadcasting Corporation, the Chief Electoral Officer, the Civil Service Commission, the Economic Council of Canada, the National Film Board, the National Gallery, the National Library, the Public Archives and the Representation Commissioner.

Tariff Board.—Constituted in 1931 under the Tariff Board Act (SC 1931, c. 55), the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.—The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148 as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman and five other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is completely separate and independent of the Department of National Revenue.

Department of Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents—five in the West Indies, two in Great Britain and one in France—who served on a part-time basis and were responsible to the Minister of Finance. A Canadian Commercial Agent was appointed at Sydney, Australia, in 1895, as the first full-time salaried agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. There are now 173 Trade Commissioners serving at Headquarters and abroad in 63 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where a Trade Commissioner is a member of a mission maintained by the Department of External Affairs, he holds diplomatic status and is known as a Minister (Commercial), Commercial Counsellor or Commercial Secretary.

The Department provides a wide range of services to Canadian business men through the Agriculture and Fisheries Branch, the Canadian Government Exhibition Commission, the Canadian Government Travel Bureau, the Industrial Raw Materials Branch, the Manufactured and Engineering Products Branch, the Office of Trade Relations and Trade Policy, the Trade Services Branch, the Trade Commissioner Service, the Trade Fairs and Missions Branch, the Trade Publicity Branch, the Standards Branch, the Economics Branch and the Grain Division.

The following boards, commissions, Crown corporations and agencies report to Parliament through the Minister of Trade and Commerce: the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the National Energy Board, the Canadian Wheat Board, the Northern Transportation Company Limited, Eldorado Aviation Limited, Eldorado Mining and Refining Limited and the Canadian Corporation for the 1967 World Exhibition.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services—Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, the Canadian Coast Guard, and direct supervision over 300 public harbours; 11 other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of the Telecommunications and Electronics, Civil Aviation, and Meteorological Branches. The work of the Telecommunications and Electronics Branch includes the administration of national and international radio laws, regulations and agreements; it is also responsible for the construction, installation, maintenance and operation of aeronautical, marine and meteorological radio-communication stations and of radio and electronics aids to marine and air navigation.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: Air Canada, the Air Transport Board, the Board of Transport Commissioners, the Canadian Maritime Commission, the National Harbours Board, the St. Lawrence Seaway Authority, the Canadian Overseas Telecommunication Corporation, the Canadian National Railways, and the Atlantic Development Board.

Treasury Board.—The Treasury Board was first established by Order in Council PC 3 of July 2, 1867 and was made statutory in 1869. Its powers and duties are now governed by the Financial Administration Act (RSC 1952, c. 116 as amended). Serving as a committee of the Queen's Privy Council for Canada and consisting of the Minister of Finance as Chairman and five other members of the Privy Council, it deals with all matters relating to finance, revenues, estimates, expenditures and financial commitments, accounts and personnel establishments referred to the Board by the Governor in Council or on which the Board considers it necessary to act under the Financial Administration Act or any other Act. The practice of having a Board of Ministers co-ordinating financial measures and reviewing constantly the Government's spending program is unique.

The administrative staff of the Treasury Board constitutes a main division of the Department of Finance and is directed by an Assistant Deputy Minister of Finance named to be the Secretary of the Treasury Board.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340), is a statutory body responsible to the Minister of Veterans Affairs for the administration of the Act and for the administration of Part XI of the Civilian War Pensions and Allowances Act relating to certain groups of civilians who performed meritorious service in either World War I or II. It consists of three to ten members (three to five permanent, up to three temporary, and up to two additional without pay) appointed by the Governor in Council. Its functions include the responsibility of ensuring that all 19 District Authorities located in various regions throughout Canada interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body and may consider an appeal of an appellant against the decision of a District Authority.

Section 3.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial

and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Twelve departmental corporations are listed in Schedule B to the Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)

Atomic Energy Control Board

Canadian Maritime Commission

Director of Soldier Settlement

The Director, The Veterans' Land Act

Dominion Coal Board

Economic Council of Canada

Fisheries Prices Support Board

Municipal Development and Loan Board

National Gallery of Canada

National Research Council

Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Atlantic Development Board set up under the Atlantic Development Board Act (assented to Dec. 20, 1962).

Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

- Atomic Energy of Canada Limited
- Canadian Arsenals Limited
- Canadian Commercial Corporation
- Canadian National (West Indies) Steamships Limited
- Canadian Patents and Development Limited
- Centennial Commission
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- National Battlefields Commission
- National Capital Commission (formerly Federal District Commission)
- National Harbours Board
- Northern Canada Power Commission (formerly Northwest Territories Power Commission)
- Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

- Air Canada (formerly Trans-Canada Air Lines)
- Canadian Broadcasting Corporation
- Canadian Overseas Telecommunication Corporation
- Central Mortgage and Housing Corporation
- Eldorado Aviation Limited
- Eldorado Mining and Refining Limited
- Export Credits Insurance Corporation
- Farm Credit Corporation (formerly Canadian Farm Loan Board)
- National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
- Northern Transportation Company Limited
- Polymer Corporation Limited
- St. Lawrence Seaway Authority
- Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act, which replaced the Agricultural Prices Support Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Air Canada.—Formerly Trans-Canada Air Lines, the Corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

Atlantic Development Board.—The Act establishing this Board (SC 1962-63, c. 10) received Royal Assent on Dec. 20, 1962. The Board is composed of a chairman and four other members appointed by Order in Council and reports to Parliament through the Minister of Transport. Its functions are to inquire into and report upon measures and projects for fostering the economic growth and development of the Atlantic Region of Canada and to assess and make recommendations with respect to particular projects referred to it by the Minister.

Atomic Energy Control Board.—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Bank of Canada.—Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 115.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation of a Chairman, a Vice-Chairman and 19 other members, a Director and an Associate Director

operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada; its work is financed by a \$50,000,000 University Capital Grants Fund and the earnings from a \$50,000,000 Endowment Fund. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State. (See footnote, p. 115.)

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plants and equipment. Among the items it now manufactures are propellants and explosives, small arms and a wide variety of ammunition and components. Its divisions, together with the locations of their plants, are as follows: Dominion Arsenal Division (Quebec City and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Small Arms Division (Long Branch, Ont.). The Company is responsible to Parliament through the Minister of Industry.

Canadian Broadcasting Corporation.—The new Broadcasting Act, 1958 continues the CBC as a Crown corporation for the purpose of operating a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of 11 Directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Corporation reports to Parliament through a Minister of the Crown (at present the Secretary of State). The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors are appointed for periods of three years and may serve two consecutive terms. The President is the chief executive of the Corporation and, with the Vice President, is responsible for the conduct of the affairs of the Corporation. As the chief executive, the President receives, interprets and applies the policies and directives of the Directors of the Corporation and establishes administrative and operating policies to control the activities of all operating units—English Networks, French Networks, Regional Broadcasting and the International Service, and of corporate staff departments, i.e., Programming, Personnel and Operations, Corporate Affairs, Engineering and Technical Services, and Finance.

In practice, attention of the President is primarily directed at the broader operating and administrative policy fields including reporting on activities to the Directors of the Corporation and the conduct of relations with Parliament, the Board of Broadcast Governors and the public; the Vice President assists the President in his role of chief executive by assuming primary responsibility for the current operations of the Corporation.

The Corporation's Head Office is situated in Ottawa with Headquarters for English Networks in Toronto and for French Networks in Montreal and with Regional Headquarters in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and for the International Service in Montreal.

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946, by the Canadian Commercial Corporation Act (RSC 1952, c. 35). Its principal purpose is to assist in the development of trade between Canada and other nations by acting on behalf of the Canadian Government as the contracting agency when other countries wish to purchase defence or other supplies and services from Canada on a government-to-government basis. The Corporation may enter into transactions under the provisions of the Act for any department or agency of the Government of Canada.

The Corporation is responsible to Parliament through the Minister of Industry. Management and staff are provided by the Department of Defence Production.

Canadian Corporation for the 1967 World Exhibition.—This Corporation was established by Act of Parliament (SC 1962-63, c. 12) to plan, organize, hold and administer the Canadian Universal and International Exhibition, Montreal 1967, to be held on the occasion of the Centenary of Canadian Confederation. The Exhibition is one of the First Category, and Canada is the first country in the Americas to hold such an exhibition under a franchise of the International Bureau of Exhibitions.

The Exhibition, known as EXPO '67, will be held in Montreal Apr. 28 to Oct. 27, 1967, on a site prepared by the City in three main areas grouped around historic St. Helen's Island in the middle of the St. Lawrence River. The theme, "Man and His World", is purported to demonstrate how, through the ages, man has met the challenge of his environment.

The Corporation is headed by a Commissioner General and President; a Deputy Commissioner General and Vice President; and a General Manager. It reports to Parliament through the Minister of Trade and Commerce. The present address of the Corporation is Place Ville-Marie, Montreal; the telephone number is EXPosition 1967; and the cable address is Montexpo.

Canadian Maritime Commission.—This Commission was created in 1947 by the Canadian Maritime Commission Act (RSC 1952, c. 38). It considers and recommends policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship-repairing industry. The Commission administers the Ship Construction Assistance Regulations established by Order in Council PC 1961-1290 passed Sept. 8, 1961 and the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43). It also administers steamship subsidies voted by Parliament. Other functions include advice to other government departments on their shipbuilding requirements, consultation with the Department of National Revenue in the administration of the laws relating to the coasting trade of Canada and the co-ordination of the overseas movement of men and material for the Department of National Defence. It has responsibility in international matters relating to merchant shipping, such as NATO, IMCO and other international bodies. The Chairman has the status of a Deputy Minister and the Commission reports to Parliament through the Minister of Transport.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a Chairman and Board of Directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The primary purpose of the Company, which is a subsidiary of the National Research Council, is to make available to industry, through licensing arrangements, commercial inventions originating in the NRC laboratories. The Company also handles inventions referred to it from the research establishments of Federal Government departments and agencies, Canadian universities, and provincial research councils. Any profits that the Company may derive from licensing arrangements are used for further research and development. The Company's Board of Directors is composed of representatives of the National Research Council, government departments and agencies, industry and the universities. The Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 115). It reports to Parliament through the Minister of Trade and Commerce.

Centennial Commission.—The Centennial Commission is a Crown corporation established by Parliament (SC 1960-61, c. 60 as amended) and responsible for the co-ordination and administration of projects relating to the Centennial of Confederation in Canada. It consists of a Commissioner, an Associate Commissioner and not more than 12 directors, each of whom is appointed by the Governor in Council. The Commission is responsible to Parliament through the Secretary of State.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders and makes direct loans for home-ownership and rental housing; guarantees home improvement loans made by banks; undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and

subsidies for public housing projects; makes loans for land assembly projects to be used for public housing; makes loans for limited-dividend, low-rental housing projects; makes loans for university housing projects and to provinces and municipalities for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Postmaster General.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Industry.

Defence Construction (1951) Limited.—This company was established by letters patent in 1951 to take over the general undertakings of Defence Construction Limited. It is primarily responsible for the calling and review of tenders, the award of contracts, and the supervision of work in the field for all major defence construction contracts. This covers five broad phases of work in the following categories: (1) defence projects in Canada for the Department of National Defence; (2) defence projects in France, Belgium and Germany for the Department of National Defence under the NATO agreement; (3) maintenance and repair contracts at Department of National Defence sites throughout Canada; (4) defence construction for the United States Government in Canada (except on leased bases and the DEW Line); and (5) advice and assistance concerning capital assistance projects of the Department of Defence Production and projects for the External Aid Office of the Department of External Affairs. It is responsible to Parliament through the Minister of Industry.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal, including those under the Atlantic Provinces Power Development Act (SC 1957-58, c. 25). It also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended).

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. The function of the Board is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the federal and Alberta governments, are co-ordinated by the federal Department of Forestry.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry. (See footnote, p. 115.)

Economic Council of Canada.—This Corporation, established under legislation passed on Aug. 2, 1963 (SC 1963, c. 11), consists of a full-time Chairman and two full-time Directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of

economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium and long-term economic prospects and problems. The Council reports to Parliament through the Secretary of State.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Trade and Commerce.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Trade and Commerce.

Export Credits Insurance Corporation.—This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up in July 1947 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 115.)

Municipal Development and Loan Board.—The Act establishing this Board (SC 1963, c. 13) received Royal Assent on Aug. 2, 1963. The Board comprises a Chairman and four other members, appointed by the Governor in Council, and reports to Parliament through the Minister of Finance. The Board makes loans to municipalities to assist in the construction of additional municipal capital projects, providing increased employment. In four provinces, by agreement, the Board makes these loans to the province, which makes similar loans to its municipalities.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Capital Commission.—This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission. The Commission is served by a full-time paid Chairman and comprises a total of 20 members representative of the ten provinces of Canada. There is a staff of seven officials reporting to a general manager, and a work force that fluctuates between 500 and 700, depending on the season.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then

Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development, care and display of the national art collections. Its services to the public include the operation of a large reference library on the history of art and related subjects; the operation of an Exhibition Extension Service through which travelling exhibitions, lectures and the showing of art films, and guided tours of the Gallery at Ottawa are conducted; and the production of art publications and reproductions.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Research Council.—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors Associate Committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. The Council also has the duty of advising the Committee of the Privy Council on Scientific and Industrial Research on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 119). The National Research Council consists of a President, three Vice Presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Industry).

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 to provide electric power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give authority to the Commission to provide similar services in the Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a Chairman and two members appointed by the Governor in Council. The Commission operates four hydro-electric plants, two of which are located in the Northwest Territories on the Snare River near Yellowknife, and two in the Yukon Territory on the Yukon River at Whitehorse and on the Mayo River near Mayo, and diesel electric plants at Fort Smith, Fort Simpson, Fort Resolution, Aklavik and Frobisher Bay, N.W.T., and Field, B.C., and a diesel power and central heating plant and water supply and sewerage systems at Inuvik, N.W.T.; the Commission also operates, on behalf of the Department of Northern Affairs and National Resources, a small diesel electric and heating plant at Fort McPherson, N.W.T., and a central heating plant and domestic water supply system at Fort Simpson, N.W.T.

The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Trade and Commerce.

Office of the Representation Commissioner.—This Office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c.40) and is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. In addition, it is required to make a review and study methods of registration of electors and absentee voting used in elections of other countries; it reports to Parliament through the Secretary of State.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of government war-built ships. This work is completed but the Company remains available to carry out any appro-

private duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 119). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The Corporation's principal plant is located at Sarnia, Ont., with specialty rubber and butyl plants in France and Belgium, respectively. The Corporation is responsible to Parliament through the Minister of Industry.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice President and a member, and reports to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273) for the purpose of administering the Act and providing a National Employment Service. It is composed of three Commissioners appointed by the Governor in Council, of whom one is designated Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

Section 4.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to \$1.50 per copy, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.—As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the merit system in the Civil Service of Canada and is also concerned with many other aspects of personnel administration. The Civil Service Commission was established in 1908 under the provisions of the Civil Service Amendment Act of that year which introduced the principle of selection by order of merit for positions in Ottawa. Prior to that, a Board of Examiners (established in 1882) held qualifying examinations for appointment to the service but it did not have the power to appoint. In 1918, the Civil Service Amendment Act was superseded by a Civil Service Act which had the effect, among other things, of bringing positions outside of Ottawa, as well as those at headquarters, under the jurisdiction of the Act and consequently the Commission. This Act served Canada and the civil service well for over four decades until with the passage of time it, too, was in need of substantial amendment. This was accomplished through a new Civil Service Act which received Royal Assent in September 1961 and which came into effect on Apr. 1, 1962.

The new Act applies to about 138,000 employees in all the departments and certain agencies of government and this constitutes the 'civil service' within the legal meaning of that term. The 'public service' is defined as those departments and agencies listed in Schedule A of the Public Service Superannuation Act which embrace about 190,000 employees including the 138,000 under the Civil Service Act and Schedule A of the Financial Administration Act. This definition of public service does not include certain Crown corporations—for example, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. Agencies outside the civil service make their own arrangements, in accordance with various statutes, for the selection and employment of staff.

Recruitment.—The recruitment of civil servants under the Civil Service Act is conducted by means of open competitive examinations through which every citizen has the opportunity to compete for positions in the service of his country. Examinations are held periodically as staff requirements of the civil service dictate. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of the larger post offices, offices of the National Employment Service, offices of the Civil Service Commission and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in civil service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the veterans' preference. The preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World Wars I or II or in the Korean theatre of operations. The highest order of preference is the disability preference accorded to pensioners of the Armed Forces.

The operations of the Civil Service Commission are decentralized to a considerable degree and the Commission now has ten district offices and six sub-offices across the country. These offices have a significant measure of autonomy enabling them to give quick and efficient service to the field agencies of departments which comprise almost three quarters of the civil service.

Each year the Civil Service Commission conducts about 10,000 competitions, receives about 180,000 applications and makes about 23,000 appointments, mainly to offset the turnover occasioned by deaths, retirements, resignations and the other forms of attrition. One feature of its recruiting program is the annual selection of 600 or more university graduates. There are some 10,000 university graduates in the civil service and, of course, many more in agencies and corporations not under the Civil Service Act.

Promotion.—It is a prime feature of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is in operation. Promotion competitions are of two kinds, inter-departmental and departmental. The former are open to employees of all departments and agencies and are conducted by the Civil Service Commission. The latter, the departmental competitions, are restricted to employees of one department or a portion of a department and are conducted by the departments themselves subject to the provisions of the Act and its Regulations. The Commission maintains liaison with departments to ensure this and to advise departments on administration in this area. It is also provided in the Act that persons employed in the public service outside the civil service, and members of the Armed Forces and the Royal Canadian Mounted Police, may also be considered in promotion competitions where it is thought necessary to do so to attract persons with a high level of skill or ability

to positions in the civil service. Each year approximately 6,000 promotion competitions are conducted and about 20,000 employees are promoted, including 5,500 reclassifications. For those employees who feel that their qualifications have not been properly assessed, appeals are conducted under the jurisdiction of the Commission.

Position Classification.—Provision is made in the Civil Service Act for the classifying of positions in the civil service. Positions with like duties and responsibilities are classified alike and remunerated equally; each has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of a similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility. There are some 1,500 classes and grades in the civil service and the Commission is constantly reviewing them to ensure that the specifications are accurate. Position classification is a mainspring in the Commission's primary function of recruitment, involving as it does the fixing of standards of qualification for each class of position.

Salary Determination.—It is also a responsibility of the Civil Service Commission to recommend to the Governor in Council rates of pay for each class and grade in the civil service. In order that its recommendations may be soundly based, the Commission has established a Pay Research Bureau which provides objective information on compensation and working conditions for various occupations in government, business and industry. These data are studied in relation to comparable classes in the civil service and in combination with other relevant factors—such as the need to recruit and retain sufficient staff, and in the light of the relationship of one class to another—and after this process is complete a recommendation is submitted to the Governor in Council for consideration. The Governor in Council also fixes the salaries for those employees who are not under the Civil Service Act.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. To meet this need the Commission has created a Management Analysis Division and an Organization Division to study problems of management in collaboration with officials directly responsible for major areas of administration. These Divisions afford practical assistance to departments and other agencies of the Government through the systematic examination of structures, operations, procedures and work methods. Their facilities are offered free of charge to all departments.

Staff Training.—In 1947 the Commission set up a Staff Development and Training Division to promote and guide a systematic service-wide training scheme. The training scheme sponsored by the Commission is a joint venture undertaken in co-operation with the various departments, most of which have parallel training divisions. The Commission's Staff Development and Training Division is primarily a co-ordinating agency. It promotes and organizes training activities, trains departmental instructors in the presentation of courses, prepares and gives certain courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs and acts as a general clearing-house for the exchange of information on training matters.

Employee Relations.—The Civil Service Act confers on appropriate staff associations the right to be consulted on matters of remuneration and conditions of employment. This consultation may be initiated by either the official or staff sides and may take three forms. On questions of remuneration, which include certain allowances as well as pay, the consultation takes place between the associations and the Minister of Finance or such members of the public service as he may designate and this may, of course, include members of the Commission. On terms and conditions of employment as enumerated in Sect. 68 (1) of the Civil Service Act (which are mainly those with a fiscal effect, such as leave), the consultation takes place between the associations and the Commission and such members

of the public service as the Minister of Finance may designate. On those terms and conditions of employment that come within the exclusive jurisdiction of the Commission, the consultation takes place between the associations and the Commission alone. This form of tripartite consultation was introduced on Apr. 1, 1962 when the new Civil Service Act came into force and is designed to be consistent with the distribution of authority in the Act.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 6 cover employees in the first category and Table 7 covers employees in the second category.

Departmental Branches, Services and Corporations.—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

¹ Excludes Christmas overtime pay of Post Office employees.

² Includes retroactive payments resulting from the salary revision effective Oct. 1, 1961.

Table 4 presents metropolitan area data on staff employed in departmental branches, services and corporations. The 17 metropolitan areas listed are those defined for purposes of the 1961 Census of population. Included are employees who work within the boundaries of the metropolitan areas; employees residing within those areas but working outside are excluded.

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

Table 6 is an administrative analysis of departmental branches, services and corporations, showing data for these bodies as they were organized at Mar. 31, 1963. Because of periodic changes in the administrative structure of the Government, comparisons over a period of years should be based on the classification by function given in Table 5. Although most salaried staffs fluctuate little during the year, the Taxation Branch of the Department of National Revenue increases its staff considerably in March and April because of the heavy flow of income tax returns during that period, the Legislation branches employ extra staff during each session of Parliament, and several departments employ considerable numbers of students in the summer months. Prevailing rate and other types of employment generally reach a peak in numbers during summer and decline to a lower level in winter.

5.—Federal Government Employees as at Mar. 31, 1963, and Regular Earnings for the Year Ended Mar. 31, 1963, classified by Function

Note.—Excludes agency and proprietary corporations and other agencies, figures for which are given in summary form in Table 7.

PART V.—CANADA'S EXTERNAL RELATIONS[§]

Canada's Status in the Commonwealth.—The Imperial Conference held in London in 1926 marked a turning point in the history of the then British Empire and was an important step in the evolution from an Empire to a Commonwealth. At the 1926 Conference the self-governing countries, consisting of Britain and the Dominions, were described as being "autonomous countries within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". The Governors General of the Dominions were recognized as having in all essential respects the same constitutional position as the Crown in Britain. It was also stated by the Conference that "it is the right of the Government

* Staffed by employees of the National Research Council.

† Included from March 1963.

‡ Staffed by employees of the Defence Research Board and Defence Construction (1951) Limited.

§ Prepared (June 1964) by the Department of External Affairs, Ottawa.

of each Dominion to advise the Crown in all matters relating to its own affairs". Subsequent to this important meeting, Canada's stature and status in the international community continued to grow. Following from the earlier (1923) Imperial Conference, Canada exercised the powers of treaty-making and had established its own diplomatic missions overseas. The Statute of Westminster in 1931 provided more explicit recognition of the principles of equality of status by removing the remaining limitations on the legislative autonomy of Commonwealth countries. As a further development of Canada's independent position, all legal cases started in Canada after Dec. 23, 1949, can no longer be appealed to the Privy Council in London. The Supreme Court of Canada has become, therefore, the final court of appeal for all Canadian legal cases.

Canada's International Status.—The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104; a brief outline is given at p. 107 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1963 and early 1964 with respect specifically to the Commonwealth, the United Nations, and the North Atlantic Treaty Organization. International economic aid programs are covered separately. Although these fields are considered to be the most significant for the purposes of this publication, it should be noted that Canada's activities in other areas are also of importance. The *External Affairs Monthly Bulletin*† covers all activities of the Department.

† Obtainable from the Queen's Printer, Ottawa, \$1 per year.

Section 1.—Diplomatic Representation as at Apr. 30, 1964

NOTE.—Changes in this listing subsequent to Apr. 30, 1964 and names of current representatives are given in *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 35 cents per copy.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address
Argentina.....1941	Ambassador.....	Bartolomé Mitre 478, Buenos Aires
Australia.....1939	High Commissioner.....	Commonwealth Ave., Canberra
Austria.....1952	Ambassador.....	Karntnerring 5, Vienna
Belgium.....1939	Ambassador.....	35, rue de la Science, Brussels
Bolivia.....1961	*Ambassador.....	c/o Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima, Peru
Brazil.....1941	Ambassador.....	Avenida Presidente Wilson 165, Rio de Janeiro
Britain.....1880	High Commissioner.....	Canada House, Trafalgar Square, London S.W.1
Burma.....1958	*Ambassador.....	c/o Office of the High Commissioner for Canada, 44 Ampang Rd., Kuala Lumpur, Malaysia
Cameroon.....1962	Ambassador.....	Immeuble Soppo Priso, rue Joseph Clerc, Yaounde
Central African Republic.....1962	*Ambassador.....	Immeuble Soppo Priso, rue Joseph Clerc, Yaounde, Cameroon
Ceylon.....1953	High Commissioner.....	6 Gregory's Road, Cinnamon Gardens, Colombo
Chad.....1962	*Ambassador.....	Immeuble Soppo Priso, rue Joseph Clerc, Yaounde, Cameroon
Chile.....1942	Ambassador.....	Agustinas 1225, 5th floor, Santiago
Colombia.....1953	Ambassador.....	Carrera 10, 16-92, 8th floor, Bogota
Congo (Brazzaville).....1962	*Ambassador.....	Immeuble Soppo Priso, rue Joseph Clerc, Yaounde, Cameroon

* Dual accreditation; representative not resident in the country.

1.—Canadian Representation Abroad—continued

Country and Year Representation Established	Present Status of Representative	Address
Congo (Leopoldville).....1962	Chargé d'affaires <i>ad interim</i> and Consul.....	Building C.C.C.I., Boulevard Albert 1 ^{er} , Leopoldville
Costa Rica.....1961	Ambassador.....	4th floor, Edificio Banco Anglo Costarri- cense Avenida 2y, Calle 3, San José

Venezuela.....1953	Ambassador.....	The Roxborough, Ottawa
Yugoslavia.....1942	Ambassador.....	17 Blackburn Ave., Ottawa

Section 2.—International Activities, 1963-64

Subsection 1.—Canada and Commonwealth Relations

Membership in the Commonwealth is one of the cornerstones upon which Canadian foreign policy is built, for Canada supports the extension and developments of a strong Commonwealth of Nations and believes that no other association throughout the world has a greater influence for good. Commonwealth membership allows Canada to enjoy an especially close, if perhaps undefinable, relationship with a group of important nations which, despite a diversity of ethnic, economic, racial, religious, cultural and political backgrounds, find usefulness in shared ideals and traditions. Exchanges taking place between Commonwealth countries are characterized by a readiness to understand if not always to agree. Consultations and exchanges of views are the very lifeblood of the Commonwealth; these exchanges are continuous, not only in the capitals of Commonwealth countries but in other capitals, at the United Nations and at international gatherings.

In addition to these continuing consultations at many levels, two special Commonwealth meetings are to be held in 1964. The Third Commonwealth Education Conference is to be held in Ottawa in August of this year, on the invitation of the Canadian Government. This conference is the third of a series of conferences convened primarily to discuss government programs of educational co-operation within the Commonwealth. The Second Conference was held in New Delhi in January of 1962. The Prime Ministers of the Commonwealth will meet in London in July, the twelfth in a series of Prime Ministers' Meetings which have been held at intervals since the end of the Second World War.

During 1963 and early 1964, membership of the Commonwealth increased from 16 to 17 members. Kenya became a member when its independence was achieved in December. Zanzibar achieved independence also in 1963, but in early 1964 joined Tanganyika to form the United Republic of Tanganyika and Zanzibar. In addition, the Federation of Malaya which had become a member of the Commonwealth in 1957, upon the accession of Sarawak, Sabah and Singapore in 1963 became known as Malaysia. At the end of April 1964, Canada had High Commissioners accredited to all member countries of the Commonwealth.

Canada's overseas aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Canada-West Indies Aid Program, and the Special Commonwealth Africa Aid Program (SCAAP). Canada's total contribution under the Colombo Plan since the Plan's inception exceeds \$400,000,000. Canada aided Commonwealth countries in Africa through SCAAP to a total of \$10,500,000 for the period 1960-63. Approximately \$12,000,000 was made available for aid and technical assistance to Commonwealth Caribbean countries from 1958 to 1963.

Canada is also an active participant in the Commonwealth Scholarship and Fellowship Plan. At the end of April 1964, there were approximately 220 Commonwealth students in Canada under this Plan and many Canadians were studying in other Commonwealth countries. Canada has also played a significant part in the training and provision of teachers for service in Commonwealth countries and has assisted in plans for co-operation in technical education. As of the end of April 1964, 183 Canadian teachers were serving under Canadian Government aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area.

Any chronicle of Commonwealth events for the year 1963-64 must include the visits paid to Canada by distinguished citizens of other Commonwealth countries. In addition to the visit of H.R.H. Princess Alice in September 1963, Commonwealth visitors included the Prime Minister of Britain, the Rt. Hon. Sir Alec Douglas-Home; the Prime Minister of Australia, the Rt. Hon. Sir Robert Menzies; the Prime Minister of Trinidad and Tobago, the Rt. Hon. Dr. Eric Williams; His Excellency the Governor of the Eastern Region of Nigeria, Sir Francis Ibiham; the Deputy Prime Minister of Malaya, Mr. Tun Razak; the Deputy Prime Minister of Australia, the Rt. Hon. J. McEwen; the Secretary of State for Foreign Affairs of Britain, the Rt. Hon. R. A. Butler; the Secretary of State for Common-

wealth Relations of Britain, the Rt. Hon. Duncan Sandys; the Minister of Economic and Defence Co-ordination of India, Mr. T. T. Krishnamachari; the Minister for External Affairs of Pakistan, Mr. Z. A. Bhutto; and the Minister of Education of Southern Rhodesia, the Hon. J. H. Howman.

Subsection 2.—Canada and the United Nations

During 1963, developments at the United Nations reflected the improved international atmosphere. In contrast to the mood of crisis which pervaded the United Nations during the Cuba crisis of 1962, the mood of the eighteenth regular session was optimistic and relaxed, due in part to the partial test-ban treaty, the agreement against stationing weapons of mass destruction in outer space and the general lessening of east-west tensions. In the course of the year, the United Nations operation in West New Guinea was successfully concluded. The Yemen Observation Mission (UNYOM), with a Canadian component, was established on Security Council authority.

The United Nations General Assembly convened twice in 1963; the fourth special session in May-June, and the eighteenth regular session starting on Sept. 19. The special session was called to consider the report of the Working Group of 21 on peace-keeping finances, and to study the critical financial problems facing the organization. At the eighteenth session, two new Commonwealth members were admitted, Kenya and Zanzibar; their applications for membership were co-sponsored by Canada.

The continuing increase in the membership of the United Nations has generated a need to reconsider certain aspects of the organization of the United Nations, especially the composition of the Security Council and the Economic and Social Council (ECOSOC). Canada's Prime Minister, in his address to the General Assembly on Sept. 19, spoke vigorously in support of the enlargement of these councils, in order to adequately reflect the present membership of the United Nations. He also advanced a number of practical proposals for strengthening the peace-keeping capacity of the United Nations.

The gravest problem facing the United Nations at both the special session and the regular session was that of the Organization's financial situation. Certain member states continued to refuse to pay their assessments to the United Nations peace-keeping operations in the Congo (ONUC) and the Middle East (UNEF), bringing the United Nations to the brink of financial insolvency. Canada played an active and leading role in the search for a solution to this problem, both in the Working Group of 21 and at both sessions of the Assembly. Canada argued vigorously for long-term financing arrangements based on collective responsibility and capacity to pay. The question was not resolved at the eighteenth session and remains the most serious difficulty facing the United Nations.

Members of the General Assembly welcomed the partial test-ban treaty and adopted a resolution calling on all states to become parties to it and, as well, unanimously adopted a resolution intended to prevent the orbiting of nuclear weapons in outer space. In the Special Political Committee, Canada initiated a resolution to continue study of the effects of atomic radiation on man and his environment, which was adopted by the Committee and the Plenary. Canada continued to stress the need for international co-operation to reduce the hazard from atomic radiation.

Colonial questions continue to preoccupy the United Nations. In 1963, the Special Committee of 24 considered the implementation of the Colonial Declaration in relation to 26 dependent territories. The General Assembly adopted seven resolutions dealing with Aden, British Guiana and seven other dependent territories. In a further resolution, the Special Committee was asked to continue to find the best way to apply the Colonial Declaration to all territories that had not yet attained independence.

During 1963, Canada was a member of a Preparatory Committee established to study the desirability of designating 1965, the twentieth anniversary of the United Nations, as International Co-operation Year (ICY). A resolution to that effect was passed unanimously at the eighteenth session, and Canada was named to the Committee for ICY.

Social questions were actively considered at the eighteenth session. At that time, the General Assembly unanimously adopted a declaration on the elimination of all forms of racial discrimination. Canada, as a member of the Commission on Human Rights, participated actively in discussions on international covenants on human rights. Canada sought, however, to ensure that in the pursuit of these aims no other basic rights should be infringed.

At the eighteenth session, the Assembly adopted a number of resolutions on economic questions. The dominating economic theme was the approaching United Nations Conference on Trade and Development (UNCTD), and the developing countries in a 75-nation draft resolution called on the participating states to give consideration to the Joint Declaration of Developing Countries on trade questions. This resolution was adopted unanimously. Increased confidence was shown in the various United Nations voluntary aid and technical assistance programs during the year, with Canada, for example, doubling its pledge to the Special Fund.

Canada submitted detailed comments on four principles of international law under study by the Sixth (Legal) Committee, namely, the principles of non-use of force, peaceful settlement of disputes, non-intervention, and sovereign equality of states. These comments stressed the paramount importance of the United Nations Charter in the progressive development of international law and in the promotion of the role of law among nations.

Despite the United Nations grave financial situation, above-mentioned (aggravated by the failure of certain member states to pay their share of UN peace-keeping operations in the Congo and the Middle East), and its hesitancy to assume additional financial and political burdens, the Cyprus conflict of violence, bloodshed and distrust engendered in the two communities inhabiting the island had reached a very critical stage by the early spring of 1964. The Security Council, on Mar. 4, decided to establish a peace-keeping force in Cyprus. Canada, among the countries approached for assistance, was the first to commit itself definitely to provide troops. Following intense diplomatic activity of Canadian representatives with other national representatives (Sweden, Finland, Ireland and Britain) and with the Secretary-General during the first two weeks of March, the Canadian contingent comprising troops of the 1st Battalion, Royal 22nd Regiment and the Reconnaissance Squadron of the Royal Canadian Dragoons responded speedily and by Mar. 19 were in camp near Nicosia, Cyprus, proudly serving Canada and the United Nations as part of yet another peace-keeping force.

Although Canada has responded promptly to requests, on an *ad hoc* basis, for military assistance in all theatres of United Nations peace-keeping, it is latterly drawing increasingly upon its own considerable experience in this field to provide leadership and encouragement to other member states to consider jointly what can be done to strengthen the long-term capacity of the United Nations to engage in peace-keeping operations.

Canadian Financial Contributions to the United Nations.—Canada's share of the costs of United Nations peace-keeping operations in the Congo and the Middle East amounted to approximately \$2,082,000 (U.S.) in 1963. Canada's share of the remaining expenses of the United Nations in 1963 was 3.12 p.c. of a net budget of \$77,686,050 or some \$2,423,800 (U.S.). During the year, Canada contributed to other programs of the United Nations, to the Specialized Agencies, to the International Atomic Energy Agency, and to the United Nations Association in Canada as follows:—

Special Programs (pledged for 1963)—

	\$
Expanded Program of Technical Assistance.....	2,150,000 (U.S.)
Special Fund.....	2,350,000 (U.S.)
United Nations High Commissioner for Refugees.....	290,000
United Nations Children's Fund.....	800,000
United Nations Relief and Works Agency.....	1,000,000

Specialized Agencies—

Food and Agriculture Organization.....	774,000
International Civil Aviation Organization.....	223,000
International Labour Organization.....	562,000

Specialized Agencies—concluded		\$
Inter-Governmental Maritime Consultative Organization.....	8,000 (U.S.)	
United Nations Educational, Scientific and Cultural Organization.....	612,000	
World Health Organization.....	1,041,000	
Universal Postal Union.....	41,000	
World Meteorological Organization.....	25,000	
International Telecommunication Union.....	148,000	
Others—		
International Atomic Energy Agency.....	243,000	
United Nations Association in Canada.....	12,000	
Total.....	10,279,000	

Specialized Agencies.—Canada is a member of each of the 13 Specialized Agencies of the United Nations. As well, Canada holds membership in the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the United Nations. These Agencies are bodies with wide international responsibilities established by intergovernmental agreement, which act in relationship with the United Nations to carry out the terms of the Charter. Co-ordination of their activities is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. The Committee is composed of the Secretary-General of the United Nations and the executive heads of the Specialized Agencies and the Director-General of IAEA. It considers not only administrative questions common to them all, but planned projects on problems of special urgency to be undertaken jointly by several Agencies.

Food and Agriculture Organization.—The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A 25-member Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters, and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government. Canada's annual contribution to FAO in 1964 and 1965 is to be \$737,247.

The FAO and the United Nations are jointly responsible for the World Food Program, a three-year experimental project that went into operation at the beginning of 1963. The Program provides food aid on a multilateral basis for emergency relief and to promote economic development.

United Nations Educational, Scientific and Cultural Organization.—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in the Organization at the end of 1963 was 113 states and three associate members. The Organization is made up of three principal organs—the General Conference, which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The latest General

Conference was held at the Headquarters of the Organization in Paris in November and December 1962. It approved a budget of \$39,000,000, nearly one third of which is to be devoted to the educational needs of the developing countries. The Canadian assessment rate is 2.98 p.c. The next General Conference will take place in Paris in October 1964. (See also Sect. 5 of Part II of the Education Chapter of this volume.)

International Bank for Reconstruction and Development.—The IBRD or World Bank was founded at the same time as the International Monetary Fund at the Bretton Woods Conference in 1944 to assist the development of productive resources in member countries by extending loans where private capital is not available on reasonable terms and by providing technical assistance. The loans are made from the paid-up subscriptions of member states, from the surplus accumulated by the Bank and from loans raised in the markets of member states. The subscribed capital is \$21,130,000,000 (U.S.). The Bank's first loans were for European postwar reconstruction but in 1948 the Bank turned to lending for development and an increasing proportion of its funds has been directed to the less-developed areas of the world. By Mar. 31, 1964, the Bank had made 376 loans totalling some \$7,738,000,000 (U.S.) in 64 countries or territories. About \$5,853,000,000 of this had been disbursed, and \$2,481,000,000 had been either repaid to the Bank or sold to other investors. Up to that date, the Bank had used or been able to allocate for lending the equivalent of approximately \$1,704,000,000 from paid-in capital, including the full \$75,000,000 of the paid-in portion of Canada's subscription.

The International Finance Corporation.—The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Of a total capital subscription of \$99,000,000 (U.S.), Canada has provided \$3,600,000.

International Development Association.—The IDA, also an affiliate of the IBRD, was established in September 1960 to meet the situation of a growing number of less-developed countries whose need for and ability to make use of outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to date have each been for a term of 50 years, bearing no interest. As of Mar. 31, 1964, total initial subscriptions amounted to \$986,000,000, of which \$767,000,000 was to be paid in convertible form including Canada's share of \$37,800,000 (U.S.). Additional contributions to be paid in over the three years 1965-68 (subject to legislative authorization) will amount to \$750,000,000 (U.S.), of which Canada's share will be \$41,700,000 (U.S.). IDA began operations in November 1960 and extended its first development credit in May 1961. By the end of March 1964, it had extended a total of 50 development credits amounting to \$604,350,000 to 20 countries in Africa, Asia, the Middle East and the Western Hemisphere, and some \$160,000,000 of this had been disbursed.

International Civil Aviation Organization.—The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the United Nations with headquarters in Canada. Canada is a member of the 27-nation Council which meets in almost continuous session in Montreal.

International Labour Organization.—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a Specialized Agency of the United Nations in 1946. It brings together representatives of governments, employers and workers from 110 member states in an attempt to promote social justice by improving working and living conditions in all parts of the world. To further this goal, numerous meetings are held each year, including the regular International Labour

Conference each June in Geneva. ILO is responsible for a number of technical programs, financed by the United Nations Special Fund and the Expanded Program of Technical Assistance, as well as training projects under its regular budget.

Inter-Governmental Maritime Consultative Organization.—Canada, as a member of the Inter-Governmental Maritime Consultative Organization (IMCO) with headquarters in London, England, was represented at the regular sessions of the Council held in London during 1963 and at the Third Assembly of the Organization which was held in October 1963.

International Monetary Fund.—The International Monetary Fund, set up by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems. Included in these purposes are the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$15,620,000,000 (of which the equivalent of approximately \$10,000,000,000 is in gold and convertible currencies) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangement to Borrow.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the United Nations, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The Administrative Council of the ITU met in Geneva in the spring of 1963; Canada was represented at that meeting and at meetings of subsidiary bodies which took place during the year.

Universal Postal Union.—One of the oldest and largest of the Specialized Agencies, the Universal Postal Union (UPU), was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, activities of the Union are carried on by an Executive and Liaison Committee, a Consultative Committee on Postal Studies and an International Bureau. At the Congress held in Ottawa in 1957, Canada was elected to the Executive and Liaison Committee. The fifteenth Congress which should have been convened in 1962 was held in Vienna from May 29 to July 10, 1964.

World Health Organization.—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the United Nations, having a membership of 108. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six Regional Committees), WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The fourteenth World Health Assembly was held in Geneva in May-June 1962. (See also the item "International Health" in Subsect. 5, Sect. 1, Part I of the Public Health, Welfare and Social Security Chapter of this volume.)

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the United Nations since 1951 but developed from the International Meteorological Organization, which was founded in 1878. The Director of Meteorological Services, Department of Transport, is an elected member of the Executive Committee of WMO. The World Meteorological Conference is the main body of the Organization and meets at intervals of about four years. The Fourth WMO Congress met during April 1963 and Canada was represented by a delegation led by the Director of Meteorological Services.

The International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the United Nations. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways.

Because Canada is considered to be one of the five members most advanced in nuclear technology, including the production of source materials, this country has served on the Board of Governors since the inception of the Agency. The latest meeting of the IAEA General Conference was held at the headquarters in Vienna in September 1963.

In 1963, as part of Canada's support of Agency activities, Atomic Energy of Canada Limited arranged to donate a \$30,000 Gammacell for research purposes at the Agency laboratories in Vienna.

The International Law Commission.—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Canada's Under-Secretary of State for External Affairs, was elected to membership of this Commission. The 25 countries whose nationals form, at present, the International Law Commission are: Afghanistan, Argentina, Austria, Brazil, Cameroon, Canada, China, Dahomey, Ecuador, Finland, France, Britain, India, Iraq, Israel, Italy, Japan, Nigeria, Poland, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

Subsection 3.—Canada and the North Atlantic Treaty Organization*

There were two Ministerial Meetings held during 1963 and meetings at NATO Headquarters in Paris of the Permanent Representatives of the North Atlantic Council were held continuously throughout the year.

Ottawa was the site for the annual Spring Ministerial Meeting which was held from May 22 to 24 and attended by Foreign Ministers and Defence Ministers of the NATO Alliance. Canada was represented by the Secretary of State for External Affairs and the Minister of National Defence. The Ministers reviewed the international situation and, in particular, the continuing threat to Germany and Berlin, the repercussions of the situation in Cuba, and the recent disquieting events in Laos. The Ministers reaffirmed the importance, in building a peaceful world, of progress toward general and complete disarmament by stages and under effective international control.

The Ministers discussed NATO defence policy and approved the steps taken to organize the nuclear forces assigned or to be assigned to the Supreme Allied Commander Europe (SACEUR). These include notably: (a) assignment of Britain's V-bomber force and three United States Polaris submarines to SACEUR; (b) establishment by SACEUR on his staff of a Deputy responsible to him for nuclear affairs; (c) arrangements for broader participation by officers of NATO member countries in nuclear activities in Allied Command Europe and in co-ordination of operational planning at Omaha; and (d) fuller information to national authorities, both political and military.

The Ministers welcomed these measures to increase the effectiveness of the nuclear capability at the disposal of the Alliance and to improve co-ordination and control of its nuclear deterrent forces and recognized the need to achieve a satisfactory balance between

* The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115. A short review of the events leading up to the establishment of NATO and its subsequent membership is given in the 1960 Year Book at p. 167.

nuclear and conventional arms. They directed the Council in Permanent Session to undertake, with the advice of the NATO military authorities, further studies of the interrelated questions of strategy, force requirements and the resources available to meet them.

The annual Ministerial Meeting held in Paris Dec. 16 and 17, 1963, was attended by a Canadian Delegation led by the Secretary of State for External Affairs and the Minister of National Defence. In reviewing the international situation, the Ministers noted that there had been no major crisis since the confrontation over Cuba. They emphasized that the unity and military strength of the Alliance had contributed substantially to this result and to the international atmosphere now prevailing. At the same time the Ministers emphasized the importance not only of seeking agreement on limited measures which would help to reduce tension, but of achieving a genuine and fundamental improvement in East-West relations. They expressed the hope that Soviet policy would not limit the possibilities of making progress in this direction and of reaching solutions for the problems that are the real causes of tension in the world, in particular those of Berlin and Germany. Despite recent incidents, freedom of access to Berlin had been upheld; in this connection the Ministers reiterated their determination, as expressed in the Declaration of Dec. 16, 1958, to defend and maintain the freedom of West Berlin and its people.

The Ministers reaffirmed their determination to improve and intensify their political consultation on subjects of common concern. They also agreed on the necessity of maintaining and strengthening the defensive capability of the Alliance, having regard to the constant advances in science and technology. They reviewed the implementation of decisions reached at Ottawa regarding fuller information on nuclear questions for national authorities and broader participation by member countries in the organization and operational planning functions of SACEUR's nuclear forces. Finally, they took note of the progress achieved to give effect to the decisions made at Ottawa to pursue the study of the interrelated questions of strategy, force requirements, and the resources available to meet them.

In the economic field, the Ministers noted that the economies of the NATO countries have been expanding steadily and, in contrast to what has been happening in the communist world, the economic systems of the West have shown themselves capable of flexible adaptation to circumstances. Not only has this permitted an increase in the standards of living of their own peoples but it has also enabled large-scale assistance to be extended to the developing countries.

Canadian Contributions to NATO.—Support for NATO during 1963 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the Alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,800,000,000 in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued throughout 1963. This program has decreased in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements.

Subsection 4.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and the raising of living standards of all

countries and territories in the general area of South and Southeast Asia. Its membership now includes Australia, Bhutan, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Malaysia, Nepal, New Zealand, Pakistan, the Philippines, Afghanistan, Maldive Islands, South Korea, Thailand, Britain and Viet Nam, as well as the United States, which is also engaged in a substantial program of economic aid in the same region. Afghanistan and the Maldive Islands were admitted to membership in 1963.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects and exchange views on policy matters. As a consultative body, it makes no collective policy decisions binding member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. Consultative Committee meetings were held at Singapore in 1955, at Wellington in 1956, at Saigon in 1957, at Seattle in 1958, at Jogjakarta in 1959, at Tokyo in 1960, at Kuala Lumpur in 1961, at Melbourne in 1962 and at Bangkok in 1963. At the Jogjakarta meeting it was agreed to extend the Colombo Plan for another five years from June 1961. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

From the inception of the Plan in 1950 through April 1964, Canada made available a total of \$464,670,000 for capital and technical assistance projects in South and Southeast Asia; Parliament appropriated \$41,500,000 for Canadian participation in 1963-64. While ten countries are now receiving capital assistance from Canada, the largest contributions have so far been made to India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs such as industrial metals, asbestos, fertilizer, wheat, flour and butter, from the sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to March 1964 more than 2,500 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 300 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and on the installation and operation of capital equipment.

Commonwealth Caribbean Program.—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year, \$10,000,000 program of economic and technical assistance and continued aid to the area after the dissolution of the Federation; in 1963-64 an amount of \$2,100,000 was made available for Jamaica, Trinidad and Tobago, Barbados, the Leeward and Windward Islands, British Guiana and British Honduras. The Canadian Government announced in November 1963 that a more sizable program for the Commonwealth Caribbean would be introduced in 1964-65.

The major project undertaken by Canada at the request of the federal authorities was the provision of two passenger-cargo ships for inter-island transportation at a cost of nearly \$6,000,000. The vessels were commissioned in the summer of 1961 and handed over to the West Indies Government. Other projects included a deep-water wharf in St. Vincent, a residence hall for the University of the West Indies in Trinidad, port handling equipment for five harbours, schools in three islands, warehouses at two sites and freshwater systems in four islands.

Canada has also given a substantial amount of technical assistance. As of Mar. 31, 1964, training programs had been arranged in Canada for 123 students from the Commonwealth Caribbean. Their fields of study included agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 64 Canadians were sent to the Commonwealth Caribbean; they included teachers, soil surveyors and advisers in statistics, legal drafting, housing, films, radio broadcasting, postal services and harbour management.

Special Commonwealth Africa Aid Program.—In the Fall of 1960 the Canadian Government undertook, subject to parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth Africa Aid Program over a three-year period beginning Apr. 1, 1961. The program, known as SCAAP, arose from discussions at the meeting of Commonwealth Prime Ministers in 1960. Roughly speaking SCAAP is a counterpart in Africa of the Colombo Plan in Asia, although it is entirely a Commonwealth scheme. The main donor countries are Britain, Canada, Australia and New Zealand; some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide limited amounts of technical assistance in the fields in which they have experience and specialized knowledge. All of the Commonwealth areas of Africa, both independent countries and dependent territories, qualify for assistance under this program.

The major endeavour under the SCAAP program has been the provision of technical assistance. Up to Mar. 31, 1964, scholarships and training programs had been provided for study in Canada under SCAAP for 290 African students, and 238 Canadian teachers and technical assistance advisers had served on assignments in ten Commonwealth African countries—Basutoland, Bechuanaland, Gambia, Ghana, Kenya, Mauritius, Nigeria, Sierra Leone, Tanganyika and Uganda. On that date 148 students from Africa were in Canada under SCAAP auspices and 96 teachers and university professors and 47 technical assistance advisers were serving in Commonwealth countries of Africa.

In addition, Canada has participated in several capital projects: an aerial mapping and airborne geophysics survey in Nigeria which began in October 1961 and for which Canada has allocated \$1,850,000; a forest inventory in Kenya for which \$400,000 has been allocated; provision of architectural and engineering services, construction materials and equipment for a trades training centre in Ghana and a secondary school in Sierra Leone; and supply of various types of vehicles and equipment in Ghana, Kenya, Nigeria, Sierra Leone, Tanganyika, Uganda and Zanzibar.

Educational Assistance to French-Speaking States in Africa.—In April 1961, the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa, and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1964. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa and this has continued to be the main priority in the program. Up to Mar. 31, 1964, 30 secondary school teachers and university staff had served in six countries—Cameroon (12), Rwanda (7), Mali (4), Congo (Brazzaville) and Togo (3 each) and Morocco (1); 19 were on assignments at that date. Four training awards for study in Canada have been made available under the program—one each to students from Cameroon, Central African Republic, Congo (Brazzaville) and Niger. Other forms of assistance related to education include provision of Canadian paper worth \$50,000 for a UN textbook production centre in Cameroon and the provision of a number of mobile film units and audio-visual equipment to six countries in Francophone Africa.

The Commonwealth Scholarship and Fellowship Plan.—The Commonwealth Scholarship and Fellowship Plan was first discussed at the Trade and Economic Conference held at Montreal in September 1958. The delegates, in stressing the importance of education and training in the participating countries, expressed the hope that they would be able to share with each other the advantages of education of all kinds and at all levels. The Conference envisaged a scheme of 1,000 scholarships of which Britain undertook to

provide one half and Canada one quarter. The details of the plan were worked out at the Commonwealth Education Conference at Oxford in 1959 and \$1,000,000 has been allocated annually for the implementation of the Plan in Canada.

Since the Plan first became operational during the 1960-61 academic year, 379 scholars have come to Canada for advanced study. As of Mar. 31, 1964, there were approximately 210 scholars in Canada; about one third of these students are expected to return to their home countries before September 1964.

Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.—In addition to the annual contributions made to the United Nations Expanded Program of Technical Assistance, Canada assists by arranging training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1964, approximately 2,000 individuals had come to Canada through the various agencies from more than 100 countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in under-developed countries.

Organization.—As of Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council of that date, and placed in charge of an officer known as the Director General of External Aid Programs. The Director General is directly responsible to the Secretary of State for External Affairs for all matters connected with Canadian external assistance programs, including the Colombo Plan, the Commonwealth Caribbean Program, the Special Commonwealth Africa Aid Program, the Commonwealth Technical Assistance Program, the Commonwealth Scholarship and Fellowship Plan and the Program for French-Speaking African States as well as for operational liaison with aid programs administered by the United Nations and other international agencies.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Census of Population

This Section presents only a limited summary of the voluminous data on population recorded by the 1961 Census of Canada, with certain comparable data from earlier censuses. More detailed information is published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information and Public Relations Division of the Dominion Bureau of Statistics.

Subsection 1.—Growth and Movement of Population*

Population Growth.—Canada's population stood at 18,238,000 in 1961 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, the gain of 34 p.c. was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. During the 1901-11 period, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated 1,000,000. As the total increase in population was 1,835,328, it is evident that there was substantial emigration during the period. In the 1911-21 period, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were a factor in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period (1,612,000) was very close to that for the previous censal period. However, emigration was also extremely high and the increase in population amounted to 1,581,306, representing 2 p.c. per annum compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population, which amounted to 1,588,837, was only 229,000 greater than the natural increase. A

*An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930's, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and a sharp rise in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. While there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. While all provinces gained in population during 1951-61, the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-61

NOTE.—Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131, and census populations for 1956 in the 1961 edition, p. 149.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1941-51, 1951-56 and 1956-61. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

¹ Includes the Yukon and Northwest Territories.

The earlier movement of population in Canada from east to west has not been apparent since the 1920's. Although British Columbia has continued to show population gains from migration since 1931, much of this gain has been at the expense of the Prairie Provinces. While the three Prairie Provinces lost by migration about 267,000 persons between 1941 and 1951, they gained 25,000 in the period 1951-56 and 18,000 in the period 1956-61. Manitoba lost almost 61,000 people between 1941 and 1951 but only 5,000 persons since then. Saskatchewan has been a consistent loser since 1941, losing on the average almost 20,000 a year during the 1940's and around 8,000 a year during the 1950's. Alberta lost only about 7,000 in the decade 1941-51 and gained close to 65,000 in each of the five-year periods 1951-56 and 1956-61. British Columbia gained through migration at the rate of about 23,000 a year during the 1940's, about 27,000 a year in the first half of the 1950's and 21,000 annually in the 1956-61 period. On an absolute basis, Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1941 and 1951 and a considerable gain in the next ten years, due also to immigration. The Maritimes as a whole lost 175,000 persons over the quarter-century.

Subsection 2.—Density of Population

Table 4 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956 and 1961. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 8.66 persons per square mile in Canada as a whole in 1961 compared with 6.65 per square mile in 1951. The greatest increase in the ten years was shown by Ontario where there were 4.76 more persons per square mile, followed by Nova Scotia with an increase of 4.62. However, it should be remembered that all provinces with the exception of the Maritimes have large areas almost devoid of population and that concentrations in other areas are very high.

4.—Land Area and Density of Population, by Province, Census Years 1951, 1956 and 1961

Province or Territory	Land Area	Population 1951		Population 1956		Population 1961

Subsection 3.—Rural and Urban Population

For the 1961 Census, all cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban; also classed as urban were the urbanized fringes of census metropolitan and other large urban areas, and the urbanized fringes of certain smaller cities where the city and fringe totalled 10,000 or more persons. The remainder of the population was classed as rural.

Table 5 classifies the 1961 rural population according to farm and non-farm residence and the urban population by size groups; in the latter classification, each municipality (or part) in an urbanized area is allocated to the same size group as the total urbanized area of which it forms a part. The figures show that, in 1961, almost 70 p.c. of Canada's population were urban dwellers and 53 p.c. lived in or on the fringes of urban centres having a population of 30,000 or more. Only about 12 p.c. lived on farms.

5.—Rural Population classified by Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1961

Province or Territory	Rural			Urban				
	Farm ¹	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total

¹ Excludes 55,615 persons living on farms in localities classed as urban.

Subsection 4.—Populations of Incorporated Urban Centres and Metropolitan Areas

The population of all incorporated urban centres is classified by size group in Table 6 for the census years 1951, 1956 and 1961. During the ten-year period, the number of such urban centres increased by 178 and the proportion of the total population living in them rose from 56.7 p.c. to 60.7 p.c. Although there was a slight decrease in the number of centres having fewer than 1,000 persons, the number with over 50,000 increased from 19 to 29 and the proportion of the total population in these larger centres went up from 27.5 p.c. to 29.0 p.c.; the proportion in centres of from 1,000 to 50,000 increased from 26.1 p.c. to 29.3 p.c. in the same comparison.

6.—Populations of Incorporated Urban Centres, classified by Size Group, Census Years 1951, 1956 and 1961

Size Group	1951			1956			1961

Census metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. Table 8 shows the 1961 population of each area with the corresponding 1951 and 1956 figures for the same area as in 1961. As indicated by the last column, most of these metropolitan areas have shown remarkable increases in population during the decade. In 1961 they accounted for 44.8 p.c. of the total population as compared with 40.2 p.c. in 1951.

8.—Populations of Census Metropolitan Areas, 1951, 1956 and 1961

The 922 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1961 Census are listed alphabetically by province in Table 9 and their populations given for the two census years 1956 and 1961. Each population figure is for the boundary in effect at the time of the respective census.

9.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over in 1961, by Province, Census Years 1956 and 1961

NOTE.—Population totals are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, and v.=village.

Subsection 5.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within a period of heavy immigration; the 1961 ratio was 102. In the older settled provinces east of Manitoba, the ratio varied between 104 in 1911 and 101 in 1961 but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 105 in 1961.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956 and 1961 in Table 10.

Age.—Recent trends in vital rates and immigration have had a considerable effect on the age composition of the Canadian people. A high birth rate together with a low death rate among children added nearly 2,000,000 to the number of persons under 15 years of age between 1951 and 1961, an increase of 46 p.c. The proportion of this group to the total population increased from 30.3 p.c. to 34.0 p.c. in the ten-year period. The population of working age—those of 15 to 64 years of age—increased more slowly at 22.9 p.c. in the decade and the relative proportion of this group declined from 61.9 p.c. to 58.4 p.c. Without the influence of immigration in the 1951-61 period, the proportion of this group would have been much lower since a large part of it consisted of persons born in the low birth rate period of the 1930's. The proportion of persons 65 years of age or over in 1961 was 7.6 p.c. compared with 7.8 p.c. in 1951.

Table 11 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956 and 1961. The provincial distribution by specified age group is given for 1961 in Table 12.

Subsection 6.—Marital Status

After age and sex, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1961, 62.9 p.c. of all married females were in the 15-44 age group compared with 64.3 p.c. in 1956, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

The high birth rate in the 1951-61 period, besides having a notable effect on the general population growth and age composition, has been an influence on the 32.7-p.c. increase in the single population. During the same period, the married population increased by 28.2 p.c. and the widowed by 21.0 p.c. Other striking features are the excess of married males (largely consisting of male immigrants whose wives had not yet joined them) and the great preponderance of widows over widowers.

The marital status of the population in 1961 is shown in Table 13.

Subsection 7.—Ethnic Groups and Birthplaces

Ethnic Group.—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent

that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 14 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 Census.

Subsection 8.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?". Thus it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 17, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 Census.

Subsection 9.—Languages and Mother Tongues

The term "official language" used by the census refers only to the English and French languages.* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in the following special article. Mother tongues of the population are shown in Table 18. The proportion reporting English as their mother tongue in 1961 was 58.5 p.c. (compared with 59.1 p.c. in 1951), French 28.1 p.c. (29.0 p.c. in 1951) and all other mother tongues 13.5 p.c. (11.8 p.c. in 1951).

* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

"Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages."

USE OF THE ENGLISH AND FRENCH LANGUAGES IN CANADA*

At each decennial census, every member of the population is asked whether he or she is able to speak (a) English and (b) French. The information on this subject as recorded on the census schedules is tabulated to show the number of persons who reported ability to speak English but not French, the number speaking French but not English, those able to speak both English and French and, finally, the number unable to speak either of these two languages. In the course of the tabular program, the totals in these four categories are classified by age and sex, by ethnic group and, for the foreign born, by period of immigration.

Out of a total population of 18,238,247 in Canada on the census date, June 1, 1961, 12,284,762 or 67.4 p.c. reported ability to speak English but not French, 3,489,866 or 19.1 p.c. spoke French but not English, 2,231,172 or 12.2 p.c. reported ability to speak both languages, and 232,447 or 1.3 p.c. were unable to speak either English or French. If the 12.2 p.c. of the population who were bilingual (English-French) is added to the number speaking English but not French, and to the group speaking French but not English, it will be found that approximately 80 p.c. of Canada's population in 1961 could speak English and slightly over 30 p.c. were able to speak French.

There has been little change over the past two or three decades in the relative proportions of the English-speaking, the French-speaking, and the bilingual elements in the Canadian population despite the substantial numbers of postwar immigrants, the large-scale population movements within the country, rising levels of education and other factors that might have been expected to have altered the composition of the population with respect to official language. At each census since 1931, just over two thirds of Canada's population have reported ability to speak English but not French, between 17 and 19 p.c. French but not English, and between 12 and 13 p.c. ability to speak both languages.

Regional differences in the ability of the population to speak English, French or both these languages are, of course, rather closely related to the location of Canadians of French and all other ethnic groups, and their relative numbers in specific areas of Canada. A large proportion of the population of French ethnic origin resides in the Provinces of Quebec, New Brunswick and Ontario. Thus, while at the 1961 Census 38 p.c. of the population of New Brunswick were able to speak French, less than 10 p.c. of the people residing in each of the Provinces of Newfoundland, Prince Edward Island and Nova Scotia of the Atlantic region spoke this language. Expressed in another way, although over 90 p.c. of the population of each of the Atlantic Provinces of Newfoundland, Prince Edward Island and Nova Scotia spoke English but not French, the percentage (62 p.c.) in this particular category in New Brunswick was considerably less. If to this category is added persons who were able to speak both English and French it will be seen that 81 p.c. of New Brunswick's population was able to speak English.

In Quebec, precisely the same percentage (62 p.c.) of the population as in New Brunswick spoke one of these languages but not the other, but in this province the situation was reversed with the 62 p.c. speaking French but not English. Only 12 p.c. of Quebec's population spoke English but not French while one quarter or 1,339,000 spoke both languages. Thus 87 p.c. of the population of this province spoke French and 37 p.c. spoke English at the time of the latest census.

The number of French-speaking residents of Ontario at the 1961 Census was 588,506 as compared with 225,549 residing in New Brunswick. Although there were more than twice as many French-speaking persons in Ontario as in New Brunswick, the number in Ontario constituted just under 10 p.c. of the total population of that province in

* Prepared by A. H. LeNeveu, Chief of the Analysis, Immigration and Citizenship Statistics Section of the Census Division, Dominion Bureau of Statistics.

contrast to the 38 p.c. of New Brunswick's population. Consequently in Ontario, as in Manitoba, around 90 p.c. of the population reported ability to speak English but were unable to speak French. It is thus not unexpected that, as in the population as a whole, a high percentage of the postwar immigrants residing in Ontario—which province accounted for well over half of all the 1946-61 immigrants to Canada recorded in the 1961 Census—were able to speak English but only a small number spoke French, the relative numbers in 1961 being 771,482 speaking English and 42,543 speaking French.

In each of the three western provinces of Saskatchewan, Alberta and British Columbia, close to 95 p.c. of the population were able to speak English but not French; in Manitoba the proportion was about 90 p.c. Approximately 95 p.c. of the population of the Yukon spoke English but not French and in the Northwest Territories the proportion was 59 p.c. Because of the substantial numbers of Eskimos in the population of the Northwest Territories, over one third of the population was reported as unable to speak either of these languages.

19.—Numerical Distribution of the Population Speaking One, Both or Neither of the "Official" Languages, by Sex and by Province, Census 1961

NOTE.—See text and footnote re the term "official language" on p. 179.

Among the 2,231,000 persons reporting ability to speak both English and French, certain characteristics stand out. In the first place, a high percentage (80 p.c.) were residents of urban centres, close to 70 p.c. living in the larger cities of 100,000 population or over. Secondly, with three fifths of the bilingual population residing in the Province of Quebec, it is obvious that a substantial proportion of this group were of French ethnic background. Actually 1,666,000 or 75 p.c. of the population speaking both languages were recorded in the 1961 Census as of the French ethnic group. Thirdly, the study of language by age groups reveals a tendency for the percentage of persons able to speak both languages to rise steadily from childhood to around 45 years and decline gradually in the older age groups. This percentage rose from 4 p.c. among children under 15 years of age to 20 p.c. for males between 20 and 45 years. Largely because of the higher proportion of males than females over 15 years in the labour force, the percentage of the latter able to speak both English and French was somewhat lower than for males.

The 1961 Census showed 565,000 persons of other than French origin as able to speak both English and French. Just over 318,000 or 56 p.c. of these were of British Isles origins, 48,000 of Italian, 32,000 of Jewish, 27,000 of German, and 18,000 of Polish ethnic background. Smaller numbers were reported from among a variety of European and Asiatic ethnic groups. As would be expected, the extent to which members of these groups were able to speak both English and French depended quite largely upon the proportion of their number residing in the Province of Quebec or neighbouring communities in which there were large numbers of French-speaking persons. For example, just over half of the 318,000 bilingual persons of British Isles ethnic background resided in Quebec Province. Although only 4 p.c. of the total population in Canada of this numerically largest ethnic group were bilingual, about 30 p.c. of those living in the Province of Quebec could speak both French and English. Similarly, among residents of this province belonging to other ethnic groups those reporting the highest percentages able to speak both languages were: Russian, 38 p.c.; Asiatic, 37 p.c.; Jewish, 36 p.c.; Italian, 35 p.c.; Polish, 32 p.c. and Scandinavian, 31 p.c.

Among the foreign born population, 216,000 or around 8 p.c. had acquired a speaking knowledge of both English and French at the 1961 Census date. Ability to speak both languages among the foreign born was much more evident in Quebec Province than elsewhere, where 28 p.c. of this group reported ability to speak both English and French at the 1961 Census. Among the more recent arrivals in this country, i.e., those who had immigrated to Canada between 1951 and 1961, one quarter of the residents of this province were able to speak both English and French by the date of the latest census.

From what has been said it may be concluded that the degree to which the population of a given province, city, rural or urban area is able to speak both English and French depends to a considerable extent upon the ratio of people of French to non-French origin in the area under observation. In metropolitan centres where a substantial number of bilingual persons are found, this relationship is quite apparent. For example, if the three metropolitan areas of Montreal, Ottawa and Quebec—where the population of French ethnic group rises from around two fifths of the total in Ottawa, to almost two thirds in Montreal and close to 95 p.c. in Metropolitan Quebec—are examined, it will be found that the percentage of the French ethnic group able to speak both languages was highest in Metropolitan Ottawa at 60 p.c., declining to just over 40 p.c. in Metropolitan Montreal and to 23 p.c. in the Metropolitan Quebec area. Hence where there is a lower percentage of the French ethnic group in the total population of these metropolitan areas there is a higher proportion of bilingual persons in the group and, conversely, where a high percentage of the total population is of French ethnic background, such as in Metropolitan Quebec, there is a lower percentage of bilingual persons in that area.

Although the percentage of the population of non-French ethnic groups in these three metropolitan areas who were able to speak both English and French was not as high as for the French ethnic group, the same tendency may be observed. To illustrate, in Quebec Metropolitan Area, not much more than 5 p.c. of the population was of non-French ethnic background. Among this group 52 p.c. were able to speak both French and English at the 1961 Census and in this predominantly French-speaking area another 28 p.c. of this non-French ethnic group spoke French but not English. Thus, in this metropolitan area 80 p.c. of the population reporting ethnic origins other than French were able to speak French. In Metropolitan Montreal where the non-French ethnic groups accounted for around 35 p.c. of the total population, 30 p.c. were able to speak both languages, but in the Ottawa area where approximately 60 p.c. of the population was reported as belonging to non-French ethnic groups, the proportion who were able to speak both French and English was much lower at 11 p.c.

The importance of this factor of the ratio of the French to other ethnic groups in particular types of areas on the ability to speak both English and French is also evident when comparison is made of the extent of bilingualism among the population of the French, on the one hand, and other ethnic groups, on the other, in the rural areas of the Provinces of Ontario and Quebec. Although the population of French ethnic background in rural Ontario is concentrated largely in the eastern and in the northern parts of the province,

almost half of their number were able to speak both languages at the time of the latest census. By contrast, in the rural areas of the Province of Quebec, largely because of the high preponderance of people of the French ethnic group in these areas, less than 10 p.c. of this ethnic group were able to speak both languages. On the other hand, because of the fact that a large majority of the population of rural Ontario are of non-French ethnic groups, only about 2 p.c. of their number were able to speak both languages in 1961 whereas in rural Quebec, where the non-French ethnic group constituted a relatively small percentage of the population, 22 p.c. reported ability to speak both English and French.

It is not possible in this brief review to indicate other factors contributing to differences in the degree to which both English and French are spoken by the population of French and of other ethnic groups throughout Canada. It could well be, however, that for areas with higher or lower degrees of bilingualism among French or other ethnic groups an examination of the historical statistics of the census with respect to periods of settlement of various ethnic groups, educational levels, intermarriage between French and other ethnic groups, types of industries and occupations, and so forth, might help to identify other factors that contribute to differences in this regard.

Subsection 10.—Households and Families

This Subsection contains a summary of the principal statistics on households and families recorded at the 1961 Census; more detailed information may be found in 1961 Census reports relating to households and families (see also p. 159).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1951, 1956 and 1961 in Table 21. The relatively stable average of persons per household indicates an almost equal rate of increase for the dwelling stock as for the population.

* A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

21.—Households and Persons per Household, by Province, Census Years 1951, 1956 and 1961

¹ Exclusive of the Yukon and Northwest Territories.

Table 23 gives two classifications of households. The first is by the number of families* they include. While the proportion of one-family households has remained relatively stable since 1951, that of doubled-up families shows a fairly sharp drop from 6.7 p.c. in 1951 to 3.7 p.c. in 1961, a possible indication of an easing in the housing situation. The proportion of non-family households has increased slightly over the ten-year period—from 11.3 p.c. to 13.3 p.c.

The second classification is by number of lodgers. The percentage of households with lodgers has continued to decrease but at a much slower pace between 1956 and 1961 than during the previous five-year period.

* A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

23.—Households classified by Number of Families and by Number of Lodgers, Census Years 1951, 1956 and 1961

Families or Lodgers	1951		1956		1961	
	No.	P.C. of Total	No.	P.C. of Total	No.	P.C. of Total
Households with—						
0 family.....	385,010	11.3	459,420	11.7	605,801	13.3
1 family.....	2,794,860	82.0	3,259,499	83.1	3,780,992	83.0
2+ families.....	229,425	6.7	204,727	5.2	167,943	3.7
0 lodger.....	3,081,085	90.4	3,610,238	92.0	4,210,953	92.4
1 lodger.....	171,810	5.0	162,067	4.1	207,518	4.6
2 lodgers.....	73,480	2.2	68,950	1.8	67,237	1.5
3+ lodgers.....	83,420	2.4	82,391	2.1	69,028	1.5

The average size of the Canadian family made a further gain between 1956 and 1961, continuing the trend of the 1951-56 period. Every province except Quebec and Saskatchewan participated in this increase, as shown in Table 24.

24.—Families and Persons per Family, by Province, Census Years 1951, 1956 and 1961

Canada.....	3,287,384	3,711,500	4,147,444	3.7	3.8	3.9

Closely related to the number of families per household, and also an indicator of living conditions, is the type of family. In 1961, 94.3 out of every 100 families in Canada were maintaining their own households as compared with 92.3 in 1956 and 90.2 in 1951, an apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories—families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household. Table 25 shows the 1961 distribution of families according to type.

25.—Families classified by Type and by Province, Census 1961

There were 7,777,137 children in families in 1961. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 26, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-school-age children, those of elementary school age, those at the secondary school level, and those of college or working age.

26.—Children Living at Home classified by Age Group and by Province, Census 1961

Two additional family classifications are given in the 1963-64 Year Book at pp. 180-181—families classified by age of head, and families classified by marital status and sex of family head.

Section 2.—Intercensal Surveys

Intercensal estimates of the populations of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter on Immigration and Citizenship, Part I, Section 3) and from the Registrar-General of Britain the number of emigrants from Canada arriving by sea to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowance statistics showing the number of migrant families by provinces are used in estimating interprovincial shifts in population (see Table 3, p. 163).

The following statement shows the data used in preparing the revised population estimates for the years 1957 to 1960 and the annual estimates for 1962, 1963 and 1964. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

Year	Population at June 1	From June 1 to May 31 of Next Year			
		Births ¹	Deaths ¹	Immigrants	Residual ²
	No.	No.	No.	No.	No.

27.—Annual Estimates of Population, by Province, as at June 1, 1951-64

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1951, 1956 and 1961 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-50 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in *Census of Canada 1951*, Vol. X.

Because of the growing interest in the expanding population of the larger metropolitan areas of Canada, estimates for these areas have been prepared as of June 1, 1963. These are shown in Table 28 with the census counts for June 1, 1961; the estimates relate to the boundaries established for the 1961 Census. As in the preparation of intercensal population estimates for provinces, the births occurring in the metropolitan areas between June 1, 1961 and June 1, 1963 were added to the population at the census date, and deaths subtracted. Immigrants over this period reporting these metropolitan areas as places of destination were added and allowances were made for losses in population by emigration. Also, the net in-movement or out-movement caused by internal migration was calculated from family allowance and other data.

The falling off in the rate of population growth for the whole of Canada between June 1, 1961 and June 1, 1963, caused by declining immigration and a slight fall in the birth rate, is also reflected in the growth rate for the metropolitan areas.

Table 29 gives estimates of the population of Canada and the provinces by age group and sex as at June 1, 1963. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 188. These estimates are subject to revision as soon as data from the next census are available.

Section 3.—The Native Peoples of Canada

The Indians*

Approximately one of every hundred Canadians is registered as an Indian by the Department of Citizenship and Immigration. This number includes all persons descended in the male line from a paternal ancestor of Indian identity who have chosen to remain under Indian legislation. In the aggregate, the Indians are grouped into 559 bands and occupy or have access to 2,265 reserves or settlements having a total area of 5,985,107 acres.

About 26 p.c. of the Indians reside away from reserves, including those in the Yukon and Northwest Territories for whom reserves have not been set aside. Many Indians, both on and off reserves, have specialized in various professions, trades and agricultural pursuits. Others have fitted into the economy of the areas in which they live in a wide range of occupations. Some 265 Indians are employed by the Indian Affairs Branch of the Department of Citizenship and Immigration, 123 of them as teachers. In the northern and other outlying areas, hunting, fishing and trapping remain the important means of livelihood for Indians.

Subject to special provisions in the Indian Act, all laws of general application are applicable to Indians. Indians are liable for taxation of property held off a reserve as well as of any income they earn off a reserve. They may vote in federal elections on the same basis as other citizens and in provincial elections where the electoral laws of the provinces permit. Indians are free to enter into contractual obligations and may sue and be sued. However, their real and personal property situated on a reserve is exempt from seizure except on suit by another Indian.

* Revised in the Information Division, Department of Citizenship and Immigration, Ottawa.

30.—Indian Land in Reserves and Number of Bands, by Province, as at Mar. 31, 1964

¹ As at Dec. 31.

The Indian population in each province is classified by age group and sex in Table 32. The rapid growth of that population in recent years is indicated by the fact that in 1963 approximately 58 p.c. of the Indians were under 21 years of age compared with 43 p.c. of the population of Canada as a whole. Religious denominations of the Indian population are given in Table 33.

GROWTH OF THE INDIAN POPULATION
AS COMPARED WITH THE TOTAL POPULATION OF CANADA,
CENSUSES 1941, 1951 AND 1961

Administration.—Pursuant to the British North America Act, the administration of Indian Affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada. Since January 1950, Indian affairs have been the responsibility of a Branch of the Department of Citizenship and Immigration.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, eight regional offices, two district offices in the Province of Ontario and 88 field agencies. Specialists in such matters as education, economic development, resource management, social welfare, and engineering and construction are attached to headquarters and regional staffs. Liaison is maintained with the Indian and Northern Health Services of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians (see p. 277).

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. To this end, the Branch has brought into effect a wide range of programs in the fields of education, economic development, social welfare and community development. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Economic Development.—A number of self-help programs are in operation, intended to give all Indians the opportunity of earning satisfactory incomes. Special attention is given to the placement of Indians in employment; the promotion of agriculture and stock-raising on reserves; the fostering of Indian enterprise and the provision of loans; home industries and handicrafts; the management of fur, fish and wildlife resources; and assistance in developing other resources on or with access to the reserves.

Placement officers of the National Employment Service, located at a number of centres, help develop job opportunities for Indians and to promote their employment in a wider range of occupations, a program which includes vocational and trade training. The Indian Affairs Branch has arranged for community organizations to counsel Indians who are becoming established in urban centres outside reserves and it also fosters the relocation

of Indian families in frontier communities associated with the mining industries, providing counsel and other assistance. Approximately \$1,200,000 was spent in 1963-64 under the Community Employment Program, which provides employment on reserves through financing projects to develop and improve public assets on the reserves. Indian bands are encouraged to become directly involved in the planning and operation of these projects and thus assume greater responsibility in developing their communities and natural resources. In mid-1964 it was announced that the community development program would be intensified and an additional \$3,500,000 provided over the next three years to assist in raising the living standards in Indian communities. This program will be conducted by the Indian Affairs Branch in association with provincial and other agencies.

Certain provinces co-operate in renewable natural resources development programs. Slightly higher fur prices have stimulated interest and activity in trapping and there are indications that 1963-64 will be the best fur season in 15 years. Recent emphasis on tourism has resulted in several successful projects on reserves; through training and promotion, more opportunities are available in guiding and a preference for Indian guides is being shown in many areas. Participation by Indians in commercial fishing continues to increase and in some areas this occupation surpasses trapping in economic importance; during 1963, Indians earned close to \$7,000,000 from trapping and more than \$5,500,000 from commercial fishing operations. Forestry operations on the reserves, as well as in areas adjacent to the reserves, provide considerable employment for Indians; they produce about 90 p.c. of the annual reserve cut. The sale of forest products brings more than \$7,000,000 annually to band funds, and timber dues add about \$700,000. Indians are given assistance in the operation of lumber mills, fence-post peeler and treatment plants, and charcoal kilns; reforestation projects and forest fire-fighting provide further income. The annual revenue to band funds from the exploitation of mineral resources on reserve lands averages about \$2,000,000 a year, most of it from oil and gas resources in Alberta.

During 1963, Indians made and sold about \$900,000 worth of handicraft items. To encourage this important part-time occupation, the Indian Affairs Branch maintains a marketing service and provides basic materials and other types of assistance on a repayable basis. Indian farmers are eligible for assistance under the Prairie Farm Rehabilitation Act, the Prairie Farm Assistance Act, and other federal statutes of general application. In addition, the Branch provides financial assistance to encourage young Indians to engage in farming and to help those already so engaged. The Branch is prepared to help Indians to finance co-operatives and small businesses when competent management is provided and the Indians concerned are familiar with the business principles and practices involved and have a financial stake in the enterprise.

Indians maintain a number of projects through their band funds. During the year 1963-64, \$41,500 was used to provide cattle for Indian farmers on a repayable basis. Agricultural assistance, nearly all of which was repayable, totalled \$102,200 and machinery was provided at a cost of \$90,100. Other expenditures included \$589,000 for roads and bridges and \$6,300 for reforestation. In addition, 52 band loans from capital funds, almost all of which were for the purchase of cattle and machinery, totalled \$38,721.

Education.—More than 50,500 Indians are enrolled in schools throughout the country. Approximately one third of these attend provincial and private schools, the cost of tuition being assumed by the Federal Government. As a further encouragement to the attendance of Indian children in non-Indian schools, grants are made toward the cost of any new or supplementary construction required by their admission.

There are three types of Indian schools, all operated at the expense of the Government. On most reserves, day schools provide education for children who live at home. Residential schools care for orphaned children, children from broken homes, and for those who, because of isolation or other reasons, are unable to attend day schools. The third type of school gives instruction to children confined to hospital.

All standard classroom supplies and authorized textbooks are used in Indian schools. Financial assistance for pupils attending non-Indian schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

Welfare.—Indians are eligible for all welfare assistance provided under federal legislation and financed by the Federal Government, including family allowances and old age security. They are also eligible to receive old age assistance, disabled persons' allowances and blind persons' allowances, which are financed jointly by the federal and provincial governments. In addition, the Indian Affairs Branch has an active interest in assisting Indian individuals and communities to achieve and maintain a standard of living comparable with that of non-Indians in similar socio-economic conditions. Although there is no federal legislation establishing Branch welfare programs, public assistance (food, clothing, fuel, house equipment) is provided on a means-test basis to indigent and dependent Indians living on reserves.

The Branch negotiates cost-sharing agreements with various governmental and private welfare agencies to ensure that existing programs of welfare assistance and social benefits are made available to Indians on the same basis as to non-Indians. In British Columbia a joint federal-provincial arrangement provides for the issuance of welfare assistance to Indians at point of need and application in the non-Indian community. The Indian Affairs Branch reimburses the province the cost of assistance for those Indians who have not lived for a full year on a self-supporting basis in the non-Indian community.

In Ontario, under the General Welfare Assistance Act, Indian bands may be considered as municipalities for purposes of relief administration under the provisions of that Act; 34 bands administer assistance under provincial regulations. When necessary, the Indian Affairs Branch assists bands with limited financial resources up to a maximum of 20 p.c. of the total costs of relief, which is the municipal share for which a band is responsible under this arrangement. In Ontario and Manitoba, departmental agreements with the respective provincial governments and Children's Aid Societies allow for the extension of child welfare services to Indian children on reserves. The Federal Government contributes financially to the administrative costs of the Children's Aid Society and pays the established per diem rate of maintenance for Indian children placed in foster homes and institutions as wards of the child care agency. The Federal Government has similar agreements with the Governments of the Yukon Territory and of Nova Scotia. In all provinces, to bridge the gap between the welfare needs of Indian communities and the availability of local resources, the Branch finances and administers a foster home care program for abandoned Indian children and a boarding home and institutional care program for dependent adults.

In the field of rehabilitation, departmental agreements with the Manitoba Sanatorium Board, the Saskatchewan Council for Crippled Children and Adults, and the Alberta Tuberculosis Association permit the establishment of rehabilitation programs on behalf of physically and socially handicapped Indians. The Branch contributes toward administrative costs of the programs and assumes responsibility for maintenance and training costs.

Assistance is also given in the area of housing. During the year ended Mar. 31, 1963, 1,085 new houses became available on the reserves and 291 were under construction at the end of the year. The total cost of the housing program was \$3,705,873, of which 52.8 p.c. was from federal welfare appropriation, 27.0 p.c. from band funds, 19.8 p.c. from personal contributions and 0.4 p.c. from Veterans' Land Act grants.

The Eskimos*

Collectively and as individuals, Canada's 13,600 Eskimos living in the Northwest Territories, northern Quebec and Labrador continued to move ahead in their development from a nomadic way of life to one not too unlike the pattern of living in some areas of Southern Canada. Eskimos are becoming settled in established communities where opportunities are greater for education, health services and employment. In addition to those self-employed as members of co-operatives, Eskimos have jobs in a variety of fields. They work as civil servants and as DEW-line employees. Eskimos are clergymen, miners, carpenters, mechanics, diesel and tractor operators and oil drillers. An Eskimo is manager of the CBC radio station at Inuvik and an Eskimo girl produces Eskimo-language

* Revised in the Editorial and Information Division, Department of Northern Affairs and National Resources Ottawa.

GROWTH OF THE ESKIMO POPULATION
AS COMPARED WITH THE TOTAL POPULATION OF CANADA,
CENSUSES 1941, 1951 AND 1961

programs for the CBC Northern Service. Eskimo women work as interpreters, waitresses, nursing assistants, secretaries and clerks—in southern as well as northern communities.

Increased education has tended to give the Eskimo a better chance in competing for employment. The number of schools in the North continues to grow—from 11 in 1952 to 57 at the end of 1963—and almost 2,500 Eskimo youngsters attend these schools which they share with all the other children who live in the North. More than 84 p.c. of the school-age population of the Northwest Territories is now in school. A program of grants and loans to finance university education for Eskimo, Indian and white children, approved by the Northwest Territories Council early in 1963, assures higher education for those who qualify. In addition, vocational training classes are available in such fields as auto mechanics, barbering, carpentry, domestic science and hairdressing. An apprentice training program to provide more skilled workers and raise occupational standards in the North began on Apr. 1, 1964; about 30 occupations are included in the program with more to be added.

Eskimo co-operatives have developed very rapidly. There are now 18 co-operatives engaged in commercial fishing, fine crafts, graphic art and sculpture, the operation of retail stores, logging and boatbuilding, and at Frobisher Bay and Inuvik groups of Eskimo families have formed housing co-operatives. Products from the co-operatives are maintaining the Eskimos' reputation as skilled artists and craftsmen. The West Baffin Eskimo Co-operative which produces graphic art has established Cape Dorset as an art centre of distinction, and interesting prints are also produced at Povungnituk. Soapstone sculptures from Povungnituk, Grise Fiord and Igloolik are well known and Eskimo craftsmen living at Baker Lake, Coppermine, Resolute and Great Whale River are producing a wide range of original and attractive articles. The fishery co-operatives at George River in northern Quebec and at Port Burwell and Cambridge Bay in the Northwest Territories have found ready and profitable markets for their catches of Arctic char. In 1963, Ookpik, a shaggy little sealskin owl produced by Mrs. Jeannie Snowball of the Fort Chimo Co-operative, was chosen by the Department of Trade and Commerce as the symbol for Canada Week at the Philadelphia Trade Fair. He was a sensation and received much publicity. He was

registered under the trade marks and patent laws to protect Mrs. Snowball and the co-operative, and is likely to make Fort Chimo the wealthiest Eskimo co-operative in Canada. Oookpik will now be used as the symbol of Canada at trade fairs and exhibitions throughout the world.

A need for more permanent homes has been created by the increasing number of settled wage earners in northern communities. Through a program of loans and grants initiated by the Northern Affairs Department, an increasing number of Eskimos own their homes. A \$1,000 subsidy covers part of the cost of each home and the owner may borrow the remainder from the Eskimo Loan Fund and repay it on terms adjusted to his income. A man's labour in building his home helps reduce the total cost. Since the housing program started in 1959, six new designs have been developed, with many of the new features suggested by Eskimos. Housing is often provided as a relief measure to help those who, through physical or other disability, cannot afford to pay for a house.

Individual Eskimos have had interesting experiences. Mary Panegoosho, a talented young Eskimo who is employed by the Department of Northern Affairs and edits the Eskimo-language magazine, *Inuktitut (The Eskimo Way)*, visited Ghana as the guest of the Ghanaian Government. George Koneak, an interpreter with Northern Affairs and a member of the Fort Chimo Eskimo Co-operative, went to England to represent all Eskimo co-operatives at the World Co-operative Congress. Leah Illauq, from Pond Inlet, wrote a book for Eskimo children—an imaginative tale called *The Little Arctic Tern and The Big Polar Bear*. This is an example of the field of literature and literary expression being opened up through the application of the new standard orthography, which uses the Roman alphabet to write the Eskimo language.

As Canadian citizens, the Eskimos receive the same social benefits as those who live farther south—family allowances, old age security, old age assistance and blind and disabled persons' allowances. The Federal Government also operates family and child welfare services and a rehabilitation and medical social service program designed to strengthen family and community life. Tuberculosis has not been eradicated but the incidence of the disease over the past ten years is decreasing rapidly. While the Eskimo infant mortality rate remains high compared with the all-Canada rate, it also is dropping with the improvement of health facilities and housing.

Section 4.—Statistics of World Population

World population figures given in Table 36 are from the United Nations *Population and Vital Statistics Report* for January 1964 and, except as otherwise noted, are mid-year estimates for 1962. The area figures are from the United Nations *Statistical Yearbook 1962*.

Estimated Population of the World by Continents.—The following statement presents adjusted estimates of the 1962 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries and territories because they include, in addition, adjustments for over- and under-enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for the countries that have not provided official 1962 data. The estimates are as follows:—

<i>Continental Division</i>	<i>Population</i>
	'000
Africa.....	269,000
North America.....	276,000
South America.....	153,000
Asia (includes Asiatic Turkey).....	1,780,000
Europe (includes European Turkey).....	434,000
Oceania (includes Hawaii).....	17,000
Union of Soviet Socialist Republics (Asia and Europe).....	221,000
WORLD TOTAL.....	3,150,000
Commonwealth countries (at Apr. 1, 1964).....	749,588

36.—Areas and Populations of the Countries or Areas of the World, 1962

NOTE.—Status of independency or dependency is as at Apr. 1, 1964. Members of the Commonwealth and the Territories for which the British or Commonwealth members are responsible (at Apr. 1, 1964) are indicated with an asterisk (*).

SECTION 3. EMIGRATION STATISTICS.....	216		

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

PART I.—IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

Section 1.—Immigration Policy and Administration

Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable.

New population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that to be able to establish themselves successfully new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds. On the other hand, qualified people from other countries can integrate successfully into Canadian society and the existing immigration Regulations recognize this principle. People anywhere in

* Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

the world have an opportunity to immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

The core of Canada's immigration policy is contained in the Regulations introduced with effect from Feb. 1, 1962. Those persons who are eligible to apply for permanent admission to Canada are specified. They include anyone, regardless of origin, citizenship, country of residence or religious belief, who is personally qualified by reason of education, training, skills or other special qualifications to become satisfactorily established in Canada. In practice, the personal qualifications and attributes of the applicant for admission are related to the needs and interests of Canadian society in any of its diversities—economic, social or cultural.

Other provisions of the Regulations enable the families of persons approved for admission under these terms to accompany them. When in Canada, a permanent resident may bring his spouse and dependent children as well as certain other close relatives to Canada. Except in some circumstances, no special criteria apply in the case of these immigrants. All immigrants must be in good health and of good character and be in possession of such documentation as the Regulations prescribe. Sponsors must be able to provide adequate care and maintenance for those for whom they apply.

In addition, Canada has on many occasions since the end of World War II sanctioned the entry of thousands of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 300,000.

The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. Twenty-nine visa offices are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Madrid, Rome, Athens, Cairo, Tel Aviv, New Delhi and Hong Kong. Four offices in the United States—at New York, Chicago, San Francisco and Denver—furnish information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for successful settlement. Examination of immigrants and visitors is carried out at 551 ports of entry on the Canadian coasts, at points along the International Boundary, at certain airports and at certain inland offices.

A primary objective of the immigration program is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the specialized settlement officers of the Immigration Branch, the Canadian Citizenship Branch, the Canadian Citizenship Registration Branch and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest census date, June 1, 1961, by period of arrival.

1.—Immigrant Arrivals, 1913-63

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

¹ Up to the date of the Census, June 1, 1961.

The above table shows that 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the records of the Department of Citizenship and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element

in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 216).

Recent Immigration.—The extent of immigration to Canada is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

During the ten-year period 1954-63, immigrants entering Canada numbered 1,286,510, the annual figures fluctuating from a high of 282,164 in 1957 to a low of 71,689 in 1961. In comparison with the relatively high levels of immigration in the three years immediately following the outbreak of the Korean War in 1951, immigration dropped off slightly to 154,227 in 1954. A minor setback in the Canadian economy in that year resulted in a very sharp decline of some 44,000 in 1955 but with the return of better times in North America and the deterioration of the political situation in Europe, immigration again rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the British Isles. This was the largest number of immigrants to enter Canada since 1913.

The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. Britain's recovery from the war and its aftermath was reflected in the fact that for the first time in the postwar years the British Isles group of arrivals was not the largest—persons from Italy were in first place, numbering 27,043 compared with 24,777 from the British Isles. Total arrivals dropped from 106,928 in 1959 to 104,111 in 1960 and to 71,689 in 1961 and during these years the numbers from Italy remained in first place. The main factors contributing to the declining trend in number of immigrant arrivals during the period 1958-61 were: (1) the upsurge in the economies of those European countries from which Canada has received the majority of its immigrants and (2) the increasing emphasis placed on selecting the immigrant who has sufficient funds and the necessary knowledge to establish himself in a business or industry of his own, as well as on the immigrant with special skills or qualifications which would permit his ready integration into the Canadian labour force.

In 1962, the number of immigrants increased slightly to 74,586 and in 1963 showed a definite upswing to 93,151. This increasing trend, which gives every indication of continuing, can be attributed mainly to an intensification of promotional and recruitment activities in the main source countries and to the expansion of immigration examination facilities in areas of the world that have thus far contributed very few immigrants to Canada.

During the ten years 1954-63, a total of 346,802 immigrants came from the British Isles, this number representing 26.9 p.c. of all immigration during that period. Other large groups came from Italy (214,206 representing 16.6 p.c. of the total), Germany (154,208

ORIGINS OF IMMIGRANT ARRIVALS, 1954-63
(LARGEST NUMERICAL GROUPS IN 1963)

representing 11.9 p.c.), the United States (109,637 representing 8.5 p.c.) and the Netherlands (65,829 representing 5.1 p.c.). The British Isles group was largest in the years 1954 to 1957 and in 1962 and 1963; from 1958 to 1961 immigrants from Italy headed all groups. Immigrants from Germany formed the second largest group in 1954; from Italy in 1955, 1956, 1962 and 1963; from Hungary in 1957; and from the British Isles in 1958, 1959, 1960 and 1961. During the ten-year period, immigration from the United States remained relatively constant at an annual average of about 11,000.

Analyses of Immigration in 1961-63.—Analyses of the content of the immigration movement during the years 1961, 1962 and 1963 are given in Tables 3 to 10, and the numbers of persons deported from Canada for various reasons for the years 1954-63 in Table 11.

Table 3 classifies immigrant admissions by country of last permanent residence for 1961-63. During the three-year period, 22.4 p.c. of the immigration flow came from Britain and the Republic of Ireland, 49.9 p.c. from Continental Europe, 14.6 p.c. from the United States and 13.1 p.c. from all other countries.

3.—Immigrant Arrivals by Country of Last Permanent Residence, 1961-63

NOTE.—Comparable figures from 1946 are given in the corresponding table of previous Year Books beginning with the 1951 edition; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

Sex distribution of recent immigrant arrivals is shown in Table 7. In the three years 1961-63, adult males comprised 33.6 p.c. of the immigrants, adult females 40.6 p.c. and children under 18 years of age the remaining 25.8 p.c. Without relation to age, 53.3 p.c. of the newcomers were females.

7.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1961-63

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Item	1961	1962	1963
	No.	No.	No.
Males.....	32,106	34,546	45,163
Under 18 years.....	9,328	9,740	12,418
Adult.....	22,778	24,806	32,745

Adult.....	30,648	30,613	35,894
Totals, Immigrants.....	71,689	74,586	93,151

The number of female immigrants coming into Canada has been higher than the number of male immigrants in every year since 1957. In 1963 the excess of females was 2,825 but in the age groups 0-14, 25-29 and 30-39 years the number of males exceeded that of females. In the single category, males exceeded females in all age groups up to 40 years but in the married category females exceeded males by 2,744, in the widowed category by 2,263 and in the divorced or separated category by 456. Of all persons arriving in 1963 who were 15 years of age or over, 53.1 p.c. were married, 40.8 p.c. were single and 6.3 p.c. were widowed, divorced or separated.

Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destination. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1961-63—50.4 p.c. of all the males and 52.2 p.c. of all the females. Quebec was the second province of destination, receiving 25.5 p.c. of the males and 24.1 p.c. of the females, followed by British Columbia with 9.7 p.c. of the males and 10.3 p.c. of the females. The proportions intending to

settle in the Prairie Provinces were 11.1 p.c. and 10.6 p.c., respectively, and in the Atlantic Provinces 3.1 p.c. and 2.7 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 49.2 p.c. of the persons admitted in 1963 declared that they would enter the labour force. The other 50.8 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 22.2 p.c. were classed as professional and managerial, 7.5 p.c. were in agricultural occupations, 6.1 p.c. in service occupations, 40.8 p.c. in manufacturing, mechanical and construction trades, and 11.0 p.c. were general labourers. About 29 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 10.

Deportations.—Deportations by cause and nationality are shown in Table 11 for the years 1954-63. Persons who have not yet acquired domicile (five years of residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

² Includes deserting seamen deported.

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 12 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1954-63 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 36,003 Canadian-born persons entering the United States in the year ended June 30, 1963, 17,480 were males and 18,523 females. Slightly more than one quarter, or 9,520, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 36,003 native-born persons was the professional or technical group which numbered 4,047; clerical or kindred workers numbered 3,559, and 2,036 were classed as craftsmen or foremen. On the other hand, 19,679 persons, or 54.7 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 42.6 p.c. of the total were children under 20 years of age.

Of the 50,509 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service, United States Department of Justice, lists 6,398 as professional, technical and kindred workers, 4,928 as clerical and kindred workers and 4,184 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 25,007, or 49.5 p.c. of the total.

12.—Canadian-Born Persons Entering the United States from Canada and Elsewhere, and All Persons Entering the United States from Canada, Years Ended June 30, 1954-63

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born outside of Canada who were not aliens on Jan. 1, 1947 and who were entitled to claim derivative citizenship in accordance with the provisions of the Act.

The Act provides that a person in the second category who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

* Prepared in the Citizenship Registration Branch under the direction of the Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Acquisition of Canadian Citizenship by Aliens and British Subjects.—The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now being established. He must appear before the judge for a hearing and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her—if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, *de facto* guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances. Provision is made for the granting of a certificate to a person who has been adopted or legitimated in Canada and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (4) An other-than-natural-born Canadian citizen, unless he served outside Canada in the Armed Forces of Canada in time of war or other related circumstances, or unless otherwise exempt, loses his citizenship automatically if he has resided outside of Canada for ten consecutive years. The period of absence may however be extended upon request, if the application is filed and granted before loss occurs and if good and sufficient reason exists.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—In 1958 the Canadian Citizenship Act was amended and limited the provisions regarding loss of Canadian citizenship to the following: the citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official

Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

Loss of Citizenship by Revocation.—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province and Table 2 gives the numerical and percentage distribution of the population by country of citizenship for 1961 compared with the distribution in 1951.

¹ Includes persons who reported themselves as stateless.

Citizenship Certificates Issued.—The following statistics show the number of citizenship certificates “issued” and more detailed information on certificates “granted” in recent years. The former, in Table 3, include both certificates granted to new citizens and those issued for various reasons to persons who were already Canadian citizens. Tables 4 to 8 refer only to “grants” which means that the holder became a Canadian citizen by the grant of such certificate.

In 1962, 125,817 Canadian citizenship certificates were issued as compared with 96,191 in 1961. During 1962, the Canadian Citizenship Registration Branch recorded 5,053 certificates of registration of births abroad and 108 declarations of retention of Canadian citizenship. Corresponding figures for 1961 were 5,477 registrations of births abroad and 92 declarations of retention.

¹ Exclusive of resumptions of Canadian citizenship, numbering 36.

Characteristics of Persons Granted Citizenship Certificates in 1963.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 69,468 persons granted citizenship in 1963, fewer than 1 p.c. had immigrated to Canada before 1921, 2 p.c. in the period 1921-40, 7 p.c. in the period 1941-50 and 90 p.c. after 1950. Regionally, these new citizens were distributed as follows: 1 p.c. in the Atlantic Provinces, 18 p.c. in Quebec, 53 p.c. in Ontario, 15 p.c. in the Prairie Provinces and 12 p.c. in British Columbia. Over 87 p.c. of them resided in urban centres.

About 16 p.c. of the persons naturalized in 1963 previously owed allegiance to a British Commonwealth country, former citizens of Italy and Germany comprised 15 p.c. each, 10 p.c. had been citizens of the Netherlands, 9 p.c. citizens of Hungary, 5 p.c. citizens of Yugoslavia and 5 p.c. citizens of Greece. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia and Romania.

Among the males in the labour force naturalized in 1963, craftsmen, production process workers and related occupations were reported by 44 p.c., 11 p.c. were in service and recreation occupations, 10 p.c. were in professional and technical occupations, labourers accounted for 10 p.c., managerial occupations for 6 p.c. and clerical workers, farmers and farm workers for 5 p.c. each. Of the females, 45 p.c. were homemakers and, among those employed outside the home, 30 p.c. were in the craftsmen, production process and related occupations group, 27 p.c. were in service and recreation occupations and 25 p.c. were in clerical occupations.

SECTION 4. NATURAL INCREASE.....	258		

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which it is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths and marriages (and divorces) registered in the several provinces and the territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of a variety of national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-60 and for single years 1960-62. Table 2 shows similar data for urban centres having at least 10,000 population at the date of the 1961 Census for the year 1962 with comparative annual averages for 1956-60.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

1.—Summary of Principal Vital Statistics, by Province, 1941-62

NOTE.—Figures for the years 1921, when the collection of national statistics was initiated, to 1940 are given in previous editions of the Year Book. Figures for neo-natal mortality (within the first four weeks of birth) are given on p. 254 and those for divorces on p. 263.

¹ Excess of births over deaths. ² Deaths under one year of age; deaths within the first four weeks of birth are given on p. 254. ³ Per 1,000 population. ⁴ Per 1,000 live births. ⁵ Figures for Newfoundland are included from 1949.

2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 10,000 Population or Over,¹ Average 1956-60 and 1962

Note.—Birth, death and natural increase rates cannot be computed for 1962 or the period 1956-60 since urban centre populations are not known for interensal periods. Urban centres are designated in this table by the following abbreviations: c. = city, t. = town, vl. = village, s.m. = suburban municipality, and d.m. = district municipality.

VITAL STATISTICS RATES, 1923-62

Section 2.—Births*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

* Unless otherwise indicated, "births" in this Section refer to infants born alive; stillbirths are dealt with under a separate heading on p. 242 and under multiple births on p. 236. For international comparisons, see Section 7, pp. 267-268.

† A crude rate is one based on the total population.

The general trend in the national birth rate since 1923 is shown in the chart on p. 233 and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930's and during World War II to 24.3 in 1945 and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1962 reached a postwar low of 25.3. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions than formerly of 'non-productive' population, as well as to the fact that the large, immediate postwar cohorts of married women are now approaching the end of their reproductive periods and have completed their families. Further, even if the annual number of births were to remain stable at 450,000 to 500,000—as it has for the past five to ten years—the net effect of an increase in population is a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 while those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-59 period. However, most of the provinces recorded their lowest postwar rate in 1962.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest birth rate in Canada. Since the late 1930's or early 1940's Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 226-227, shows that five provinces—Newfoundland, Alberta, New Brunswick, Prince Edward Island and Nova Scotia in that order—had higher crude rates than Quebec in 1961 and 1962 followed by Saskatchewan, Ontario and Manitoba, and British Columbia. However, since these crude rates are based on the *total* population they do not reflect the fertility of the women of reproductive age in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 44 (see pp. 237-238).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1962, 156,053 babies were born to Ontario mothers as compared with 135,000 to Quebec mothers. Altogether, 469,693 children were born in Canada in 1962, 9,582 fewer than the record 479,275 born in 1959 and 6,007 fewer than the number born during 1961.

Sex of Live Births.—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930's. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946. In 1962, 1,053 male infants were born for every 1,000 females.

3.—Sex Ratios of Live Births, 1941-62

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Hospitalized Births.—In 1962 almost 98 p.c. of all Canadian births occurred in hospital as compared with 88 p.c. six years previously. Table 4 shows the rise in hospitalized births in each province since 1931. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating in 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959, and in Quebec where the plan went into effect in 1961.

¹ Excludes Newfoundland for which data are not available.

Births in Urban Centres.—Table 2, pp. 228-232, shows the number of births in 1962, as compared with the average for 1956-60, to mothers residing in each urban centre of 10,000 population or over. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for the 1956-60 period or for 1962.

Illegitimacy.*—In 1962, almost 5 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising, particularly during the past five years.

¹ Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

Multiple Births.—Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago—in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. The chance of a mother delivering twins is about one in 90, triplets, one in about 10,000 and quadruplets, one in about 750,000 or more. Two sets of quadruplets were born in Canada during 1960—the first since 1957—and one set in 1962 (all born alive). In 1962 a total of 470,345 mothers bore a total of 475,605 infants, of which 469,693, or almost 99 out of every 100, were born alive.

Other facts illustrated by Table 6 are that the proportion of stillbirths is higher among multiple than among single births, about twice as high for twins and between three and five times as high for triplets.

* The term "illegitimate", as used here, does not refer to *all* births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

Fertility Rates.—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 44, variations in the proportion of women of these ages to the total population will, of course, cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would therefore be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types—generally referred to as *crude fertility rates*—are compared in Table 7, and indicate the variations in each type as between provinces and the provincial trends over the years 1959-62.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 132 in 1959 to 124 in 1962. However, the rates varied among the provinces from 117 to 183 during the past four years; Newfoundland, Prince Edward Island, New Brunswick and Alberta had, on the whole, the highest rates and Quebec, British Columbia, Ontario and Manitoba, in that order, the lowest. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 187 to 176 during the same period. According to this measure, the five eastern provinces had, on the whole, the highest rates and the five most western provinces the lowest; provincial rates ranged from 153 to 276. Most provincial rates declined in varying degree during the period, notably in 1962.

¹ Since the number of births to women over 44 is quite small, rates are here restricted to women under 45.

² Excludes the Yukon and Northwest Territories.

The rates shown in Table 7 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 8 provides these two sets of rates—the former for 1941 and 1951-62 and the latter for census years only from 1941, since population data are not available by detailed age groups for intercensal years.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 8

indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 if the fertility rates of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930's the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.700 and 1.915 (1959); in 1962 the rate stood at 1.836, still 80 p.c. more than the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 8 indicates that in 1961, considering all women whether married or not, women in their 20's were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 232 infants were born during that year or, expressed another way, about one woman out of four in that age group gave birth to a live-born infant. This compares with a rate of almost 216 for women in the age group 25-29, which is closer to one in five. However, among *married* women, teenage mothers have

consistently had the highest fertility, with one out of two bearing a child each year on the average, while about 37 out of every 100 married women in their early 20's had a child every year as compared with about one in four for women in their late 20's.

Age of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 9, as well as the average age of parents.

Over 7 p.c. of the legitimate children born in 1962 were born to mothers under 20 years of age, in over one third of the births the mother was under 25 years, and in almost two thirds, under 30 years; in one out of six births the father was under 25 years of age, and in over 48 p.c. of all births the father was under 30 years. On the other hand, over one third (36.8 p.c.) of the illegitimate infants born were born to mothers under 20 years of age and an additional one third to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1962 was 28, and of the fathers 31.3 years; ten years ago the average ages of the parents were 28.4 and 32.1, and thirty years ago 29.2 and 33.6, respectively.

The median age of unmarried mothers who bore a live-born child in 1962 was 21.4, that is, half of the mothers of the 21,818 'illegitimate' children delivered in 1962 were under 21.5 years of age at the time of delivery.

Order of Birth.—Table 10 shows the order of birth of all live-born infants in 1962 according to the age of the mother. As would be expected, 28,873 or three out of every four of the 39,628 infants born to mothers under 20 years of age were the first-born, whereas almost six out of every ten of the children born to mothers of 20-24 years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years. In 1962, 211 infants were born to mothers who had not yet reached their 15th birthday.

Birthweight.—In recent years information on birthweight of newborn infants has become available from provincial (except Newfoundland) records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed fetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5 lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight at birth depends on a host of maternal factors, most of which are not included in the birth records, but some information is available on the age of the mother

and length of pregnancy before delivery.* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20's and early 30's would appear to be the ideal ages for motherhood, and (3) practically all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and a female about four ounces less.

Stillbirths.†—The 5,882 stillbirths in 1962 represented a ratio of 12.5 for every 1,000 fetuses born alive. As is evident from Table 12, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

* Obtainable from the Vital Statistics Section, DBS.

† Stillbirth figures given here refer only to fetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only fetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy for those provinces having this legislation in effect before 1963 are obtainable from the Vital Statistics Section, DBS.

¹ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. ² Figures for Newfoundland are included from 1949.

Table 13 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1962 was 30.2 years; the median age, i.e., the age above and below which half of the stillbirths occurred, was 29.8. The average age of mothers who bore legitimate live-born children was 28.0 and of those who bore illegitimate live-born offspring was 23.6.

Section 3.—Deaths*

No official crude† death rates are available prior to 1921, but some indication of these may be gleaned from studies of the early censuses as follows:—

Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

* For international comparisons, see Section 7, pp. 267-268.

† A crude rate is one based on the total population.

As is typical of pioneer populations, Canada had a high death rate in the mid-1850's when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly so since even in the 1920's mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was gradually halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950's and dropped to a low of 7.7 in 1961 and 1962. This is one of the lowest crude rates in the world.

Table 1, pp. 226-227, shows the trends since 1941 in the provinces and territories. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is mainly attributable to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931, over 19 p.c. of all male deaths occurred among persons of five to 45 years of age; in 1962 only a little over 10 p.c. took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. to 7.5 p.c. While death rates for males up to age 45 were roughly halved during the past 25 years, those for females under 45 were reduced as much as three to four times. In other words, the death rates for females at every age declined more than those for males; the male rates have almost always been consistently higher than those for females and the differences are widening. The crude male death rate stood at 8.9 per 1,000 total male population in 1962 as compared with only 6.5 for females.

15.—Trends in Age-Specific Death Rates per 1,000 Population for Males and Females, Average 1926-30 to 1962

Age Group	Males			Females		
	Av. 1926-30	1962	P.C. Decline	Av. 1926-30	1962	P.C. Decline

50 — 59 ".....	12.9	12.1	6.3	11.4	6.5	43.4
60 — 69 ".....	30.3	29.0	4.3	26.5	16.5	37.8
70 + ".....	96.0	86.7	9.7	92.3	68.1	26.2

Despite the very considerable reduction that has taken place in infant mortality, more deaths still occur in the first year of life than in any other single year. Of the total deaths occurring in 1931, almost one quarter were of children under five years of age and more than three quarters of those were of children under one year of age; of the deaths occurring in 1962, about 10 p.c. were of children under five years and of those about 86 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8

AGE-SPECIFIC DEATH RATES, 1962

years; by 1962 this had advanced to 59.9 years and 63.2 years, respectively. On the other hand, the median age—i.e., the age above and below which half of the total number of annual deaths occur—increased during the same period from 50.8 to 68.0 for males, and from 52.1 to 72.4 for females. This means that *half* of all the females who died during 1962 were over 72 years of age, while for males half had reached 68 years. Since 1931 the gains in median age were 17.2 years for males and 20.3 for females.

Table 17 indicates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, while the reverse is the case in British Columbia and several other provinces with older populations.

¹ The age above and below which half of the total number of annual deaths occurred.

Deaths in Urban Centres.—Table 2, pp. 228-232, shows the numbers of deaths in urban centres of 10,000 population or over in 1962 and the average numbers for the period 1956-60; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal periods.

Causes of Death.—Table 18 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Thus cancer and diseases of the cardiovascular-renal systems now account for a substantially larger proportion of all deaths than formerly. By the same token, deaths from causes that mainly affect children and young adults have declined.

^a Per 100,000 males.^a Per 100,000 live births.

Accidents have displaced infectious diseases in recent years as one of the major killers. Table 19 shows clearly that accidents are, by far, the leading cause of death among males from age 1 to 45 and one of the five major causes above that age. Although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life.

Subsection 2.—Infant Mortality

Table 1, pp. 226-227, and Table 20 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 66,731 of the 2,373,337 children born in the five years 1958-62 died before reaching their first birthday, 156,362 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1962 male infant mortality rates ranged from a low of 26 to a high of 42, compared with the national average of 31—the latter including the very high rate among the Northwest Territories aboriginal population. Female rates ranged from 19 to 37, compared with the national rate of 24. While the national and provincial rates for both sexes have been declining steadily for some years, for some unknown reason there were a number of reversals in provincial rates in 1962, as shown in Table 20.

Table 20 shows that mortality among male infants is 25 to 30 p.c. higher than that among female infants for Canada as a whole, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1962, 31 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 24 died within one year. As already pointed out, there are on the average 1,057 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1960-62 there were 731,302 male children born compared with 692,642 female children, an excess of 38,660 or 5.5 p.c.; in the same period, 22,398 male children died during their first year compared with 16,560 female children so that the excess of males at one year of age was reduced to 32,822 or 4.7 p.c.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely

from year to year. As is evident from Table 2, pp. 228-232, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—In 1962 more than two thirds of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,304 and was an added complication in 3,170 others. Congenital malformations accounted for 2,230 fatalities, pneumonia for 1,640, postnatal asphyxia for 1,475 and injury at birth for 1,338. Rates for congenital malformations and birth injuries have been rising during the past three or four years.

Neo-natal Mortality.—Deaths occurring within the first four weeks of birth are conventionally referred to as 'neo-natal' (derived from the term 'newborn') deaths. Table 22 shows that over two thirds of all infant deaths occur in this hazardous neo-natal period and, as would be expected, are caused mainly by conditions associated with pregnancy or delivery. Table 23 gives numbers and rates of neo-natal deaths for 1941-62 and the following chart compares the major causes of such deaths with all infant deaths (up to one year of age) from the same causes.

23.—Neo-natal Mortality,¹ by Province, 1941-62

¹ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

Perinatal Mortality.—‘Perinatal’ mortality—the combined total of stillbirths and deaths of live-born infants occurring ‘around’ the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1962 there were 13,598 such ‘deaths’, of which 5,882 were stillborn and 7,716 live-born but failed to survive one week, with a national rate of 28.6 such deaths for every 1,000 total deliveries. This perinatal rate has declined very slowly, but steadily, from 65.2 in 1921 to 28.1 in 1961 but rose for the first time to 28.6 in 1962. Despite what might appear to be an encouraging reduction over the past forty years, there has been very little change during the past four years.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 226-227, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths declined almost steadily from 1940 (when there were 978 deaths and a rate of 40 deaths for every

10,000 births delivered alive) to an all-time low of 191 in 1962. Since 1951 the rate of maternal mortality has been under 10 and since 1959 it has been under five. Despite this improvement, Canada's maternal death rate (4.1 in 1962) is higher than the rates for several other countries such as Sweden (3.7), England and Wales (3.4) and the United States (3.2). Mortality among unmarried mothers is higher than among married mothers.

Causes of Maternal Deaths.—Table 24 shows the main causes of maternal deaths during the years 1960-62. Of the 191 maternal deaths in the latest year, 52 resulted from complications arising during pregnancy, a little less than half of these from some type of toxæmia; 78 resulted from a complication of delivery, 37 from a post-delivery complication and 24 from abortive delivery. There has been an encouraging drop in maternal deaths caused by toxæmia during the past three or four years.

Age at Death.—Table 25 shows the distribution of maternal deaths by age group and average age at death; the latter is about four years higher than the average age of all mothers at the time of childbirth. Until recent years, the risk of mortality at childbirth was directly related to the age of the mother—in other words, for all mothers of over 20 years the rate rose with increasing age. While death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

Section 4.—Natural Increase*

The excess of births over deaths, commonly referred to as natural increase, is a very important factor in the growth of a population. Although, as previously stated, the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800's and early 1900's varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920's and early 1930's the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate still is quite high at 17.6 (1962).

Table 1, pp. 226-227, gives average rates of natural increase in the provinces for five-year periods 1941-60 and Table 26 gives the provincial figures for males and females separately for 1941, 1951 and 1960-62. High birth rates and declining death rates have given Newfoundland, Alberta, New Brunswick, Quebec and Saskatchewan the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

* For international comparisons, see Section 7, pp. 267-268.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 228-232.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In both 1961 and 1962 Canada's crude marriage rate was 7.0 per 1,000 population, the lowest in over 20 years. Provincial rates varied from 6.4 per 1,000 population for Prince Edward Island to 7.6 for Alberta.

Table 27 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951 and the three consecutive years 1960-62, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, over 83 p.c. of the bridegrooms of 1962 were born in Canada and over 69 p.c. in the province in which they were married; almost 87 p.c. of the brides were born in Canada and 75 p.c. in the province in which they were married. During the postwar years until 1959 an increasing number of marriages were of persons born outside the country, because of the heavy immigration of young persons. However, since 1959 the proportion of foreign-born bridegrooms declined from 19.6 to 16.7 p.c. in 1962 and the proportion of foreign-born brides from 15.9 to 13.2 p.c. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

* For international comparisons, see Section 7, pp. 267-268.

Age and Marital Status of Brides and Bridegrooms.—Table 28 shows that over 91 p.c. of the marriages in 1962 were between persons who had not been married previously; 4.9 p.c. of the brides and 4.4 p.c. of the bridegrooms had been widowed, and

almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just under 26 years and that of spinsters just under 23 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 29 shows the very strong influence that religion has on

marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; in 1962 among those of Jewish faith it was about 94 p.c.; among Roman Catholics about 87 p.c.; United Church about 59 p.c.; and Eastern Orthodox about 67 p.c.

² Percentage of marriages between contracting parties of the same religious denomination.

Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada was very small, and represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a postwar low of 5,270 in 1951 and from 1953 to 1962 fluctuated between 5,923 and 6,980. The 1963 preliminary figure of 7,681 was the third highest on record. No divorces were approved by the Canadian Parliament during 1962 for residents of Quebec and Newfoundland.

Section 6.—Canadian Life Tables

Five official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956 and 1961. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 but, since these are based on *estimated* populations by sex and age and the deaths recorded in those years, they are not considered as reliable as those for the census years. The life table values for 1961 are given in abbreviated form in Table 31.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1961, of 100,000 males born, 3,058 would have died in their first year, according to the mortality rates in effect during the period 1960-62, so that 96,942 would survive to one year of age; 179 would have died in their second year so that 96,763 survived to two years of age, and so on. At 100 years of age only 105 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1961 life table (see Table 31) about 12,100 males would have died before reaching age 50 as compared with about 7,600 females; only 57,517 of the original group of 100,000 males would have survived to age 70 as compared with 72,746 females.

By 1961, life expectancy *at birth* in Canada had reached a new high point of 68.4 years for males and about 74.2 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child *at present mortality risks* may, on the average, expect to live an additional 69.5 years and a female almost 75 years, representing for an infant boy a gain of 1.2 years over his expectation at birth and for an infant girl a gain of 0.8 years. The expectation of life of a 15-year-old boy is 56.2 additional years; of a 15-year-old girl 61.5 years. At 25 years of age the expectation is about 46.9 years for men and 51.8 years for women and at age 70, 10.7 years for men and 12.6 years for women.

Table 32 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956 and 1961. According to these figures, life expectancy at birth for men increased about three quarters of a year between 1956 and 1961 and 1.3 years between 1951 and 1956, compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained one and one quarter years between 1956 and 1961 and 2.1 years between 1951 and 1956, compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1961 a total of 8.4 years was added to male life expectancy and 12.1 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.5 years have been added to the life expectancy of a five-year-old male, 2.5 years to a 20-year-old, about one year to a 40-year-old and about half a year to a 60-year-old as compared with 8.4 years for a newborn male. During this period, life expectancy for a five-year-old female gained 8.1 years, for a 20-year-old 6.9 years, for a 40-year-old 4.4 years and for a 60-year-old two and three quarter years as compared with 12.1 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates have been established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, has been subjected to the mortality rates in effect in 1960-62, and the life expectancy computed as *if those death rates at each age were to prevail during their lifetime*. Actually the theoretical 200,000 infants born in 1960-62 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1960-62.

The improvement in life expectancy, particularly among children and adolescents, is caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past 30 years. As approximately 9 p.c. of deaths in 1960-62 occurred among infants and an additional 77 p.c. among persons over age 50,

any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Section 7.—International Comparisons of Vital Statistics

Table 33 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Venezuela, Japan and the Union of Soviet Socialist Republics—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking eighth among those listed. However, 16 countries reported lower or equal rates of infant mortality, some as low as 14 or 15 per 1,000 live births (Netherlands and Sweden), half of Canada's rate of 28.

33.—Principal Vital Statistics Rates of Selected Countries, 1962

Note.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Canada's growth in the past decade has created many new problems in the planning of health and welfare services. Population has increased by one half in this period. General prosperity, growing urbanization and industrialization, larger numbers of children and aged persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional services and to a greater interdependence among the health and welfare professions.

During 1963, the Royal Commission on Health Services continued its investigation into the existing health facilities and the future needs for health services for the people of Canada; its report was made in June 1964.† The nation's attention was attracted to health

* Except where otherwise indicated, this Chapter was prepared by the Research and Statistics Division of the Department of National Health and Welfare, Ottawa.

problems by several major events during 1963. Early in the year, the Restrictive Trade Practices Commission, reporting on the manufacture, distribution and sale of drugs in Canada, recommended, among other things, that patents with respect to drugs be abolished, this being stated to be the only effective way to reduce the prices of drugs. Alberta passed legislation designed to extend the coverage and scope of plans offered by commercial and by non-profit medical care insurance agencies on a voluntary basis. The government involvement is confined to setting out optimum levels of premiums and of comprehensive benefits for approved and licensed voluntary agencies, and to providing from general revenues subsidization of premiums for those residents who cannot afford the premiums. The Alberta plan started to operate late in 1963. In Ontario, a Bill similar to the Alberta legislation and called "An Act Respecting Medical Services Insurance" was given second reading on Apr. 25, 1963, and referred to a public committee for study. The committee began public hearings later in the year.

In May 1963, the Ontario Legislature passed the Pension Benefits Act which provided for the compulsory extension, improvement and solvency of private pension plans and for the portability of pension benefits. In July 1963, the Federal Government introduced in the House of Commons the resolution preceding the introduction of a Bill to provide for a nation-wide contributory old age insurance program. The government of the Province of Quebec indicated about the same time that it would introduce an old age and survivors insurance program for persons employed in that province. In the last half of 1963 three federal-provincial conferences were held at which the question of old age pension insurance was discussed, and that part of the Ontario legislation relating to the extension of private pension plans was suspended pending examination and study of the federal plan.

In March 1964, the Federal Government introduced a resolution and gave first reading to a Bill "to establish a comprehensive program of old age pensions in Canada payable to contributors and survivors". Subsequently, the government of Quebec made public the provisions of the old age, survivors and disability insurance program which it intends to introduce. Through consultation between the federal and Quebec governments, an agreement was reached that the federal and the Quebec Bills would have identical provisions so that legislation with respect to old age, survivors and disability insurance benefits would be uniform across the country. Discussions between the federal and provincial governments on the arrangements for implementation of the program continued.

At the federal-provincial conference in September 1963, it was suggested that the whole field of social assistance should be generally re-examined in the hope of developing one general assistance program based on need. Subsequently, the proposal was discussed by officials of the two levels of government and in May 1964 the federal and provincial Ministers of Welfare met to discuss the problem.

Late in 1963, the old age security pension was raised from \$65 to \$75 a month. The maximum rate of old age assistance, blind persons allowances and disability allowances in which the Federal Government would share was raised from \$65 to \$75 a month per recipient. All ten provinces agreed to share the costs of these three programs at the new maximum rates.

In his Budget Speech of March 1964, the Minister of Finance announced that the Federal Government proposed to extend family allowances, at the rate of \$10 a month, to children aged 16 and 17 attending full-time educational or training courses. Legislation to this effect was passed by the House of Commons on July 7, 1964.

PART I.—PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of

health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the federal Civil Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Programs has become a major activity during the past decade.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

Subsection 1.—National Health Grant Program

The National Health Grant Program, inaugurated in 1948, initially made ten federal grants available to the provinces for the development and strengthening of public health and hospital services. Nine were continuing grants—the Hospital Construction, Professional Training, General Public Health, Public Health Research, Mental Health, Tuberculosis Control, Cancer Control, Venereal Disease Control, and Crippled Children Grants. A Health Survey Grant lapsed in 1953 following completion of provincial health surveys. In 1953, after a review of the first five years of the Program, three new grants were established—Child and Maternal Health, Medical Rehabilitation, and Laboratory and Radiological Services.

In 1958, federal assistance under the Hospital Construction Grant was increased to \$2,000 per hospital bed (whether active treatment, chronic, mental or tuberculosis), double the previous grant for active treatment beds. In addition, funds were made available to meet up to one third of the cost of approved alterations and renovations to existing facilities, with the federal contributions being at least matched by the provinces.

Beginning with the fiscal year 1960-61, a redistribution and merging of certain grants was effected to provide a more flexible measure of assistance and at the same time make larger amounts available for programs where additional aid was necessary. Adjustments were also required for services aided under certain grants, such as laboratory and radiological services and cancer control, now aided under the Hospital Insurance Program. The total allocation remained approximately the same but the number of separate grants was reduced to nine. The General Public Health Grant was increased by almost \$5,500,000 and projects under two previously separate grants—the Laboratory and Radiological Services Grant and the Venereal Disease Control Grant—were absorbed into it. The Medical Rehabilitation and Crippled Children Grants were merged and the combined allocation increased by more than \$1,000,000. The Mental Health Grant was increased by more than \$1,500,000 and the Professional Training and the Public Health Research Grants by about \$1,250,000 each. The Tuberculosis Control Grant was decreased by nearly \$750,000 and the Child and Maternal Health and Cancer Control Grants by lesser amounts. The grants for professional training and public health research, previously fixed amounts, were placed on a per capita basis, to increase with expansion of the population.

During the year 1962-63, flexibility was introduced by setting aside an amount of \$250,000 in the Medical Rehabilitation Grant to be given to the provinces for use in special projects to assist children with congenital defects. Part of the Cancer Grant (\$350,000) was allocated for cancer research, to be distributed upon application.

Up to Mar. 31, 1963, aid for hospital construction had been approved for 105,521 beds, 13,340 bassinets, 21,206 nurses' beds, 716 interns' beds, and space in community health centres and laboratories. Approximately 35,000 health workers had been trained or were undergoing special training and more than 5,000 health workers were employed with federal grant assistance. Payments in 1962-63 totalled \$50,295,363, or 86 p.c. of the amount available; the average utilization during the fifteen years of the program was 77 p.c.

Subsection 2.—Hospital Insurance

The federal-provincial hospital insurance program, established in all provinces and both territories, covers 98.6 p.c. of the insurable population of Canada. The system of federal grants-in-aid to the provinces to help meet the cost of specified hospital services is set out under the federal Hospital Insurance and Diagnostic Services Act of 1957. The methods of financing and administering the provincial plans, as well as the types of service offered above the minimum stipulated in the Act, rest with the provinces.

Federal legislation covers only services provided by approved acute, chronic and convalescent institutions. Tuberculosis and mental hospitals are excluded from the federal-provincial plan, as are institutions providing custodial care. On the other hand, the psychiatric and tuberculosis units of general hospitals are included.

The basic range of in-patient benefits that, under the Act, each province is required to provide includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, the use of operating and case rooms, diagnostic procedures (including X-ray and laboratory procedures) together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for out-patients, although authorized for assistance under the federal legislation, are not mandatory upon provincial plans. All provinces but one provide insured out-patient services. The pattern varies from province to province, but among the services offered are emergency care following accidents, diagnostic services and therapeutic services including minor surgical and medical procedures. Some provinces provide certain psychiatric out-patient services.

There is considerable variation between provinces in the administration and financing of programs. General revenues, provincial sales taxes and personal premiums are utilized, separately and in combination, in different provinces. The Federal Government pays each province 25 p.c. of the per capita cost of in-patient services in Canada as a whole, together with 25 p.c. of the per capita cost of in-patient services in the province, multiplied by the average for the year of the number of insured persons in the province. On a national basis, the federal contribution amounts to about 50 p.c. of sharable costs. However, for individual provinces the proportion of sharable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs being met than of high-cost programs. Federal payments to the provinces under the program from July 1, 1958 to Dec. 31, 1963, totalled over \$1,300,000,000. During 1963, federal grants to the individual provinces and territories totalled \$357,600,000, divided as follows: Newfoundland, \$7,600,000; Prince Edward Island, \$1,800,000; Nova Scotia, \$13,800,000; New Brunswick, \$11,600,000; Quebec, \$100,800,000; Ontario, \$126,800,000; Manitoba, \$18,200,000; Saskatchewan, \$19,700,000; Alberta, \$25,300,000; British Columbia, \$31,100,000; Yukon Territory, \$295,000; and the Northwest Territories, \$553,000.

The data appearing in Tables 2 and 3 pertain to the calendar year 1961, which was the first full year that all the provinces and both territories participated in the hospital insurance program. The tables refer to hospitals listed in the hospital insurance agreements. Hospitals participating in hospital insurance programs are designated as "budget review" hospitals, which comprise the bulk of hospitals listed in the agreements, and "contract" hospitals, which are private or industrial hospitals with which a province has contracted for the provision of insured services. Federal hospitals, also listed in the agreements, are included in Tables 2 and 3. Budget review hospitals include general hospitals designed for acute or short-term care, special hospitals and chronic hospitals.

On Dec. 31, 1961, the 1,309 hospitals of all categories reporting showed a total of 121,046 beds and cribs set up, a rate of 6.6 beds per thousand population; provincial rates ranged from 4.3 in Newfoundland to 8.5 in Alberta and territorial rates were even higher. The volume of hospital days per thousand population also varied considerably from province to province; that for Canada was 1,951.9, a rate considerably below the averages in Saskatchewan and Alberta but well above the average in Newfoundland. In 1961, 87.8 p.c. of all days of care in hospital were insured days.

2.—Number of Beds and Cribs in Hospitals Listed in Hospital Insurance Agreements, with Rate per 1,000 Population, by Province, as at Dec. 31, 1961

¹ Per 1,000 total population; based on 1961 Census.
number of insured persons under provincial plans, 1961.

² Per 1,000 insured population; based on annual average

The total cost of operating budget review hospitals in Canada in 1961, including items of expense not covered under the hospital insurance program, was \$695,600,000. This total included \$448,500,000 for salaries and wages, \$22,100,000 for medical supplies, \$29,900,000 for drugs, \$44,200,000 for food, \$95,800,000 for other departmental supplies and expenses, and \$55,100,000 for other expenses consisting mainly of interest payments and depreciation allowances. Table 4 gives various classifications of these expenditures.

The per patient-day cost of salaries and wages ranged among the provinces from a low of \$10.24 for Prince Edward Island to a high of \$16.22 for British Columbia, the average for Canada being \$14.84. Since raw food cost includes food supplied to staff, in-patients and visitors, the differences in such costs per patient-day probably reflect variations in the proportion of hospital staff taking meals at the hospitals rather than variations in the cost of food per meal served.

The total per capita operating cost of hospitals in Canada was \$38.14, ranging among the ten provinces from \$22.94 in Newfoundland to \$43.30 in Saskatchewan. The variations in total per capita expenses are very large, partly because of the variation in the number of hospital days of care provided per thousand persons in each province.

The percentage distribution of expenses shows that about 65 p.c. of the operating costs of the hospitals was for wages and salaries, 3 p.c. for medical supplies, 4 p.c. for drugs, 6 p.c. for food, 14 p.c. for other departmental supplies and expenses and 8 p.c. for depreciation, interest and other non-departmental expenses. British Columbia hospitals spent 68 p.c. of their operating funds on salaries and wages as compared with 54 p.c. in Prince Edward Island.

Subsection 3.—Food and Drug Control

The Food and Drugs Act is a federal statute with provisions applying to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments assures the production of clean, wholesome foods. The sale for human consumption of meat from animals that were not healthy at the time of slaughter or that died from disease is expressly prohibited. Changing food technology requires the development of methods of laboratory analysis to assure the safety of new types of ingredients and packaging materials. The increase in the number of chemicals used in foods and the safety of the foods to which they are added is a matter for special research. Also of importance is the bacteriology of frozen foods in guarding against contamination through improper storage of frozen foods. Since the Food and Drugs Act is intended for the protection of consumers, a section of the Food and Drug Directorate obtains consumer opinions, deals with individual consumer complaints and provides sound information on which consumers can base opinions.

Drug standards are subject to continuous review and testing. Detailed information on all new drugs must be reviewed by the Directorate before release for sale is permitted. In 1963 important regulations were issued, one setting standards operative in all drug manufacturing facilities and the second prescribing additional safeguards in the distribution of investigational drugs. Drug manufacturing requirements relate to sanitation of facilities, employment of qualified personnel, testing to ensure standards of quality and safety

at stated stages of processing, maintenance of records of testing performance, together with a system of control to enable a complete and rapid recall of any lot or batch of drugs from the market. The new controls over clinical trials and marketing of new drugs carry out provisions of the Food and Drugs Act amendment passed in 1962. Detailed information must be submitted to the Directorate concerning the method of manufacture, the tests applied to establish standards of safety and quality, and substantial evidence of the clinical effectiveness of the new drug for the purposes stated. Samples of the final product must also be submitted. Before putting a product into clinical testing a manufacturer also must file complete data on the experience with the drug including any evidence of adverse side effects, and the qualifications of the persons to be engaged in its experimental use. If from this evidence a new drug is considered deleterious to health the Minister may refuse to permit the proposed clinical testing. In the case of a disallowed submission, the manufacturer has the right to appeal the decision. Drugs expressly prohibited from sale are thalidomide and lysergic acid diethylamide. However, provision is made in the regulations whereby, under certain conditions, lysergic acid diethylamide may be sold by a manufacturer to an institution approved by the Minister for clinical use or laboratory research by qualified investigators. Any drug that can be classed as a sedative, hypnotic or tranquillizer is listed to be sold only on prescription. The licensing of persons dealing in certain drugs classed as barbiturates and amphetamines is required as well as the keeping of special records and the limitation of their use to medical purposes.

The Food and Drug Directorate also administers the Proprietary or Patent Medicine Act which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act, as revised in 1961. This legislation prescribes a maximum penalty of seven years with no minimum for illegal possession; a maximum penalty for trafficking of life imprisonment; and minimum and maximum penalties for illegal export and import of seven years and life imprisonment, respectively. Persons convicted of offences under the Act who are found to be drug addicts may be sentenced for treatment, for an indeterminate period, in institutions operating under the penitentiaries system and the National Parole Board service, when Part II of the Act comes into force.

Subsection 4.—Medical Services

The Department of National Health and Welfare provides eight types of direct medical service through the Directorate of Medical Services. These are described in the following paragraphs.

Indians and Eskimos.—Responsibility for the general welfare, education and medical care of Indians is shared with the Indian Affairs Branch of the Department of Citizenship and Immigration, and of Eskimos with the Department of Northern Affairs and National Resources. The Department of National Health and Welfare provides medical and public health services to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. A large volume of the service in treatment and health education is rendered to patients through departmental out-patient clinics staffed by medical and other public health personnel. In remote areas, the key facility is frequently the departmental nursing station, a combined emergency treatment and public health unit having two to four beds under the direction of one or two nurses; about 43 of these are operated throughout Canada.

As arrangements develop in the provinces for integrating Indians under the provincial services, the Department reduces the number of hospitals and other facilities provided specifically for Indians. The Department maintains 18 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. Indians are now included under all provincial prepaid insurance plans for hospital care and other forms

of insured medical care but in almost all cases the total cost of mental and tuberculosis care is borne by the Federal Government. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

Northern Health.—Because of the special problems in developing health services in the Far North, the Directorate of Medical Services has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, the Department undertakes the functions of a health department for the Council of the Northwest Territories and assists the territorial government of the Yukon Territory to provide certain health services. A close liaison is maintained with the federal departments directly responsible for administrative matters affecting these areas.

In the Yukon Territory, services for the total population administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Medical Services of the Department of National Health and Welfare. In the Northwest Territories similar services are provided, the costs being shared by the Department of Northern Affairs and National Resources and the Department of National Health and Welfare. Indigent residents are eligible for medical, dental and optical services as well as for tuberculosis and mental care.

Hospital insurance plans in both the Yukon and Northwest Territories came into operation in 1960.

Immigrants.—The Department of National Health and Welfare advises on the administration of sections of the Immigration Act dealing with health, and conducts in Canada and other countries the medical examination of applicants for immigration. It also provides care for immigrants who become ill en route to their destination or while awaiting employment. Further assistance in the provision of hospital and medical services is available to indigent immigrants during their first year in Canada, either from the Federal Government or from the province with federal sharing of costs.

Quarantine.—Under the Quarantine Act, all vessels, aircraft and other conveyances together with their crew members and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry and spread of quarantinable diseases in Canada. Fully organized quarantine stations are located at all major seaports and airports.

Under the provisions of the Leprosy Act, modern facilities for the diagnosis and treatment of leprosy are provided at Tracadie, N.B., for the small number of persons in Canada suffering from this disease.

Health Services for Mariners.—Under the authority of Part V of the Canada Shipping Act, the Department of National Health and Welfare provides prepaid health services for crew members of foreign-going ships arriving in Canada and of Canadian coastal vessels in interprovincial trade; crew members of Canadian fishing and government vessels may participate on an elective basis. Hospital care of crew members having residence in Canada is the responsibility of the provincial hospital insurance authority concerned.

Civil Aviation Medical Service.—Medical examiners are responsible for the standard of physical fitness of personnel flying civil aircraft.

Civil Service Health Counselling Service.—Formerly available chiefly to the public service in Ottawa, health counselling is now offered through medical services units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment can also be given if required.

Regulation of Hygienic Standards.—The Department of National Health and Welfare is responsible for maintaining hygienic standards in relation to all forms of inter-provincial and overseas means of transport in National Parks, in federal construction camps and on other federal property.

Subsection 5.—Health Research and International Health

Health Research.—Health research in Canada is carried on in universities, hospitals, research institutes and government departments. In the universities, relevant research is done by departments of basic medical sciences, medical and public health schools or faculties and by such departments as genetics and psychology as well as in special departments or institutes of research (see also Chapter VIII, Sect. 4, Subsect. 3). Hospitals used for teaching medical students also carry on considerable research, as do some of the larger non-teaching hospitals and mental institutes.

The Department of National Health and Welfare, the Medical Research Council (established in November 1960 to take over the work formerly carried on by the National Research Council Medical Division), the Department of Veterans Affairs and the Defence Research Board support extensive programs of research. Other important research centres include the Connaught Medical Research Laboratories, the Banting Research Foundation, the Charles H. Best Institute, the Institute of Microbiology and Hygiene, the Allan Memorial Institute and the Montreal Neurological Institute. Some non-governmental or voluntary agencies concerned with health generally, or with specific diseases, encourage and support research by various means including financial assistance.

International Health.—Canada actively assists and co-operates with the World Health Organization and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Capital and technical assistance are provided to underdeveloped countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the different technical co-operation schemes (see p. 148 and pp. 155-158); during 1963, 86 trainees arrived, bringing the total number of trainees in Canada during the year to 204. These persons were working in a wide range of health disciplines under the External Aid Program.

Canadian experts in health legislation, health administration and related areas undertook specific assignments abroad during the year and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of cobalt beam therapy units for cancer treatment centres in the Colombo Plan area, was continued.

At the Sixteenth World Health Assembly in May 1962, Canada was elected to name a person to serve for a three-year term on the Executive Board of the World Health Organization and in 1963 this officer was appointed Chairman of the Board. Canada's term of office on the Executive Board of UNICEF commenced at the beginning of 1962 and similarly extends over a three-year period.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 278).

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization and certain duties in connection with the Commission on Narcotic Drugs of the United Nations.

Subsection 6.—Radiation Protection

The use of radioactive materials by industry and public and private institutions in Canada is controlled by the Department of National Health and Welfare through a strict review of applications for radio-isotope licences. Follow-up field inspection of licensed groups is maintained. Specific recommendations for the safe handling of radioactive substances are prepared for the Atomic Energy Control Board. Continuous checks are carried out by the Department's film monitoring service of the amount of exposure to radiation registered on persons associated with the use of X-ray equipment throughout the country. Surveys are also maintained of radioactive fallout through air, rain and soil sampling carried out in co-operation with the Department of Transport and through continued analysis of milk and human bone samples.

Section 2.—Provincial and Local Health Services

Provincial and local health services may be grouped into several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and services for disabled and chronically ill persons.

Subsection 1.—General Public Health Services

Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services which includes environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education, and public health laboratories.

Environmental Health.—The control of factors in the environment that are harmful to physical health is a rapidly expanding area of public health activity. For many years, much of the work in this field was related to inspection duties long associated with community health sanitation, such as maintenance of pure milk, water and food supplies, supervision of plumbing and sewage disposal systems, and provision of general sanitary conditions in public areas. Increasing industrialization, however, has imposed added responsibilities calling for new techniques in public health engineering and sanitary services. Air pollution, water pollution and radiation are emerging as major environmental health problems, necessitating co-ordinated effort by governments and other agencies in research and in planning effective control measures.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industry management. Provincial agencies regulate working conditions and offer consulting and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.

Communicable Disease Control.—There are separate divisions of epidemiology or communicable disease control in six provinces; in the other provinces these functions are handled by provincial medical health officers. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures. All provincial health departments organize immunization programs for the public against diphtheria, tetanus, poliomyelitis, whooping cough and smallpox. Through agreement with the Federal Government, live oral poliovirus vaccine (Sabin) as

well as Salk vaccine is available by provincial health departments for immunization against poliomyelitis. Other agents such as gamma globulin may be provided under certain conditions for protection against measles and infectious hepatitis.

Maternal and Child Health.—Most provincial health departments have Maternal and Child Health Divisions under medical direction or have made other administrative arrangements to provide consultant services in this field. In addition, six of the provinces have consultant nursing services within these divisions. Provincial divisions provide advisory services to local health departments and to hospitals, conduct studies of local problems and needs, and assist in the training of health personnel and in the administration of National Health Grants, including the Child and Maternal Health Grant.

Local health departments serving a high proportion of the population carry out generalized public health programs, including the provision of maternal and child health services. The basic staff consists of a medical officer of health, public health nurses and sanitary inspectors. Programs and services for mothers and children may include prenatal education, home visiting, child health conferences and school health services. Other health personnel—dentists, nutritionists, health educators and social workers—share interests in the promotion of family health.

Dental Health.—All provincial health departments have dental health divisions which administer programs, varying under local conditions but directed almost entirely to health education and the care of children. Training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education are being undertaken in all provinces. Water fluoridation projects involving a total of 3,800,720 people are in operation in eight provinces and in the North. Four provinces—Alberta, Manitoba, Ontario and Nova Scotia—have set up, in conjunction with their dental schools, special courses for dental hygienists. In all ten provinces clinical care is provided for children in remote rural areas. A locally sponsored plan in which the cost of dental services for children is shared by the community and the provincial health department is in operation in more than 90 communities in British Columbia.

Nutrition.—Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; in other provinces, consultants in nutrition come under a broader grouping of departmental services.

Health Education.—In most provinces a professional full-time 'health educator' is a member of the public health team. A basic concern of provincial health information services is to stimulate public interest in important health needs.

Public Health Laboratories.—The public health laboratory was one of the earliest provincial services developed to assist local public health departments in the protection of community health and the control of infectious diseases. New central and branch laboratories have been set up in recent years and the scope of services has been expanded beyond the bacteriological examination of water, milk and food samples. Clinical bacteriology and special pathological services, including medical testing for physicians and hospitals, are steadily increasing in volume. Efforts to co-ordinate public health and hospital laboratory services, measures to bring laboratory facilities to rural areas, and devices to reduce the direct cost of clinical laboratory procedures to the individual are notable in the growth of public laboratory services.

Subsection 2.—Services for Specific Diseases or Disabilities

Each province has developed special programs to deal with health problems of particular severity and prevalence, many of which are chronic or long-term in nature. The services and facilities provided are generally similar across the country.

Mental Health.—Major developments in provincial mental health programs have included the expanding and modernizing of mental hospitals, the training of various kinds of psychiatric personnel, and the extension of community mental health services outside mental institutions. Assistance to patients in securing employment and in social adjustment following discharge from mental hospitals—a relatively new field of rehabilitation—is being promoted by voluntary groups and government agencies in several provinces.

With the exception of the municipally owned local institutions in Nova Scotia and hospitals in Quebec that operate under religious or lay auspices, most mental institutions are administered by provincial authorities. A great part of the cost is borne by the provincial governments, although a charge, according to ability to contribute, may be made for care in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba assumes a minimum maintenance cost for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario mental institution treatment is included in the hospital care insurance plan.

Most public mental institutions provide care and treatment for all types of mental illness; as facilities expand, it is becoming possible to segregate those under intensive treatment from those receiving long-term care. Some provinces maintain separate accommodation for certain categories of the mentally ill. For example, in British Columbia and Alberta, homes for the senile aged are an integral part of the mental institution system. Quebec has separate institutions for epileptics. Eight provinces operate schools for residential treatment and education of mentally defective persons and the maintenance of mentally retarded children in approved boarding or foster homes is receiving government support in a number of provinces. Local day classes, usually sponsored by organizations of parents, offer training opportunities for mentally deficient children in the community.

As the needs of patients are more fully understood and better methods of treatment develop, the daily routine of the mental patient is becoming less restrictive, as is shown by the increasing number of persons coming voluntarily for treatment. Custodial care and locked doors are giving way to open wards where patients may have unrestricted access to grounds and to occupational and recreational areas.

One of the greatest changes in the past decade has been in the extension of community mental health services outside mental institutions. General hospitals have expanded their psychiatric services in both in-patient and out-patient departments. About 50 general hospitals have organized units where psychiatric treatment is provided by professional staffs. Community clinics, where mental disorder may be treated at an early stage and guidance given to children and parents, play an important part in prevention and treatment within the home environment. Fostering this expansion of service are provincial health departments, municipalities or health units, mental institutions, general and allied special hospitals, school boards and voluntary organizations. Day and night care centres form part of the psychiatric service of two large general hospitals in Montreal and day care centres, admitting patients on a nine-to-five basis, are conducted in several other hospitals.

Tuberculosis.—The fight against tuberculosis is one of the major programs of all health departments. Free hospitalization and free drug treatment, both on an in-patient and domiciliary basis, is provided. In two provinces extensive BCG programs are in effect and in the other provinces this prophylactic is provided to groups at special risk. Special case-finding programs in the form of community tuberculin and X-ray surveys, surveys of high risk groups, and the follow-up of all arrested tuberculosis cases are routine. These activities have resulted in a decline in the Canadian tuberculosis death rate of 82 p.c. since 1951. In 1962 the rate was 4.2 per 100,000 population. The number of beds set up in public sanatoria declined from a peak of 18,977 in 1953 to 8,436 in 1963.

Cancer.—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education. In cancer detection and treatment, specialized

medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; four others have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics, located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. In at least five provinces, these benefits apply also to out-patients. In others, the previous pattern of services to out-patients—that of assessing costs of treatment in relation to ability to pay—is still in effect. Comprehensive free medical programs for cancer patients are in operation in Saskatchewan and Alberta and for cancer in-patients in New Brunswick.

Venereal Disease.—Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.—Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Legislation in Newfoundland, New Brunswick, Nova Scotia and Quebec authorizes the setting up of similar agencies to initiate research and education studies in those provinces.

Other Diseases or Disabilities.—Services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. A brief description of the programs of some of these agencies is given in the 1962 Year Book, pp. 270-274 (not carried in this edition), and in Subsection 4 on Services for the Disabled and Chronically Ill, pp. 285-286.

Subsection 3.—Public Medical Care

Saskatchewan and Alberta operate province-wide medical care insurance programs. About half the population of Newfoundland receives physicians' services at home or in hospital under the provincially administered Cottage Hospital Medical Care Plan which is financed in part on a premium basis. Medical indigents not under the plan may also receive care at provincial expense. In addition, all Newfoundland children under the age of 16 years are entitled to free medical and surgical care in hospital.

For several years the Provinces of Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia, and more recently the Province of Manitoba, have supported the cost of providing certain personal health care services for specified categories of persons in need and receiving public assistance. In British Columbia, Alberta and Ontario the beneficiaries include persons in receipt of means-tested old age security supplements, old age assistance, blindness and disability allowances and mothers' allowances, and certain child welfare cases and unemployed persons in need. Nova Scotia covers only mothers' allowance recipients and their dependants, and blindness allowance recipients. Saskatchewan's provincial program excludes disabled persons, blind persons not receiving a supplemental allowance, and persons on local relief (social aid), these categories being the responsibility of the municipality of residence. Old age assistance recipients are covered for hospital care and medical care only. The Manitoba program covers cases of need among the aged and infirm including those in nursing homes or institutions, the blind and the physically or mentally disabled, mothers with custody of dependent children, and neglected children. In all provinces, indigent persons not covered by these programs may have necessary care financed in the municipalities in which they reside.

Under the Ontario program, the principal service covered is physicians' care in the home and office, including certain minor surgical procedures and prenatal and postnatal care. Emergency drugs are a benefit and basic dental care is available to the children of mothers' allowance recipients. The programs in Nova Scotia, Saskatchewan, Alberta and British Columbia provide for complete medical care in the home, office and hospital. In addition, all generally used prescription drugs are included in British Columbia and Saskatchewan (although these carry a 50-p.c. co-charge limitation in Saskatchewan for non-life-saving drugs where financial hardship is not demonstrated). Dental care and optical care are covered in the three westernmost provinces, sometimes on special authorization only and/or with dollar limits. Services that are paid for in Manitoba include physicians' care in the home, office and hospital as well as dental and optical care, basic drugs, diagnostic tests, remedial care, appliances and physiotherapy. Chiropody, chiropractic and emergency transportation may also be provided.

In Alberta, Saskatchewan, Manitoba and Nova Scotia, health services for eligible provincial public assistance recipients are wholly financed from provincial general revenues. In British Columbia costs are shared on a 90-10 basis, with the municipalities assuming their 10-p.c. share on a basis proportionate to population; in Ontario per capita contributions toward the cost of medical services for unemployed on relief are shared on an 80-20 basis with the municipality of residence.

Since July 1962, every person who has resided in the Province of Saskatchewan for three months (and is not entitled to receive medical services from the Government of Canada) and has paid, or has had paid on his behalf, any premium he is required to pay under the Saskatchewan Medical Insurance Act, is entitled to have payment made on his behalf from the Medical Care Insurance Fund, for medical, surgical and obstetrical care, without limit, in the office, home or hospital, from his physician of choice (including payment at specialists' rates for referred specialists' services). Out-of-province benefits are also paid, on a patient-reimbursement basis. There are no restrictions relating to age or pre-existing conditions. Physicians providing insured medical services may elect to receive payment in a number of ways: (1) they may contract for a salary or similar arrangement; (2) they may choose to receive direct payment from the Medical Care Insurance Commission at 85 p.c. of the 1959 Schedule of Minimum Fees of the College of Physicians and Surgeons of Saskatchewan as payment in full; (3) they may bill patients directly, the patient in turn being paid by the Commission, on presentation of an itemized account or receipt, an amount equal to 85 p.c. of the assessed fee; (4) the physician may practise for private fees, whereby the patient assumes all responsibility for payment. In addition, patients may enrol, voluntarily, with an approved health agency upon payment of a fee to cover administration costs. The agency pays the physician an amount equal to the amount paid to the agency by the Commission in respect of the physician's assessed account. The Saskatchewan medical care insurance program is financed from personal premiums plus general revenue contributions.

On Oct. 1, 1963, the Government of Alberta introduced a new medical care plan designed primarily to help residents with low incomes who desire voluntarily to purchase medical care insurance. The scheme provides for the subsidization of the premium costs of certain classes of persons as designated by their taxable incomes, marital status and number of dependants, for insured services that may include physicians' attendance in home, office or hospital, surgery and specialist and general diagnostic services. The amount of available subsidy is determined by the category of applicant rather than the premium paid. Services may be insured by all residents through Medical Services (Alberta) Incorporated or other approved agencies at rates not exceeding maximums set by the province.

Subsection 4.—Services for the Disabled and Chronically Ill

Hospitals, public health departments, rehabilitation centres and voluntary agencies are placing greater emphasis on the provision of rehabilitation services to the chronically ill and disabled, an objective encouraged by the success of rehabilitation programs for war veterans, injured workmen and other groups and, more recently, by the federal-provincial vocational rehabilitation program (see pp. 305-306). The National Health Grant Program and the hospital insurance plans have promoted better preventive health services and patient care, for example, the effective poliomyelitis inoculation programs and the development of physical medicine and rehabilitation facilities in general and chronic hospitals and separate rehabilitation centres. Similarly, the rapid expansion of psychiatric units in general hospitals with out-patient and day care facilities has overcome some of the barriers to treatment of the mentally ill. There is greater concern, also, for the standards of care in nursing homes, homes for the aged and related facilities.

Some communities and health districts operate services for the chronically ill and elderly in their own homes including home nursing, homemaker services, organized home care and services for the homebound; several out-patient geriatric centres are also in operation. Although public health departments are more aware of their primary role in identifying chronically ill and disabled persons of all ages, in the study of the health and social problems of this group and in co-ordinating services, existing services and facilities are generally considered to be inadequate, partly because of shortages of rehabilitation personnel.

Medical rehabilitation services are chiefly oriented to functional recovery although some centres include social, vocational or educational services. By the end of 1962, physical medicine and rehabilitation departments were established in 30 general hospitals, 10 chronic hospitals and 14 children's hospitals, as well as in the veterans hospitals. In addition, there were 43 independent rehabilitation centres (14 of them in-patient centres) including 23 children's centres and four workmen's compensation centres, serving the more seriously disabled. Most of the public mental hospitals and tuberculosis sanatoria provide one or more of the services that aid in rehabilitation such as physical and occupational therapy, social service and after-care and recreational, educational and vocational services. Community agencies co-operate in the post-hospital adjustment and rehabilitation of these patients. The best example of comprehensive medical-social care of the chronically ill and disabled is the integrated program of the Department of Veterans Affairs.

Complementing the general and specialized medical rehabilitation programs are the numerous out-patient clinics, held mainly at the teaching hospitals, for a broad range of chronic or disabling conditions. Among these are clinics for orthopaedic conditions, speech and hearing, vision, glaucoma, cleft palate, cystic fibrosis, diabetes, arthritis and rheumatism, and cardiac conditions; mental health clinics also serve the mentally retarded (see p. 282). Many voluntary agencies concerned with specific disabilities or health services provide patient services that assist in home care and rehabilitation. In all provinces voluntary agencies also operate sheltered workshops for the disabled and, on a limited scale, employment and recreation services to the homebound.

A number of provincial health departments have set up handicapped children's registries and, in co-operation with the handicapped children's societies, they provide remedial treatment and education at children's hospitals, rehabilitation centres and special schools. Several provinces are extending those registries to include disabled adults. The public school systems in the larger cities operate special classes for children with orthopaedic, vision, hearing and mental defects; voluntary agencies also sponsor special classes for the

mentally retarded, cerebral palsied, emotionally disturbed and other groups. In addition, there are nine residential schools for the deaf and six for the blind, most of them administered by the provincial education departments.

The Department of National Health and Welfare supports provincial rehabilitation activities through the National Health Grants designated for the extension of medical rehabilitation and crippled children's services and for rehabilitation of the mentally ill or deficient, the tuberculous and other chronically ill persons. In the year ended Mar. 31, 1963, most of the \$1,345,629 spent under the Medical Rehabilitation and Crippled Children Grant (of a total amount of \$2,625,000 available on a matching basis) was used to extend medical rehabilitation services in hospitals, rehabilitation centres and other facilities. Grant funds were also used for the professional training of medical rehabilitation personnel, for the support of eight schools of physiotherapy, occupational therapy and audiology, and for equipment and research. Effective 1963-64, this Grant was increased by \$200,000, on a non-matching basis, and the increase has been used to establish three research and training units for the study of prosthetic problems. Under the National Welfare Grants, also effective 1963-64, there is provision to assist the provinces, on a matching basis, for programs for certain phocomeliac children.

Section 3.—Hospital and Other Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 273-276). Another project deals with Civil Service illness. Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 247-250; those on hospital statistics in Subsection 1 following; and those on notifiable diseases and illness in the Civil Service in Subsection 2.

Subsection 1.—Hospital Statistics*

For statistical purposes, hospitals are classified in two ways—first by ownership, i.e., public, private or federal, and second by type, i.e., general, allied special (including chronic, convalescent, rehabilitation, maternity, communicable diseases and orthopaedic hospitals), mental and tuberculosis. General hospitals are grouped by size, according to their rated bed capacity.

In 1963 there were 1,346 hospitals of all types operating in Canada; they had a rated bed capacity of 202,306 (excluding bassinets), which amounts to 10.7 beds per 1,000 population. Of the total, 990 were general hospitals with 107,617 beds, 227 were allied special hospitals with 18,198 beds, 87 were hospitals for mental patients with 68,030 beds, and 42 were tuberculosis sanatoria with 8,461 beds. It should be noted that a recent re-evaluation of facilities resulted in the removal from the list of "hospitals" of a number of institutions providing mainly custodial or domiciliary care.

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics, Vols. I to VII* (Catalogue Nos. 83-210 to 83-216); *Mental Health Statistics, Vol. III* (Catalogue No. 83-205); *Tuberculosis Statistics, Vol. II* (Catalogue No. 83-207); and *List of Canadian Hospitals and Related Institutions and Facilities* (Catalogue No. 83-201).

¹ Based on estimated population as at June 1, 1963.

² Mental hospitals only; exclusive of psychiatric units in other hospitals.

³ Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

Information on the number of hospitals operating in Canada and their bed capacities (Table 5) was available for the year 1963 at the time of preparation of this Chapter, but the most recent data on movement of patients, average stay, paid hours and revenue and expenditure (Tables 6-12) were preliminary 1962 figures.

Separations of adults and children from hospitals in 1962 numbered 2,920,930, or 158 per 1,000 population. Total patient-days spent in hospital amounted to 61,200,287, an average of 167,675 persons a day, or nine out of every 1,000 population.

¹ Adults and children. ² Discharges and deaths.
does not include psychiatric or mental units in other hospitals.
tuberculosis units in other hospitals.

³ As at June 1.

⁴ Mental hospitals only;

⁵ Tuberculosis hospitals only; does not include

Average length of stay in public general hospitals in 1962 was 10.1 days (10.0 in 1961), increasing gradually from 6.9 days in hospitals with fewer than 10 beds to 14.2 days in those with 1,000 or more beds. The availability of specialized and referral services in larger hospitals tends to lengthen the stay.

¹ Medical and surgical supplies are included with drugs.

Diagnoses of Patients in Institutions for Tuberculosis and for Psychiatric Disorders.—There were 4,824 patients with respiratory tuberculosis on the books of tuberculosis institutions on Dec. 31, 1962, and 63 p.c. of them were males. Except for the age groups under 20 years, males outnumbered females in all age groups. The peak frequency for men (963) occurred in the 60+ age group, and for women (554) in the 20-39 age group.

Of the 75,300 psychiatric patients reported at Dec. 31, 1962, 34 p.c. suffered from schizophrenia, the most frequent form of psychosis (insanity); 25 p.c. suffered from other forms of psychosis; and 31 p.c. were mentally deficient. In most diagnostic classes males outnumbered females; exceptions were certain psychoses, neuroses and drug addiction.

13.—Diagnoses of Patients on the Books of Reporting Tuberculosis Hospitals, by Age Group and Sex, as at Dec. 31, 1962

NOTE.—Figures include patients in 65 tuberculosis hospitals and patients in tuberculosis units in general hospitals but exclude tubercular patients in mental hospitals.

Subsection 2.—Notifiable Diseases and Other Health Statistics*

In addition to the administrative, or non-morbidity, type of hospital statistics dealt with on pp. 286-296, health statistics collected nationally include series on notifiable diseases and illness among federal civil servants; these are dealt with briefly below.

Notifiable Diseases.—In terms of number of new cases, the major infectious diseases reportable on a national basis were, in 1962, the venereal diseases combined (20,133 cases), infectious and serum hepatitis (12,538 cases), and scarlet fever and streptococcal sore throat (10,241 cases). Despite its relatively high level, the incidence of scarlet fever and streptococcal sore throat was 56.3 p.c. below the peak reached in 1959; the rate of infection was 55.1 cases per 100,000 population, which compared favourably with the corresponding 1959 rate of 134.2. In proportion to population, the province most severely affected in 1962 was Prince Edward Island, where the rate was more than 30 times that for the country as a whole.

Year-to-year increases, which exceeded the rate of growth in the population at risk, occurred between 1959 and 1962 in the incidence of the venereal diseases, the rate of new infections rising from 97.3 to 108.4 per 100,000 population. As in 1961, British Columbia contributed the largest number of cases, but the case-rate for that province (257.7 per 100,000 persons) was lower than those for the Yukon Territory, the Northwest Territories and Alberta. Among the reportable types of venereal disease, gonorrhoea accounted for 87.9 p.c. of total cases nationally, and for 92.6 p.c. of the British Columbia cases.

The rate of viral hepatitis infections increased from 27.1 cases per 100,000 population in 1959 to 67.5 in 1961 and remained at that level in 1962.

In recent years the most significant decline in the incidence of a notifiable disease has been the falling off in reported cases of paralytic poliomyelitis. Contributing to the decrease have been the development of vaccines and mass inoculation and feeding programs undertaken by public health authorities. Only 89 new cases were reported during 1962; this was the smallest number for any year since 1949, the first year statistics on this disease were compiled nationally.

* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

Illness in the Federal Civil Service.—A study of the incidence and duration of illness among federal civil servants is made annually from data supplied by medical certificates, which are required for all absences of more than three days at one time and for

absence of any duration after seven days of casual leave have been taken. During the calendar year 1962, of an estimated 151,400 civil servants covered by Civil Service Leave Regulations, 51,562 reported ill by medical certificate.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as old age security and family allowances, and programs such as unemployment insurance and the National Employment Service where nation-wide co-ordination is required, are administered federally. Substantial federal aid is given to the provinces in meeting the costs of public assistance. The Federal Government also provides services for special groups such as veterans, Indians, Eskimos and immigrants.

The Department of National Health and Welfare is generally responsible for federal welfare matters; the Departments of Veterans Affairs, Citizenship and Immigration, and Northern Affairs and National Resources also operate programs for specific groups. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years* who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A Regional Director for the Yukon and Northwest Territories is located at Ottawa.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly and for a maximum period of one year, is not payable for a child eligible for family allowances.

* In his 1964 Budget Speech, the Minister of Finance announced that the government would propose that family allowances be paid in respect of children aged 16 and 17 who are attending full-time educational or training courses. These allowances would be in the amount of \$10 a month and would be payable 12 months a year.

1.—Family Allowances Statistics, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books, beginning with the 1947 edition.

¹ Based on gross payment for March.

Subsection 2.—Old Age Security

The Old Age Security Act of 1951, as amended, provides a universal pension of \$75 a month payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. The rate was raised from \$65 to \$75 a month effective Oct. 1, 1963. To qualify for pension a person must have resided in Canada for ten years immediately preceding its commencement or, if absent during that period, must have been actually present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. Payment of pension may be continued for any period of residence outside Canada if the pensioner has resided in Canada for at least 25 years after attaining the age of 21 or, if he has not, it may be continued for six consecutive months exclusive of the month of departure from Canada. The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital.

The pension is financed on the pay-as-you-go method through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$120 a year, a 4-p.c. tax on taxable personal income. Yields from these taxes are paid into the Old Age Security Fund; if they are insufficient to meet the pension payments, temporary loans or grants are made from the Consolidated Revenue Fund.

Persons in receipt of old age assistance (see p. 303) who reach age 70 are automatically transferred to old age security. Others make application to the regional offices. Recipients of old age security who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

2.—Old Age Security Statistics, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books beginning with the 1952-53 edition.

Subsection 3.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed establishing a national system of unemployment insurance which is outlined in Chapter XVIII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. Statistics of positions offered and placements made are given in Chapter XVIII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter XI.

Welfare Services for Indians and Eskimos.—Indians and Eskimos benefit as other Canadians under the federal income maintenance programs, but welfare services are administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively, with some provincial participation. This topic is covered in the Population Chapter (pp. 190-198).

Section 2.—Federal-Provincial Programs

Subsection 1.—Old Age Assistance

The Old Age Assistance Act of 1951, as amended, provides for federal reimbursement to the provinces for assistance to persons aged 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching age 70 a pensioner is transferred to old age security. The federal contribution may not exceed 50 p.c. of \$75 a month (raised from \$65 a month in December 1963) or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. All provinces use a maximum payment of \$75 a month and the income limits set out below. In May 1964, the Yukon and Northwest Territories were using a maximum payment of \$65.

For an unmarried person, total income allowed, including assistance, may not exceed \$1,260 a year. For a married couple it may not exceed \$2,220 a year or, when the spouse is blind within the meaning of the Blind Persons Act, \$2,580 a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or the War Veterans Allowance Act.

Recipients of old age assistance who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

3.—Old Age Assistance Statistics, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books, beginning with the 1952-53 edition.

¹ The average monthly assistance was \$61.09 for June 1962, the first month for which an average based on the maximum of \$65 a month was computed.

Subsection 2.—Allowances for Blind Persons

The Blind Persons Act of 1951, as amended, provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of \$75 a month (raised from \$65 a month in December 1963) or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. All provinces use a maximum payment of \$75 a month and the income limits set out below. In May 1964 the Yukon and Northwest Territories were using a maximum payment of \$65.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence. For an unmarried person, total income including the allowance may not exceed \$1,500 a year; for a person with no spouse but with one or more dependent children, \$1,980; for a married couple, \$2,580. When the spouse is also blind, income of the couple may not exceed \$2,700. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

Recipients of blindness allowances who are in need may receive supplementary aid under general assistance programs in the provinces. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

4.—Statistics of Allowances for the Blind, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books beginning with the 1952-53 edition.

¹ The average monthly allowance was \$62.65 for June 1962, the first month for which an average based on the maximum of \$65 a month was computed.

Subsection 3.—Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act which requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings; the impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living. The federal contribution may not exceed 50 p.c. of \$75 a month (raised from \$65 a month in December 1963) or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility. All provinces use a maximum payment of \$75 a month and the income limits set out in the following paragraph. In May 1964, the Yukon and Northwest Territories were using a maximum payment of \$65.

For an unmarried person, total income including the allowance may not exceed \$1,260 a year. For a married couple the limit is \$2,220 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$2,580 a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mothers' allowance.

The allowance is not payable to a patient in a mental institution or a tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables, or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or another individual. When a recipient is required to enter a public or private hospital, the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release, but for the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, the allowance may continue to be paid.

In recent years, disabilities in the two medical classes—mental, psychoneurotic and personality disorders, and diseases of the nervous system and sense organs—have been found to be the most prevalent among the persons becoming eligible for allowance, followed by diseases of the circulatory system. Mental deficiency, the most frequently occurring disability, has accounted for over one quarter of all cases granted an allowance.

Recipients of disability allowances who are in need may receive supplementary aid under general assistance programs in the province. Where the amount of aid is determined through an individual assessment of need, which takes the recipient's requirements and resources into consideration, the Federal Government may share in it under the Unemployment Assistance Act.

5.—Statistics of Allowances for Disabled Persons, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books beginning with the 1956 edition.

¹ The average monthly allowance was \$64.04 for June 1962, the first month for which an average based on the maximum of \$65 a month was computed.

Subsection 4.—Unemployment Assistance

Under the Unemployment Assistance Act 1956, as amended, the Federal Government may enter an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities to persons and their dependants who are unemployed and in need. All provinces and the two territories have signed agreements under the Act. The rates and conditions of assistance are determined by the provinces and, in some cases, by their municipalities. Payments to both employable and unemployable persons are sharable under the agreements, as are the costs of maintaining persons in homes for special care, such as nursing homes or homes for the aged. The Federal Government shares in additional assistance paid to needy persons in receipt of old age security pensions, old age assistance, blind persons' allowances, disabled persons' allowances and unemployment insurance benefits, where the amount of the assistance paid is determined through an assessment both of the recipient's basic requirements and of his financial resources.

During the year ended Mar. 31, 1963, the Federal Government made payments for unemployment assistance amounting to \$96,476,627. The federal share of assistance costs shown in Table 6, however, is based on payments for the months in which the assistance was actually given and, since claims may be submitted at any time within six months after the month to which they relate, the figures for each fiscal year include certain reimbursements made to the provinces after the end of that year.

6.—Unemployment Assistance, by Province, Year Ended Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the Act to 1962 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

Subsection 5.—Fitness and Amateur Sport Program

The Fitness and Amateur Sport Act, 1961 brought a new focus and impetus to the development of fitness in Canada and to efforts to raise levels of participation and proficiency in both competitive and non-competitive sports. The Act is administered by the Fitness and Amateur Sport Directorate in the Welfare Branch of the Department of National Health and Welfare. The legislation provides for an annual \$5,000,000 allocation "to encourage, promote and develop fitness and amateur sport". The program operates through three main channels. Grants are made to national organizations for projects of national interest and to assist national and international aspects of the program, and to the provinces to develop and extend community effort. In addition, federal co-ordinating and developmental work is carried on by the Department in co-operation with other agencies concerned with different aspects of fitness and amateur sport.

A 30-member National Advisory Council on Fitness and Amateur Sport advises the Minister on the program and committees of experts advise on technical aspects as required.

One of the main tasks undertaken, in addition to aiding participation in sports and fitness events, has been the building up of training for leaders, coaches and other professional personnel at the community level; the Act bolsters and enlarges the emphasis previously given to this work by programs in operation in the provinces. Scholarships, fellowships and bursaries assist persons in undertaking professional studies in physical education, recreation and the medical aspects of fitness.

The Act provides for aid to research on fitness matters and for surveys of resources, facilities and personnel. The urgent need for new and greatly expanded informational material for both the expert and the public has long been recognized; through the new program, instructional material suitable to Canadian needs is developed with the co-operative efforts of experts from across Canada.

Subsection 6.—National Welfare Grant Program

The National Welfare Grant Program, established in November 1962, is designed to help develop and strengthen welfare services in Canada. In the year ended Mar. 31, 1964, \$500,000 was allocated to the program, which is scheduled to grow at the rate of \$500,000 each year until an annual amount of \$2,500,000 is reached. The program consists of a General Welfare and Professional Training Grant and of a Welfare Research Grant. Provincial governments, municipal welfare departments, non-governmental welfare and correctional agencies, universities and individuals may be the ultimate recipients of grants under one or more provisions of the program. Some are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare, which actually makes the award on a cost-sharing basis with the Federal Government.

General welfare, bursary, training and staff development grants are shared provisions. General welfare grants provide funds for projects to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services in child welfare, aging, general assistance and other welfare fields. Bursaries are provided for full-time graduate training at Canadian schools of social work, and training grants are available for employees of government and voluntary welfare agencies who are granted leave for this purpose. Staff development grants provide support for a wide variety of staff training programs for personnel employed, or to be employed, in public and non-governmental welfare agencies at the direct service, supervisory and administrative levels.

The other provisions of the program are administered and financed by the Federal Government. Welfare scholarships are awarded, on the basis of annual nation-wide competition, for graduate study in Canadian schools of social work, to a limited number of applicants who have completed at least their undergraduate studies with high academic standing. Fellowships are awarded in the same way for advanced study at Canadian and foreign universities to applicants who have demonstrated leadership qualities and ability in the fields of administration, teaching and research in Canadian welfare. Teaching and field instruction grants assist Canadian schools of social work with the salaries of additional staff required to implement the welfare grant program.

Under the Welfare Research Grant, funds are provided for a variety of surveys, studies and research projects undertaken by public and voluntary welfare and correctional agencies, universities and research institutions. Priority is given to those projects holding promise of significant progress in the organization, co-ordination and staffing of existing welfare services and in the development of new services focused on the prevention of welfare problems and dependency.

Subsection 7.—Vocational Rehabilitation

The nation-wide vocational rehabilitation program, started in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Under federal-provincial agreements to share equally the costs of co-ordination, assessment and provision of services to disabled individuals, of training personnel and of research, the provinces have developed comprehensive programs in co-operation with existing services. Services, which may be either provided directly or obtained from other agencies or individuals by provincial rehabilitation authorities, include medical, social and vocational assessment, counselling, restorative services, vocational training and employment placement. They are designed to assist individuals having a substantial physical or mental

disability to become vocationally useful in gainful employment or in the home. A provincial co-ordinator or director of rehabilitation, placed in the health or welfare department, is responsible for the co-ordination and administration of vocational rehabilitation services to disabled individuals. In 1963, the provincial staff employed in vocational rehabilitation totalled 140.

The National Co-ordinator in the Civilian Rehabilitation Branch, Department of Labour, administers the federal aspects of this program. A National Advisory Council composed of representatives of the provinces, employers, labour, the medical profession, national voluntary agencies and the universities, and a federal Interdepartmental Committee on Vocational Rehabilitation and the Co-ordination of Rehabilitation Services have been formed. In the year ended Mar. 31, 1963, federal-provincial expenditures under the program (exclusive of vocational training) totalled \$666,290. Full reports were received on 1,814 disabled persons rehabilitated during the year; before rehabilitation most of these persons and their dependants relied on private or public assistance for support but following rehabilitation the estimated amount earned by those gainfully employed was \$3,400,000.

Although administered separately, medical rehabilitation, vocational training and special employment services for the handicapped are available as integral parts of the federal-provincial rehabilitation program. Suitable training where required is supplied through the federal-provincial agreements made under the Technical and Vocational Training Assistance Act administered by the Department of Labour which provides for equal sharing by Canada and the provinces of the cost of approved programs for the training of disabled persons who require such training to fit them for gainful employment. The training costs cover pre-vocational preparation, tuition, books and supplies, maintenance allowances, travel expenses and extra costs necessitated by disability. Disabled persons approved by provincial training selection committees may attend regular provincial or municipal vocational schools, private trade schools, universities, special classes, or be trained on the job. During 1962-63 there were 2,968 disabled persons enrolled in various courses; federal payments amounted to \$748,601.

The National Employment Service undertakes job placement of disabled persons with occupational handicaps. Employment liaison officers of the Special Services Section, who advise on employment conditions and the working capabilities of disabled persons, have been seconded to the offices of the provincial co-ordinators of rehabilitation in five provinces. Referrals for job placement are made to some 350 Special Services Officers in the local employment offices. Placements of handicapped persons who required assistance in finding work in 1963 (including those referred from provincial rehabilitation authorities) numbered 18,030.

The Federal Government provides direct services for particular groups through programs administered by the Department of Veterans Affairs for disabled, chronically ill and aged veterans, by the Department of Citizenship and Immigration for disabled and handicapped Indians, and by the Department of Northern Affairs and National Resources for the training and resettlement of disabled Eskimos and Indians within its jurisdiction.

Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include general assistance and social allowances, mothers' allowances, services for the aged, and child care and protection. In most provinces responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration of welfare services is carried

out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

In recent years, the provinces have assumed a substantial share of the costs of general assistance or residual aid, and some have broadened the area of social allowances, formerly limited almost entirely to mothers' allowances, in which the municipalities do not share costs. The financial contributions of the Federal Government to the provinces for unemployment assistance (see p. 306) has doubtless been an important contributing factor in these developments.

All provinces continue to give consideration to the need for planning on behalf of older citizens. A number have increased their capital or maintenance grants to municipalities and to voluntary groups for homes for the aged and are assisting in the construction of low-rental housing projects.

The main efforts in child welfare have been directed toward improvement of standards and greater flexibility of services, with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions, and the finding of adoption homes for all children in need of them.

The public services are supplemented by an impressive number of voluntary agencies which also contribute to community welfare, including the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of the services they render, although, with the exception of the semi-public children's aid societies, their main support may be from united funds or community chests, or from sponsoring organizations.

Subsection 1.—Mothers' Allowances

All provinces make provision for allowances to needy mothers. A number of provinces include such allowances in a broadened program of provincial allowances to several categories of persons with long-term need. There is a tendency to incorporate this legislation with general assistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid is provided to needy mothers under the general assistance program and in the same way as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalents are payable from provincial funds to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers may be eligible under particular circumstances in most provinces.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year. One province has a citizenship requirement.

The numbers of families and children assisted in each province as at Mar. 31, 1963, together with the amounts of benefits paid during the year are given in Table 7 and rates of benefit as at April 1964 in Table 8.

7.—Mothers' Allowances, by Province, as at Mar. 31, 1963 with Totals for 1959-63

NOTE.—Provincial figures for each year from the inception of the allowance to 1962 are given in the corresponding table of previous Year Books.

Province	Families Assisted	Children Assisted	Payments during the Year Ended Mar. 31

¹ An additional 2,563 families with 7,542 children were assisted under Part III of the Public Welfare Act; cost of allowances for this group is included in total payments for all groups under Part III. ² No separate figures are available. ³ Exclusive of British Columbia. ⁴ Approximate.

8.—Maximum Monthly Rates under Provincial Mothers' Allowances Programs, April 1964

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Nfld.....	Food: \$35 or \$37 depending on age of child. Clothing: \$5 for each person. Rent: up to \$20 monthly in rural and to \$30 monthly in urban areas. Fuel: up to \$10.	Food: \$10 for each child under age 16; \$12 for each child age 16 or over. Clothing: \$5.	\$20	None set.	In special circumstances up to \$30 a month additional if necessary for proper support of family.
P.E.I.....	\$70	\$5	No additional allowance granted.	\$125	None granted.
N.S.....	No set maximum; rates are based on average family income for community in which family lives.		Included in budget on which allowance is based.	\$90	None granted.
N.B.....	\$60	\$10	No additional allowance granted.	\$115	Director may grant an additional \$10 for rent if circumstances require it, but only if allowance paid is below maximum.
Que.....	\$85	\$10	\$10	None set (minimum granted \$5).	A supplementary allowance may be granted according to need.

**8.—Maximum Monthly Rates under Provincial Mothers' Allowances Programs,
April 1964—concluded**

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Ont.	\$120 for mother or father and one child. \$30 for one child living with foster mother.	\$16 for 2nd child \$14 for 3rd child \$12 for 4th child \$10 for 5th child. \$25 for 2nd foster child \$15 for each additional foster child.	Included in budget on which allowance is based.	\$180	An increase in food allowance may be granted on medical recommendation. A fuel allowance of up to \$24 a month may be granted from Sept. 1 to Mar. 31. An increase of 20 p.c. in fuel allowance may be granted under special circumstances.
Man.	Food, Clothing and Personal Needs: \$52-\$64 depending on age of child. Shelter: rent to \$55, or current taxes and insurance at actual cost, minor repairs to \$125 a year, principal and interest on mortgage or agreement for sale up to \$55 less taxes and insurance. Utilities: up to \$7.	\$14 for child up to 3 years \$16 for child 4-6 years \$21 for child 7-11 years \$26 for child 12-18 years (subject to reductions for 4th and each additional child).	\$25	None set.	\$10 for rent if necessary. Housekeeper service as required. Fuel allowance for eight months. For special needs not covered by basic schedule items, up to \$150 a year.
Sask.	Food, Clothing, Household and Personal Needs: \$51.80-\$67.00 depending on age of child Rent: \$40 Fuel: up to \$15.15 Utilities: up to \$11.	\$17.40 for pre-school child \$24.35 for child 6-11 years \$29.30 for child 12-15 years \$32.60 for child 16-18 years (subject to reductions for fourth and each additional person).	\$31.50	None set.	Special food allowance may be granted on medical recommendation. An allowance for a housekeeper may be granted if necessary.
Alta.	Food and Clothing: \$53.87-\$72.27 depending on age and sex of child. Rent, Fuel, Utilities: according to community standards.	\$16.00 for food and clothing for infant under 1 year. \$12.10-\$28.30 for food for child 1-18 years depending on age and sex. \$5.30-\$10.00 for clothing for child 1-19 years depending on age and sex, subject to 10-p.c. increase in food allowance for a family of two and a reduction of 5 p.c. in the allowance for food and clothing for a family of seven or more.	\$31.60	None set.	An increase in food allowance may be granted on medical recommendation.
B.C.	Allowances to needy mothers provided under the Social Assistance Act and not separable.				

Subsection 2.—General Assistance

All provinces make legislative provision for general assistance on a means or needs test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. Where necessary, the aid may be for maintenance in homes for special care. Besides financial aid for the basic needs of food, clothing, shelter and utilities, a number of provinces also provide incapacitation or rehabilitation allowances, counselling and homemaking services, and post-sanatorium care. This assistance, with some exceptions, is administered by the

municipality with substantial financial support from the province, which, in turn, is reimbursed by the Federal Government under the Unemployment Assistance Act for 50 p.c. of the provincial and municipal assistance given (see p. 306).

The provincial departments of public welfare have regulatory and supervisory powers over municipal administration of general assistance and may require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but the residence of the applicant as defined by statute determines which municipality may be financially responsible for his aid. This rule does not apply in three provinces; British Columbia and Saskatchewan have equalized municipal payments and Quebec does not require its municipalities to contribute to general assistance costs. Provinces with unorganized areas take responsibility for aid in these districts. Under the federal Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who move from one province to another. For persons without provincial residence (usually a period of one year), aid may be given by the province or the municipality and a charge-back may or may not be made to the province or municipality of residence.

The formula for provincial-municipal sharing of costs is determined by the province. In Newfoundland, general assistance is the responsibility of the province and is administered by the Department of Public Welfare. In Prince Edward Island, the Department of Welfare and Labour provides direct social assistance in rural areas and assumes 75 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages; aid to needy families where the breadwinner is suffering from tuberculosis is borne entirely by the province. In Nova Scotia, assistance is administered by the municipality, which receives reimbursement from the Department of Public Welfare for two thirds of the cost of the aid provided and one half of the cost of administration; allowances for certain disabled persons are administered by the province. In New Brunswick, the province reimburses each municipality to the extent of one dollar per capita of the population plus 70 p.c. of expenditures on general assistance in excess of that amount, and also pays 50 p.c. of the cost of administration.

In Quebec, the Department of Family and Social Welfare reimburses authorized agencies and municipal departments for the full cost of aid to persons in their own homes. It takes full responsibility for aid to persons who are unfit for work for at least 12 months, for supplementary allowances and allowances to needy widows and spinsters 60-65 years of age. The cost of aid to unemployable persons in homes for special care, including nursing homes, is borne two thirds by the province and one third by the institution. In Ontario, the Department of Public Welfare reimburses municipalities up to a prescribed maximum for 80 p.c. of their expenditures for general welfare assistance, and for 90 p.c. of expenditures for aid to persons in excess of a given proportion of the population in the municipality. Aid for rehabilitation services and aid on behalf of foster children, for which the municipalities are reimbursed 50 p.c., are excluded in these calculations. The province administers allowances to needy widows and unmarried women 60-65 years of age.

In Manitoba, the province administers aid to mentally or physically incapacitated persons whose disability is likely to last more than 90 days, and to persons unable to work because of their age. Aid to other needy persons, termed indigent relief, is the responsibility of the municipalities which are reimbursed through the provincial Department of Welfare to the extent of 40 p.c. of the costs, or at a higher rate if costs exceed a specified amount. In Saskatchewan, through the Department of Social Welfare and Rehabilitation, the province reimburses the municipalities for approximately 93 p.c. of the cost of assistance granted to needy persons. In Alberta, the province reimburses the municipalities for 80 p.c. of the value of the assistance given. The provincial Department of Public Welfare has full responsibility for allowances payable to persons who are mentally or physically handicapped for a period likely to last for more than 90 days, and to persons who because of their age are not able to be self-supporting. The Department maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile.

British Columbia, through its Department of Social Welfare, reimburses the municipalities on a pooled basis for 90 p.c. of the total cost of social assistance to needy persons. Also, the province shares equally with the municipalities expenditures on salaries of social workers; a municipality with fewer than 15,000 persons may arrange to have the Department undertake social work within the municipality and reimburse it at the rate of 60 cents per capita per year.

Subsection 3.—Services for the Aged

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. Voluntary homes generally are provincially inspected in accordance with prescribed standards and in some provinces must be licensed. Most provinces contribute to the maintenance of elderly persons in homes for the aged, either through general assistance or through statutes that relate particularly to these homes. Also, 50 p.c. of the payments on behalf of assistance cases in homes for the aged and infirm (homes for special care) are met by the Federal Government (see p. 313).

Several provinces make capital grants toward the construction of homes, and in five provinces capital grants are also available to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing.

Newfoundland maintains a home for the aged and infirm at St. John's and pays part or all of the cost of maintaining needy old people in homes for the aged and boarding homes. In 1955, a grant of 20 p.c. of costs, to be paid over a ten-year period, was made to a religious organization for the construction of a home, and provision is made for grants to similar projects under other auspices. The province is authorized by the Senior Citizens (Housing) Act, 1960 to guarantee the repayment of loans made under the National Housing Act to limited-dividend companies constructing hostels or housing for the elderly and to guarantee the cost of operating such projects. The aged and infirm in Prince Edward Island are cared for in two institutions operated by the Department of Welfare and Labour. In Nova Scotia, the aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes. The province reimburses the municipalities for two thirds of their expenditures for the maintenance of needy persons in municipal homes, subject to compliance with specified standards of care and accommodation. Homes for the aged receiving aid from the provincial government are subject to provincial inspection. Homes for the aged in New Brunswick are operated under municipal, religious, fraternal and private auspices and receive no direct financial support from the province. Voluntary and proprietary homes are subject to provincial licensing and inspection and must meet standards contained in regulations under the Health Act. Under the Social Assistance Act, 1960, the province contributes to the maintenance of needy persons in municipal homes.

Institutional care for indigent old people in Quebec is provided through charitable institutions under the Public Charities Act. The Homes for the Aged Act authorizes the province to erect and maintain homes for the aged and housing projects, or to make grants to voluntary organizations for this purpose. Standards in homes are governed by regulations under the Public Health Act.

Under the Ontario Homes for the Aged Act, municipalities must provide institutional or boarding-home care for the aged. The province contributes 50 p.c. of the costs of constructing approved homes and 70 p.c. of their net operating and maintenance costs. It also pays up to 70 p.c. of the costs of maintenance in approved boarding homes. Homes for the aged under voluntary auspices are approved, inspected and assisted under the Charitable Institutions Act, which provides for grants in aid of construction equalling 50 p.c. of costs up to \$2,500 per bed and maintenance grants of 75 p.c. of the amount spent by the organization up to \$3.40 per day for each resident. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons. In 1962, Ontario passed the Elderly Persons Social and

Recreational Centres Act, the first of its kind in Canada. This Act enables groups of interested citizens to provide social and recreational centres for elderly residents of a community. The province will meet up to 30 p.c. of the cost of constructing or buying a building for such a centre if the local municipality contributes 20 p.c.

Institutions and boarding homes for the aged and infirm in Manitoba are supervised and licensed by the Department of Health and Public Welfare under public health legislation. Under the Elderly Persons Housing Act, the province makes construction grants to municipalities and charitable organizations equalling one third of the costs of constructing or acquiring and renovating housing accommodation and homes for the aged. Grants may not exceed \$1,400 for one-person housing units, \$1,667 for two-person housing units, \$1,200 per bed for new homes for the aged, and \$700 per bed for homes that have been renovated. Under the Social Allowances Act, 1959, the province bears the entire cost of assistance to those who, because of age or incapacity, require care for more than 90 days by another or in a home for the aged.

Aged and infirm persons in Saskatchewan are cared for in four provincial nursing homes and in voluntary homes for the aged. The latter are inspected and licensed under the Housing Act. This Act also empowers the province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons; the province may also make loans to municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and maintenance grants of \$40 per bed per year may be made to municipalities, churches or charitable organizations sponsoring approved homes or housing projects. Costs of maintaining needy persons in homes for the aged are shared by the province and the municipalities under the Social Assistance Act.

Under what are termed 'master agreements', the Province of Alberta bears the cost of constructing and equipping homes for the aged and housing units on municipal land. Projects are operated by provincially incorporated foundations which include municipal councilmen in their membership; net costs of operation are borne by the municipalities. The province also meets up to 80 p.c. of the cost incurred by municipalities for the maintenance of elderly persons in housing projects and municipal or private homes. Private homes are municipally licensed.

The Province of British Columbia operates a home for elderly homeless men, a provincial infirmary for the chronically ill and, for senile and psychotic patients, three provincial homes for the aged. It also licenses and supervises homes for the aged and boarding homes and, where necessary, shares with the municipalities on a 90-10 basis the cost of maintaining needy residents. Under the Elderly Persons Housing Aid Act, the province makes grants amounting to one third of construction costs to municipalities and non-profit corporations, including religious and service organizations, engaged in building homes or low-rental housing units for elderly citizens.

Subsection 4.—Child Care and Protection

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation and are administered by a division of child welfare within the provincial department of welfare. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies, that is, to voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments; in Quebec, child welfare services are administered by recognized voluntary agencies and institutions, religious and secular. In Newfoundland, Prince Edward Island, Saskatchewan and, to a large extent, in Alberta, they are administered by the province; in the larger urban centres of Alberta there is some delegation of authority to the municipality. In Ontario and New Brunswick, a network of local children's aid societies, operating under

statutory authority, is responsible for the services. In Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province in other areas.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province—as in Alberta, Manitoba, Prince Edward Island and Newfoundland—or partly by the municipality of residence and partly by the province.

The child welfare agencies, provincial or private, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proven, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency. The appropriate agency is then responsible for making arrangements to meet the needs of the child in so far as community resources permit. The services may involve casework with families in their own homes, or care may be provided in foster boarding homes, in adoption homes or, for children who need this form of care, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 13,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and also for teen-age children who may find it easier to fit into a group setting than into a foster home. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation or by special statutes dealing with welfare institutions, and by provincial or municipal public health regulations. The institutions are generally subject to inspection and in some provinces to licensing, and are usually required to make reports to the province on the movement of children under their care. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency, or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres and chiefly under voluntary auspices. Licensing is required in five provinces but Ontario is the only province with a Day Nurseries Act. This Act sets out standards for operation and licensing and provides for provincial reimbursement of one half of the operating and maintenance costs of municipally sponsored day nurseries, which are established in most of the industrial centres in that province.

Section 4.—International Welfare

Canada plays an active role in a number of international agencies concerned with social welfare development. Notable among these is the United Nations Social Commission, which studies and reports on world social conditions, including such special aspects as levels of living, community development, social services and social defence. Canada is also a member of the Executive Board of the United Nations Children's Fund (UNICEF) which provides assistance to mothers and children in less-developed countries. Other

international agencies with welfare interests, in whose work Canada participates, include the International Labour Organization (see Index) and the International Social Security Association. Through the Colombo Plan and other bilateral aid programs, Canada provides social welfare assistance as well as other kinds of help to developing countries (see p. 155).

In addition to these activities and contributions by the Canadian Government, Canadian voluntary agencies are also active in providing aid to developing countries and participating in international discussions of welfare matters.

This work, whether governmental or voluntary, has taken on new significance in the current United Nations Development Decade, with the growing realization throughout the world that progress depends upon people as much as upon machines and materials. Having pioneering experience in many fields of social development, Canada is equipped to give special assistance in the promotion of human welfare abroad.

PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

Section 1.—Government Expenditures on Health and Social Welfare

In the seven years ended Mar. 31, 1957-63, expenditures of all levels of government on health and social welfare grew from \$2,004,000,000 to \$3,868,000,000, an increase of over 90 p.c. If these figures are adjusted to take account of the growth in population, the increase in per capita expenditures, from \$125 to \$207, was somewhat less—about 65 p.c. Government expenditures may also be measured in relation to the national accounts; on this basis, annual government expenditures on health and social welfare rose over the period under review from 9.4 p.c. to 12.5 p.c. of the national income and from 6.5 p.c. to 9.4 p.c. of the gross national product.

The federal share of health and social welfare expenditures rose from 70.0 p.c. in 1956-57 to 73.9 p.c. in 1958-59; correspondingly, provincial and municipal shares fell, respectively, from 24.8 p.c. to 22.2 p.c. and from 5.2 p.c. to 3.9 p.c. However, since 1958-59 provincial expenditures have grown more rapidly than federal expenditures mainly because of hospital insurance outlays which, although divided almost equally between federal and provincial governments, form a relatively larger part of provincial expenditures on health and social welfare than they do of corresponding federal expenditures. Thus, the federal share of government outlays on health and social welfare dropped to 69.3 p.c. in 1962-63 and the provincial share rose to 27.7 p.c., a level not reached since 1944. Municipal expenditures on health and social welfare declined steadily in percentage terms in the seven-year period, owing mainly to the introduction of hospital insurance, which relieved the municipalities of much of the cost of hospital care for indigents.

Of considerable interest is the growing proportion of government expenditures on health and social welfare taken up by health programs; in 1956-57, such programs accounted for \$470,000,000 or 23 p.c. of the total and in 1962-63 for \$1,238,000,000 or almost 32 p.c.

An outline of the principal components for 1962-63 shows the magnitude of the major programs and services—family allowances payments amounted to \$532,000,000, old age security payments to \$734,000,000, unemployment insurance benefits to \$403,000,000, veterans pensions and allowances to \$176,000,000 and \$82,000,000, respectively, and payments from the Prairie Farm Emergency Fund to \$15,000,000. These income maintenance programs were entirely the responsibility of the Federal Government. Federal-provincial income maintenance programs required expenditures of \$76,000,000 for old age assistance, \$7,000,000 for blindness allowances, \$39,000,000 for disabled persons allowances and over \$200,000,000 for unemployment assistance, the latter including some municipal expenditure. Workmen's Compensation Boards spent \$97,000,000 on cash benefits for pensions and compensation and the provincial governments spent about \$40,000,000 on mothers' allowances. Welfare services for Indians and for veterans and the national employment service accounted for \$38,000,000 at the federal level and child welfare services required an expenditure of almost \$48,000,000 by provincial governments.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled \$337,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$50,000,000. The Federal Government spent \$23,000,000 on its Indian and Northern Health Services and \$46,000,000 on hospital and treatment services for veterans. Provincial expenditures on hospital care are estimated to have totalled \$575,000,000, and \$75,000,000 was spent on other health services. Workmen's Compensation Boards paid \$40,000,000 for medical aid and hospitalization, and municipal governments spent \$70,000,000 on health.

Section 2.—Expenditures on Personal Health Care

Expenditures made on personal health care services, for the purposes of this Section, include the amounts spent by hospitals and the amounts received by physicians, dentists, pharmacists for prescription services, and by other paramedical professionals in the provision of health care and treatment directly to individuals. No attempt is made to include expenditures on public health, or public or private capital expenditures such as the building or extension of hospitals or other health facilities. Also excluded are the cost of administration of public health programs and other technical services as well as the cost of administering voluntary profit or non-profit health insurance plans. On the other hand, expenditures by the three levels of government on behalf of individuals are included.

Canadians spent an estimated \$1,804,000,000 in 1962 on personal health care, which is two and two fifths times the \$735,000,000 they spent in 1953. The annual rate of increase

during that period averaged 10.5 p.c., varying from 8.2 p.c. in 1955 to 13.6 p.c. in 1956. The per capita expenditure, which was \$49.51 in 1953, rose to \$90.71 in 1961 and an estimated \$97.12 in 1962. The population increase during the period was 25.1 p.c.

The proportion of the gross national product represented by expenditures on personal health care was 2.9 p.c. in 1953 and 4.5 p.c. in 1962. Thus, one in every \$22 of production in Canada in 1962 was for personal health care, goods and services as compared with one in every \$34 ten years previously.

2.—Expenditures on Personal Health Care, 1953-62

NOTE.—Figures exclude expenditures on public health and expenditures for capital purposes.

¹ Includes gross expenditures of public and private acute, chronic and convalescent hospitals in 1953-57 and, in non-participating provinces, in 1958-60; includes gross expenditures of budget review and contract hospitals in 1961 and 1962 and, in participating provinces, in 1958-60; excludes expenditures of mental, tuberculosis and federal hospitals.

² Includes gross expenditures of public and private hospitals; excludes expenditures of federal hospitals.

³ Includes acute, chronic, convalescent, mental and tuberculosis hospitals of the Department of National Health and Welfare and the Department of Veterans Affairs; excludes hospitals of the Department of National Defence.

⁴ Items may not add to totals because of rounding.

⁵ Sold by retail drugstores only.

⁶ Estimated.

⁷ Includes estimated expenditures for private duty nurses, chiropractors, osteopaths and optometrists; excludes all employees of hospitals.

PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274.

Voluntary Medical Insurance.—About 8,600,000 Canadians, or 47 p.c. of the population of Canada, had some protection against the costs of physicians' services at the end of 1961. This protection was provided by 64 non-profit plans with an enrolment of 5,450,000, and at least 45 private companies giving surgical coverage to 3,650,000 persons; overlapping enrolment in the two groups amounted to about 500,000. The 8,600,000 net total was 2,700,000 above the 1955 figure, which represented only 38 p.c. of the population but was 200,000 below the 1960 total of 8,800,000. The decrease no doubt reflects the increasing coverage of government hospital and medical insurance programs.

The non-profit plans took in \$127,900,000 in premiums and \$3,800,000 in other revenue in 1961, paid out \$111,700,000 in benefits and \$10,500,000 for administration, and were left with a surplus of \$9,500,000. Thus, for every dollar of premiums, 87 cents were paid

out in benefits, which amounted to \$20.51 per person covered. In 1955, benefit payments had been \$1,400,000, representing 89 cents of the premium dollar and amounting to only \$13.17 per person.

Profit-making private companies offer several classes of health protection—surgical, medical and major medical. Because surgical enrolment is the most widespread and because an individual often must take out surgical insurance to be eligible for the other kinds, the surgical enrolment figure is regarded as indicative of total private enrolment. Benefit payments in all classes amounted to \$54,700,000 in 1961, or \$14.97 per person; in 1955, the total was \$19,300,000 and the ratio \$6.25.

PART V.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation comprising the Veterans Charter and provides administration facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary-General (Canada) of the Commonwealth War Graves Commission.

The main benefits now available to veterans consist of medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and widows' pensions and war veterans allowances. The work of the Department, excepting the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England. There are seven Veterans' Land Act district offices and 25 regional offices established to administer the benefits of the Act.

The Department's continuing effort to keep alive the memory of Canada's war dead was in 1963 highlighted by the first showing of its 40-minute film, *Fields of Sacrifice*, produced by the National Film Board. This film, of Canadian war cemeteries and war memorials throughout the world and flashbacks of military engagements, was planned to show Canadians how their war dead are remembered and to reassure next-of-kin, few of whom can hope to visit these graves, that a grateful country honours and cherishes the memory of its defenders. The world premiere took place at Ottawa on Oct. 23, 1963, in the presence of Their Excellencies the Governor General and Madame Vanier; the premiere of the French version, *Champs d'honneur*, was held in Quebec City on Nov. 20; showings of both versions followed in the other provincial capitals.

Section 1.—Pensions and Allowances

Disability and Dependants Pensions

Canadian Pension Commission.—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

The Commission adjudicates on claims for injury or disease resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force in time of war or peace. The Commission may also supplement, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or may pay pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

* Prepared by the Department of Veterans Affairs, Ottawa.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities. The Pension Act has not been amended since 1961.

Disability pension is payable to former members of the Armed Forces who suffered "the loss or lessening of the power to will and to do any normal mental or physical act" as a result of military service in the Canadian Navy, Army or Air Force since the commencement of World War I. The place of residence and economic circumstances of the recipient have no bearing on the amount that may be paid, pension being payable in accordance with the degree of disability found to exist on medical examination from time to time. Similarly, pension to a widow whose husband's death was incurred on or attributable to service is not affected by her place of residence or economic situation.

The annual rates for a 100-p.c. disability for all ranks up to and including that of Colonel and equivalent are:—

	\$
Pensioner.....	2,160
Wife.....	720
One child.....	324
Two children.....	564
Each additional child.....	192

For assessments lower than 100 p.c., the awards are proportionately less. The rate of personal pension is higher if the pensioner held a rank higher than Colonel or equivalent rank at the time the disability was incurred, but the additional pension for wives and children remains the same for all ranks.

Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$1,800 depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The annual rate of pension for widows and children of all ranks up to and including that of Colonel and equivalent rank are:—

	\$
Widow.....	1,656
One child.....	648
Two children.....	1,128
Each additional child.....	384

Rates for widows are higher if the deceased veteran held a rank higher than that of Colonel or equivalent rank, but those for children remain the same for all ranks.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the World War II war effort and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

1.—Pensions in Force under the Pension Act as at Dec. 31, 1963

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability

War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Board, consisting of eight members, including a chairman and a deputy chairman, appointed by the Governor in Council, is a quasi-judicial body and is independent as far as its decisions are concerned. A detailed outline of the Board's functions and responsibilities is given in the 1961 Year Book, p. 302.

War Veterans Allowances.—The War Veterans Allowance Act provides an allowance to eligible veterans, widows and orphans who, because of age or incapacity, are unable to follow an occupation from which they may derive maintenance and ensures that their income does not fall below the stated scale. The Act came into force on Sept. 1, 1930 and has been amended 11 times, the last time in 1961. Restrictions governing income, personal property limits and real property and the monthly rates of allowances are as shown in the 1962 Year Book, p. 289. Application for an allowance must be made to the District Authority of the regional district in which the applicant resides. The functions and responsibilities of the District Authorities, of which there are 19, are described in the 1963-64 Year Book, p. 325.

During 1963, the War Veterans Allowance Board reviewed 2,332 recipients' cases comprising referrals by District Authorities, Treasury Officers and others. In addition, the Board conceded service eligibility for 540 applicants for War Veterans Allowance from allied veterans; 946 appeals were adjudicated of which 512 were disallowed, 228 allowed and the remainder deferred or withdrawn; the eligibility of certain classes of applicants for widows allowance was ruled upon, 166 of which were allowed and 36 disallowed. The District Authorities considered 12,780 applications, approving 8,933; and, to ensure continued eligibility, 80,611 recipients were either interviewed or had their financial circumstances checked. At Dec. 31, 1963, there were 81,682 recipients of War Veterans Allowances made up of 55,165 veterans, 26,232 widows and 285 orphans; 436 of the total resided outside Canada. The annual liability for all recipients was \$83,462,923.

Civilian Pensions and Allowances.—Part XI of the Civilian War Pensions and Allowances Act provides an allowance to certain civilians with service in a theatre of actual war during either World War I or World War II and to pensioners under Parts I to X of the Act. The service requirements of these civilians are outlined in the 1963-64 Year Book, p. 326. The restrictions governing income, the personal property and real property limits and the monthly rates of allowances are identical to those in the War Veterans Allowance Act shown in the 1962 Year Book, p. 289.

During 1963, the War Veterans Allowance Board reviewed 81 cases referred by District Authorities, Treasury Officers and others, dealt with 84 appeals allowing 49, and conceded service eligibility to 357 applicants. The District Authorities considered 553 applications, approving 308, interviewed 1,134 recipients in connection with continued eligibility, and checked 97 other cases. As of Dec. 31, 1963, there were 783 recipients of Civilian War Allowances comprising 625 civilians, 156 widows and two orphans; 12 recipients resided outside Canada. The annual liability for the total number was \$908,098.

Veterans' Bureau

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members

of the various auxiliary organizations, such as merchant seamen, firefighters and others, in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 33 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, most of whom are lawyers located in the departmental district offices. The pensions advocates appear as counsel for applicants before the Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on pension claims. No charge is made for the services of the Bureau.

During 1963, the Veterans' Bureau submitted 6,228 claims to the Canadian Pension Commission for adjudication. These included 1,491 claims presented to appeal boards of the Pension Commission, of which 35 p.c. were wholly or partially granted. During the year, 1,198 straight entitlement claims were submitted to the Canadian Pension Commission, based on service in World War I and peacetime, of which 130 were wholly or partially granted; claims based on service in World War II and Korea numbered 2,760, of which 1,034 were wholly or partially granted; and of the 779 miscellaneous claims submitted, 493 were wholly or partially granted.

Section 2.—Welfare Services

Federal welfare services for veterans are carried out by the Welfare Services Branch, the functions of which include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral where indicated to other public or private agencies, veterans organizations, etc.

War Service Grants.—Payments under the War Service Grants Act to veterans of World War II and the Korean War include war service gratuities now payable only in certain cases where delay of application is acceptable, and re-establishment credit for which eligible veterans may apply up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specific purposes. Up to the end of 1963, a total of \$314,671,229 had been paid out and unused balances amounted to \$9,031,028.

2.—Re-establishment Credits Paid, by Required Purpose, 1962 and 1963

Purpose	1962	1963	Purpose	1962	1963
	\$	\$		\$	\$
Homes	602,974	208,355	Business	136,193	43,434
Purchased under National Housing Act.....	2,793	93	Purchase of a business.....	333	498

Reduction of mortgage.....	12,332	5,631	Insurance, annuities, etc.....	194,210	32,038
			Special equipment for training.....	5,675	2,367
			Clothing.....	178,244	72,041
			Reimbursements.....	85,125	36,850
			Totals	1,202,421	395,085

Assistance Fund.—Supplementary assistance is available to recipients of war veterans allowances living in Canada whose incomes are lower than a stated maximum and who are in need. Such assistance is given as continuing monthly grants based on the monthly costs of shelter, fuel, food, clothing, personal care and certain health needs or as single grants to meet emergencies. The following statement summarizes activity during 1962 and 1963; as monthly grants may be continued from year to year, the number assisted in a given period is greater than the number applying.

<i>Item</i>		1962	1963
Persons assisted.....	No.	18,264	19,664
Persons applying during year.....	"	5,719	6,212
Applicants assisted.....	"	5,013	5,506
Proportion of applicants assisted.....	p.c.	88	89
Fund expenditures during year.....	\$	3,105,042	3,416,734
Proportion of expenditures given in monthly grants.....	p.c.	90	92
Persons in receipt of continuing monthly grants.....	No.	14,230	14,743

Education Assistance to Children of War Dead.—Help with the cost of post-secondary education for the children of those whose deaths have been attributed to military service is provided by the Children of War Dead (Education Assistance) Act. Assistance is confined to the cost of training in Canada at any educational institution which requires secondary school graduation, matriculation or equivalent standing for admission, including, in addition to universities and colleges, such facilities as hospital nursing schools and provincial technological institutes. From its inception in July 1953 to the end of 1962, expenditures totalled \$3,747,349 of which \$1,814,907 was spent in allowances and \$1,932,442 in fees. By the end of 1963, 1,198 children of Canada's war dead had been assisted to obtain university and other advanced education degrees and diplomas; 146 had obtained degrees in arts and science, 134 in education, 65 in engineering and applied science, 19 in social work, 12 in medicine, 11 in law, 52 in other university faculties, 296 registered nurses, 161 school teachers and 101 in administrative and technological fields. At the same date there were 759 university undergraduates and 267 students in non-university courses receiving assistance.

Returned Soldiers Insurance.—The Returned Soldiers Insurance Act (SC 1920, c. 54, as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies have been issued since Aug. 31, 1933. Of 48,319 policies issued in the amount of \$109,299,500, there were 7,557 with a value of \$16,126,704 in force at the end of 1963.

Veterans Insurance.—The Veterans Insurance Act (RSC 1952, c. 279 as amended) is the World War II counterpart of the Returned Soldiers Insurance Act and enabled veterans following discharge and widows of those who died during service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea are also eligible for this insurance. The period of eligibility to apply for this insurance ends Oct. 31, 1968. Up to Dec. 31, 1963, 52,114 policies in the amount of \$168,978,500 had been issued and 29,885 with a value of \$94,309,561 were still in force.

3.—Death Claims Intimated to Dec. 31, 1963

Year	Returned Soldiers Insurance		Veterans Insurance	
	No.	\$	No.	\$
1921-57.....	11,469	23,819,439	1,576	4,419,236
1958.....	486	902,324	254	687,145
1959.....	436	835,327	283	806,546
1960.....	462	925,255	357	1,096,010
1961.....	422	867,230	364	947,148
1962.....	435	839,709	394	1,185,463
1963.....	445	863,174	393	1,068,246

Rehabilitation and Welfare.—The Welfare Officers at Departmental District Offices collaborate closely with other branches of the Department, other government agencies at all levels and private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the impediments of increasing age. The latter are occurring more frequently, of course, as the age of the veteran population increases. Sheltered workshops are operated at Toronto and Montreal and home assembly work is provided in other centres, where the poppies and memorial wreaths and crosses associated with Remembrance Day are produced. Finished products are sold to the Dominion Command of the Royal Canadian Legion.

Section 3.—Treatment Services

Treatment Activity.—The Treatment Services Branch of the Department of Veterans Affairs provides medical, dental and prosthetic services for entitled veterans throughout Canada. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned. Prosthetic services are described in detail in the 1961 Year Book, pp. 291-292.

The primary responsibility of the Branch is to provide examination and treatment to disabled pensioners for their pensionable disabilities. Other main groups of veterans receiving treatment are war veterans allowance recipients (but not their dependants), veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of treatment. The pensioner receives treatment regardless of his place of residence but service to other veterans is available in Canada only. Where Departmental facilities are not available, treatment may be received at the expense of the Department in an outside hospital by a doctor of the veteran's choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Any necessary premiums may be paid on behalf of veterans in receipt of war veterans allowance. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Medical Staff and Training Programs.—Many of the professional staffs of Departmental active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staffs are engaged in teaching and private practice, and hold appointments on the medical faculties of the various universities. In the active treatment institutions, medical teaching programs are maintained, which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved also for advanced postgraduate training in the various specialties. An extensive intern-resident program is in effect in the medical specialties as well as in other fields such as physiotherapy, occupational therapy, dietary, psychology, laboratory and medical social services. A school for the training of nursing assistants is operated at Camp Hill Hospital in Halifax. The school has an annual capacity of 70 and graduates are offered employment in other Departmental hospitals.

Medical Research.—During 1963, there were 88 projects in progress under the clinical research program. This program is varied but in the main deals with conditions

affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver. (See also p. 279.)

Hospital Facilities.—Treatment is provided in 11 active treatment hospitals located at Halifax, N.S., Saint John, N.B., Quebec City, Montreal and Ste. Anne de Bellevue in Quebec, Toronto and London in Ontario, Winnipeg, Man., Calgary, Alta., and Vancouver and Victoria, B.C.; also in a health and occupational centre at Ottawa, Ont., and in two domiciliary care homes located at Saskatoon, Sask., and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1963 was 8,918 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. An additional 571 beds are available in veterans pavilions situated at St. John's, Nfld., Regina, Sask., and Edmonton, Alta. Pavilions are owned by the Department but are operated by the parent hospital, and medical staffs are provided by the Department.

Section 4.—Land Settlement and Home Construction

Up to the end of 1963, 235,822 applications for qualification under the Veterans' Land Act had been submitted, a number equivalent to over 22 p.c. of the Canadian veteran population of World War II. Of these, 71 p.c. were issued qualification certificates and 93,404 (almost 10 p.c. of the veteran population) were approved for financial assistance under the Act. The total amount expended was \$564,353,065, an average of over \$6,000 per veteran. Of the veterans established, 29,952 were assisted on farms, 53,153 on small holdings, 1,251 as commercial fishermen and 5,479 on federal and provincial lands. In addition, 4,038 were assisted with the construction of houses on city-size lots for an expenditure of \$35,421,983, and 1,657 Indians on Indian reservations were given grants amounting to \$3,705,210.

By the same date, 10,818 farmers, 13,717 small holders and 363 commercial fishermen had acquired title to their properties and 20,571 farmers, 20,393 small holders and 714 commercial fishermen had earned their ten-year conditional grants. Similarly, 3,997 veterans on federal and provincial lands and 1,296 Indian veterans had earned their ten-year conditional grants. The total of all grants earned amounted to \$86,310,767. Since inception, 9,318 farmers already established under the VLA, 3,377 small holders and 24 commercial fishermen had obtained additional loans.

As a result of the 1962 amendments to the VLA, operations in 1963 reached their highest level in 15 years. Although there were fewer loans made to farmers, small holders and commercial fishermen not previously established under the Act—2,970 compared with 3,219 in 1962—additional loans numbered 3,275 compared with 2,543 in the previous year and total expenditures increased to \$42,086,000 from \$33,395,000. The number of advances approved for federal and provincial land establishments and the number of approvals for home-building remained about the same—44 compared with 41, and 151 compared with 155, respectively.

General supervision is given to veteran farmers by VLA Credit Advisers, with special attention given to farmers maintaining records. A total of 884 farmers are recorded as keeping detailed farm account books and in 1963 the Farm Service Division of the VLA analysed 633 farm accounts for veteran farmers in the western provinces, covering 16 different types of enterprises or combinations of enterprises. The Ontario Agricultural College analysed 200 accounts maintained by veteran farmers in Ontario, and Truro Agricultural College analysed 51 accounts maintained by farmers in the Maritime Provinces. The Quebec Provincial Government has agreed to analyse farm account books for veteran farmers in that province.

A group contract was entered into with an insurance company in June 1963 under which the life of a veteran may, with his approval, be insured in an amount sufficient to provide for the repayment to the Director of the VLA of the amount of such indebtedness.

All veterans indebted to the Director were notified of the availability of this insurance and, by the end of the year, 2,424 had applied for insurance to cover a total indebtedness of \$14,951,500; premiums paid amounted to \$23,929 and the total paid out was \$9,300 (one death).

Since inception of the Act, construction was started on 32,943 houses—1,244 of them in 1963 compared with 1,256 in 1962. In addition, loans were made to improve 29,767 houses and farm buildings—2,934 in 1963. Recently, more of this construction has been done by private contractors and the interest in construction schools held for veterans has decreased. Enrolment in such schools since inception of the Act was 21,942; 269 were enrolled in 1963 compared with 461 in 1962.

The number of properties appraised for veteran settlement in 1963 was 4,192; since inception, 120,720 properties have been appraised.

Veterans continue to maintain a favourable record of repayment. To the end of March 1963, instalments falling due since inception amounted to \$163,000,000, of which 99.3 p.c. was paid. In addition, prepayments amounted to more than \$6,400,000, bringing the total collected to 103.2 p.c. of the amount due and owing.

4.—Summary of Settlement and Expenditures under the Veterans' Land Act, as at Dec. 31, 1963

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total
Approved for financial assistance..... No.	29,951	53,153	1,251	4,936	543	1,657	4,038	95,529
Amount of public funds expended..... \$	214,204,517	332,378,461	5,762,677	10,840,081	1,167,329	3,705,210	35,421,983	603,480,258

Section 5.—Commonwealth War Graves Commission

The Imperial War Graves Commission was incorporated on May 21, 1917 under the Royal Charter granted by His Majesty in Council on a recommendation made by the Imperial War Conference in April of that year. The name was changed by a supplemental Royal Charter on Apr. 1, 1960 to the Commonwealth War Graves Commission. The Governments of Britain, Canada, Australia, New Zealand, South Africa, India and Pakistan are members of the Commission. South Africa, after becoming a republic, requested and

obtained permission from the other Commonwealth Governments to remain a member of the Commission and is represented by an Ambassador in London. The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave. In many of the cemeteries and plots a central feature is the Cross of Sacrifice or the Great Stone of Remembrance.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, the Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay and Windward Islands.

In North America the Agency has commemorated 18,944 Commonwealth war dead in almost 3,000 cemeteries. Approximately 4,100 servicemen of both Wars, missing in operations while based in North America, are commemorated on memorials erected at Victoria, B.C., Halifax, N.S., and Ottawa, Ont. In Oakwood Cemetery, Montgomery, Alabama, the Agency has erected the only Cross of Sacrifice in the United States.

PART I.—FORMAL EDUCATION*

There is a high degree of relationship between education and standard of living—to a great extent, the general level of education shapes the nation's destiny. The amount of education given to each person in Canada has increased decade by decade until now the dream of a fair measure of education for all is almost a reality. The 1961 Census showed that of the out-of-school population, 1.7 p.c. had no schooling, 45.3 p.c. had elementary schooling, 47.0 p.c. had secondary schooling, 3.1 p.c. had some university training and 2.9 p.c. had one or more university degrees. These proportions varied from province to province; for example, the percentage with a university degree varied from 0.8 in Newfoundland and 1.5 in Prince Edward Island to 3.3 in British Columbia and 3.4 in Ontario. Improvement over the years is indicated by the fact that 3.9 p.c. of the out-of-school population aged 25 to 44 had university degrees compared with 3.4 p.c. of the population aged 45 to 54 and 2.7 p.c. of those aged 55 to 64. In the 15 to 19 age group, 1.1 p.c. reported no schooling.

The acceleration of social change during the past two decades has already had some impact on educational institutions and is disturbing the traditional functioning of the school systems. Many problems have arisen, including that of preparing experts for both old and new types of jobs. With knowledge increasing at an explosive rate and the demands of industry expanding, the possibilities for specialization at the technical, undergraduate and graduate levels are multiplying rapidly. There is a noticeable trend toward large educational organizations and mass processing of people, particularly in the metropolitan areas and at the university level. The growing use of automatically controlled mechanical-electrical communications systems, together with new data processing procedures, programmed instruction machines and related media, will soon lead to extensive changes in educational procedures. Also of immediate concern is the increase in the number of students, especially at the college and postgraduate levels, with concomitant

* Prepared in the Education Division, Dominion Bureau of Statistics.

demands for more staff and more money. Change is evident in every province but particularly so in Quebec where the school system is receiving special attention in the economic and social adjustment taking place in that province.

It should also be noted that the rural areas have presented Canada with its most insistent education problem. About 30 p.c. of the nation's population are classed as rural dwellers, some living in small communities or well organized farm districts but many others scattered over great areas, miles from town or school. During the past decade it is in the re-organization and centralization of rural education that the greatest changes have been made.

Section 1.—Administration and Organization of Education

Under the terms of the British North America Act, 1867, the provincial governments have jurisdiction over the conduct of formal education within their respective boundaries, with certain exceptions. Thus, Canada has ten provincial systems of education and, although they have much in common, no two are identical. The greatest divergencies occur in Quebec, which because of its ethnic and religious composition has a dual system comprising Roman Catholic and Protestant sectors; in Newfoundland where a somewhat loosely knit denominational organization is in operation; and in the Yukon and Northwest Territories which, because of remoteness and scattered population, have special problems. The Quebec, Newfoundland and Territorial systems are discussed under separate headings.

Each province has a Department of Education headed by a Cabinet Minister. The Deputy Minister is in each case a permanent civil servant. Under him are department heads responsible for such areas as elementary education, secondary education, teacher training, special services, education services, curriculum and research, vocational education, registration and other phases, depending on the needs of the province. Inspectors or superintendents maintain liaison between the department and the school boards and teachers. In each province, statutes known as the School Law or Laws, together with the regulations issued by the Department of Education, form the basis for school organization and administration.

Elementary and Secondary Education

Within the framework of each provincial jurisdiction, public elementary and secondary education is administered by local education authorities operating under the School Act. These school boards or boards of education are responsible for establishing and maintaining schools, employing teachers, providing pupil transportation where needed, and budgeting for the money required to operate the schools, which is raised through local taxation supplemented by certain government grants and sometimes through debenture financing. Local boards may be elected, appointed, or partly elected and partly appointed. They differ in number of members from three in most of the small rural units to five, seven or even twelve or more for urban units. Where larger units in rural areas have been established, there are central boards for the units representing the component districts, although there may be local boards retaining some custodial and advisory duties. The larger unit, replacing rural districts which were usually about four miles in extent, has been introduced by legislation in several provinces and made optional in others in an effort to provide better school facilities and greater equalization of costs and to mitigate the problems caused by a chronic shortage of teachers.

The public school system normally provides 12 or 13 years or grades, depending on the province. Common patterns for elementary and secondary levels are 8-4 or 8-5, 6-3-3 or 6-3-4, or 7-5 but the trend is toward six elementary years with six or seven years of secondary schooling. The generally accepted age of entrance to regular classes is now six years, although there has been an increased demand for kindergarten and nursery schools that has not been satisfied in many areas because of pressure for accommodation at the higher levels.

In several provinces Roman Catholic or Protestant minorities may organize separate schools under public auspices; and in all provinces religious groups, private organizations and individuals have established private schools at the elementary and secondary levels. Many of these schools, which are small in number except in Quebec, tend to place greater emphasis on character building and cultural subjects than do the public day schools. Nevertheless, in general they follow the standard curriculum fairly closely and prepare students for university or for entrance into the business world. Private schools in Quebec, most of which are operated by various orders of the Roman Catholic Church, are more numerous than in the other provinces.

In all provinces, increasing provision is being made for children who need special programs, particularly for those in the cities where numbers warrant such attention. There are in Canada six schools for the blind and eleven schools for the deaf and in a number of centres classes are held for hard-of-hearing pupils and for those with poor vision. Other physically handicapped children for whom instruction is provided include cerebral-palsied, orthopaedic, and hospitalized and home-bound tubercular and delicate children, as well as the mentally retarded and emotionally disturbed. In addition to the special assistance given to the handicapped, a limited number of classes are conducted for mentally gifted children. In some larger urban schools bright pupils are grouped into separate classes where they may be provided with an enriched program of studies; slow learners are also grouped in order that they may be given special attention suitable to their capabilities.

As might be expected, there is considerable variety in curriculum followed from province to province and, although some interest has been shown in the possibility of having a uniform program of study across Canada, there are changes being made that tend to make the curriculum more varied and more applicable to the individual needs of the students.

Parent-teacher and home and school organizations are numerous and active across Canada, working toward better schooling and giving community leadership in many areas connected with child instruction and welfare.

Newfoundland.—The education system in Newfoundland has remained much the same as it was when that province became part of Canada in 1949. The system has always been denominational in character and is a natural outgrowth of Newfoundland's social, geographical and economic situation—the result of the active leadership of the churches in the past and the fact that effective supervision from a central administration of numerous small scattered schools would have been difficult and costly. The system is mainly administered on a local basis by the five largest denominational groups—Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Mission—but includes also a limited number of common or amalgamated and community schools. However, it is controlled and financed by the provincial Department of Education, the work of which is directed by the Deputy Minister and five superintendents, each in charge of the schools of his faith. The Island is divided into educational districts for each denomination, and the local authority in each district is an appointed Board of Education, of which the local clergyman is always a member. The Boards appoint teachers, pay salaries out of government grants and look after school property. The amalgamated and community schools are administered directly by the Department. Despite their differences in administration, there is one course of study followed by all schools. Examinations are conducted and diplomas and scholarships awarded by an inter-denominational body made up of representatives of the major denominations and of the Department of Education. There is a close liaison in the field of education between Newfoundland and the Maritime Provinces.

Quebec.—Quebec's education system operates on a unique working compromise which was reached after nearly a century of struggle on the part of two cultures, both of which recognized education as fundamental to their way of life. Two distinct publicly administered systems operate under a common Act of the Legislature. About seven eighths of the population are Roman Catholic and the remainder forms the non-Roman Catholic, predominantly Protestant, system. Organization of the non-Roman Catholic schools is

similar to that in the other provinces, whereas the Roman Catholic system is patterned somewhat after the French education system and is unique in Canada. The difference in religion is accentuated by the difference in language—teaching in most Roman Catholic schools is carried out in French and in the Protestant schools, with perhaps one or two exceptions, in English. Private schools are financed and administered by private organizations and comprise schools for infants, elementary and secondary schools, classical colleges, commercial schools and institutions giving courses at university level. Public schools are maintained through local taxes supplemented by provincial subsidies and are administered by school commissions whose members are elected in accordance with the Education Act; they are free and accessible to all children of school age.

Up to and including grade 7 in the Roman Catholic public schools, classes consist of pre-school and elementary courses. The secondary program includes a general section and a scientific section, in addition to which some public schools offer a commercial section, a 12th-year special course, and a classical section. English-language Roman Catholic schools follow their own program in primary and secondary education. For the first two years at secondary level, all students are grouped in the general section and for the last two years the course is divided into general, commercial and college preparatory—the latter leading to entrance into the English-language universities. Some schools offer a 12th-year course corresponding to the first year of university. The Protestant public schools teach a seven-year primary course and a four-year secondary course, divided into three sections. Two of these sections lead to examinations for the High School Leaving Certificate with which the student may proceed to university.

Private schools, both Roman Catholic and Protestant, give education equivalent to that of the public schools. However, at the secondary level there exist the classical colleges, which are the reservoir from which the Roman Catholic universities obtain a great number of their students. Most classical colleges teach an eight-year classical course which leads to the baccalaureate degree (bachelor of arts).

There is considerable emphasis placed on special education in Quebec which includes tuition in the arts, industrial and technical studies and courses in agriculture, the latter including household science.

In Quebec, education has recently been undergoing rapid change and the trend is to provide an organization more closely resembling that in the other provinces in which there is a unified governmental authority at the provincial level. Following the recommendations of the Royal Commission of Inquiry on Education (constituted early in 1961 and issuing the first volume of its Report early in 1964), the Quebec Legislature in the Spring of 1964 passed Bill 60 providing for the creation of a new administrative structure for Quebec's education system. The Department of Youth and the Department of Public Instruction have been replaced by a Department of Education. The former Minister of Youth has been appointed Minister of Education and the former head of the Planning Bureau in the Department of Youth has been named Deputy Minister. The latter is assisted by two Associate Deputy Ministers—one for the Roman Catholic sector and the other for the Protestant sector. Also abolished by the new Act is the Council of Public Instruction (and its Catholic and Protestant Committees of 44 and 22 members, respectively), which long constituted the real authority over the separately administered Catholic and Protestant public school systems. In its stead, as a purely consultative body in education policy-making, there is being set up (July 1964) a representative body entitled the Superior Council of Education, intended to provide a channel of communication between the public and the Ministry and assist in keeping the education system in constant contact with the evolution of society.

The Yukon and Northwest Territories.—In the Yukon Territory, the school system is operated by the Territorial Government through a superintendent of schools and the Territorial civil service at Whitehorse, responsible to the Commissioner of the Yukon. It includes public schools with high school departments at Whitehorse and Dawson and public schools at such other settlements as Haines Junction, Mayo and Teslin. St. Mary's Separate School operates in Dawson as a day school and the Convent of Christ

the King in Whitehorse as a residential school. The Indian Affairs Branch of the federal Department of Citizenship and Immigration pays fees to the Yukon Government covering attendance of Indian children living near Territorial day schools, and the Education Division of the Northern Administration Branch of the Department of Northern Affairs and National Resources at Ottawa offers advice on educational policy to the Minister and Territorial authorities.

In the Northwest Territories, education is the joint responsibility of the Federal and Northwest Territorial Governments, with the former being particularly charged with responsibility for the education of Indians and Eskimos. Except within the three municipally organized school districts at Yellowknife and Hay River, the Department of Northern Affairs and National Resources (through its Education Division) operates an integrated school system on behalf of the Federal and Territorial Governments, with costs shared in proportion to the number of students enrolled. Yellowknife Public School and Separate School Districts and Hay River Separate School District are financed partly by local taxation and partly through grants-in-aid from the Federal and Northwest Territorial Governments; the Education Division provides inspection and supervisory services.

The British Columbia and Alberta education curricula, subject to increasing modifications, are prescribed for the schools of the Yukon Territory and the Northwest Territories, respectively. Marked expansion is taking place in both Territories in the provision of school accommodation and basic elementary and secondary education for all children in the Territories and for Eskimo children in northern Quebec, as well as vocational training for students and young adults showing interest and special aptitude. This program, which is an integrated one for the children of all races in the North, is being developed through construction of schools and student residences, curricula designed for a northern environment, bursaries and other student aids, and special vocational training projects appropriate to both local craftsmanship and mechanical trades in such fields as construction, transportation and mining.

Higher Education

In chartering universities, it has been the practice to leave to the universities the management of their own affairs without outside interference. But changes are taking place—universities are depending more and more on government grants, both provincial and federal, and on various research grants to carry out their special functions, and governments and industry are more aware of their dependence on the products of the universities. Also, there is greater need for co-ordinating the efforts of the universities to ensure enough places for those who seek admission, to provide additional services to the community through university-sponsored leadership, and to guarantee the universities adequate funds to meet increasing demands.

Canada has 59 universities and colleges that provide instruction and have authority to confer degrees (exclusive of those with power to confer degrees in theology only). A few of these hold some of their degree-conferring powers in abeyance, being in federation or association with another university. In addition, there are close to 300 institutions offering courses at university level. There is at least one university in each province.

The first Canadian college was the Collège des Jésuites opened in Quebec in 1635 but few others were established until after 1800. Most of the early institutions were brought into being by the churches and later others were established by provincial governments and non-denominational groups. Some of those begun under church control are now independent of both church and state.

There are now three main classes of universities—provincial, church-related and independent. In some the language of instruction is French, in some English, and in a few both French and English. They vary in size from junior colleges enrolling fewer than 25 university-grade students to multi-faculty universities with more than 10,000 full-time students and additional thousands of part-time and extension students.

Although there are variations, most students enter the university or the *cours collégial* of a *collège classique* after the completion of from eleven to thirteen years of elementary and secondary schooling. In from three to five years, courses of instruction lead to a bachelor's degree in arts, pure science, and such professional fields as engineering, business administration, agriculture, and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or licence—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years.

Most universities state their requirements for admission to first-degree courses in terms of the certificates of completion of secondary schooling issued by the department of education of the province in which they are located. As a general rule, they accept equivalent certificates from other provinces and countries as qualification for entrance. Some institutions admit students at the junior matriculation level, after eleven or twelve years of schooling, others only at the senior matriculation level, which is one year more advanced.

Growing numbers of students from abroad attend Canadian universities, in both undergraduate and graduate courses. Some are assisted by scholarship and fellowship funds provided by Canadian agencies and institutions, some by governmental or private agencies of their own countries, and many come to Canada at their own expense. Most courses are open to all who are fully qualified, although in some universities and in such faculties as law and medicine crowding has made it necessary to restrict the number of candidates accepted.

Student Aid.—The most important step forward in the field of student aid was made very recently by the passage by the Federal Government of the Canada Student Loans Act (SC 1964, c. 24), assented to July 28, 1964. This Act facilitates the making of loans to full-time students at the post-secondary level through the guaranteeing of the interest payable on loans made by the banks while the borrower continues to be a student and for a period of six months thereafter, and the guaranteeing of payment of the principal and interest after the expiration of that period. Loans may be for an amount up to \$1,000 a year for five successive years, totalling \$5,000. Thus, the student is not required to pay any interest on his loan or repay any part of the capital until six months after he has completed his studies. When he takes over the debt at that time the government stands behind him, guaranteeing his loan, moderating its cost to him and taking over in case of his death. One of the main purposes of this legislation is to make it possible for students whose university education would otherwise drag on over many years of part-time work or night courses to complete their university education more quickly and to reap its intellectual and financial benefits at an earlier age.

Previously, financial assistance in the form of scholarships, bursaries, fellowships, grants-in-aid, assistantships, and loans was available to some but not to the majority of students; this assistance was given by the Federal Government through various departments and agencies and by provincial governments, universities, business and industrial corporations, voluntary associations and professional societies.* It is not the intention of the new Act to supersede these forms of assistance, although some plans may be modified and possibly a few discontinued. But the large national plan will, no doubt, carry the main financial burden, leaving the other bodies better able to consider local conditions and the personal needs of students.

* Details may be found in the calendars of the universities; in *Awards for Graduate Study and Research* (1963 ed.) published by the Canadian Universities Foundation, Ottawa; in the *National Student Aid Information Service*, 15 Welland Ave., St. Catharines, Ont.; and in UNESCO's annual listing, *Study Abroad*.

Trade and Technical Education and Training

The introduction of more complex technology, data processing and other industrial production practices has caused widespread changes in the employment pattern, creating an employer demand for more education and training of staff members at all levels. The result has been an unprecedented expansion of technical and vocational education facilities and programs which has, in turn, stimulated a close examination of the objectives, practices, techniques, accomplishments and standards inherent in all phases of the vocational training program.

Both the concept and the scope of the services required in this field have been advancing steadily. There is general acceptance of the idea that vocational-technical education neither substitutes for nor competes with general education but forms a complementary sector of education; that man can achieve his fullest self-realization and render his greatest service through socially useful, efficient work and that modern vocational-technical education should contribute to that end from late adolescence to retirement; and that vocational education for adults as well as for youth is a public responsibility which must be provided, as needed, throughout man's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the national economy and the standard of living.

The pattern of vocational education and training in Canada varies from province to province and there are also variations within the provinces. However, there are three basic types of institutions offering vocational education—trade schools, secondary schools, and post-secondary technical institutes. Courses at the trade school level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade 8 to grade 11 or even grade 12. On the other hand, enrolment in technical institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Most of the trade schools and institutes of technology across Canada are provincially operated, but many municipal school boards provide vocational courses as part of the regular high school program in technical or composite-type schools. In addition, many private trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is done mainly on the job with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to ten weeks a year.

Recognizing the importance of a high level of occupational and technical competence in the economic development of the country, the Federal Government, through the Vocational-Technical Branch of the Department of Labour, is interested in helping the provinces maintain a balance in the development of programs at different levels—for youth preparing to enter the labour market, for the trade and other occupational training and re-training of adults (pre-employment and upgrading courses), and for advanced technical training. Under the Technical and Vocational Training Act, passed in 1960, a number of federal-provincial measures have been introduced providing federal financial assistance to enable the provinces to provide training adequate to their needs and in the national interest. These measures consist of: (1) a capital assistance program; (2) nine Technical and Vocational Training Agreements covering Technical and Vocational High School Training Program, Technician Training Program, Trade and Other Occupational Training Program, Training Program in Co-operation with Industry, Program for the Training of the Unemployed, Program for the Training of the Disabled, Program for the Training of Technical and Vocational Teachers, Training Program for Federal Departments and Agencies, and Student Aid; and (3) an Apprenticeship Training Agreement.

The capital assistance program, under which the Federal Government pays 75 p.c. of the provincial expenditure up to a specified total for each province, has given a tremendous impetus to the development of training facilities. As of Mar. 1, 1964, projects valued at over \$583,400,000 had been approved; the cost of new schools approved amounted to

\$465,400,000 and the cost of additions and alterations to existing schools was \$117,900,000. These projects will provide a total of 159,417 new student places. They are summarized by province as follows:—

<i>Province or Territory</i>	<i>New Schools</i>	<i>Major Projects Involving Additions to Existing Schools</i>	<i>Minor Projects Involving Additions to Existing Schools</i>	<i>New Student Places</i>
	No.	No.	No.	No.
Newfoundland.....	13	1	1	3,570
Prince Edward Island.....	2	—	6	1,380

Yukon Territory.....	1	—	—	144
Northwest Territories.....	—	1	—	30
TOTALS.....	292	190	90	159,417

In addition to assisting financially with the provision of physical facilities for training, the Federal Government shares in the operating costs of the various programs conducted under the Technical and Vocational Training Agreements, including the Apprenticeship Training Agreement. These programs are closely correlated with the common objectives of training the country's labour force at all levels below university and in all fields.

Of particular concern is the need to upgrade both the educational and vocational competence levels of those already in the labour force. The Federal Government undertakes to share the expenditures made by employers in developing and operating approved training programs for their employees, particularly basic training for skill development, re-training of technologically displaced persons, and apprenticeship training; higher level and other training projects are also encouraged. A Manpower Consultative Service has been established to assist industry with problems encountered in the fields of manpower training and employment and to interest itself in manpower research.

A limited survey of organized training programs for apprentices, first-line supervisors and skilled tradesmen in such fields as manufacturing, transportation and communications, mining, quarrying and oil wells, and public utilities was conducted by the Dominion Bureau of Statistics in 1963. Results revealed that almost 17 p.c. of the establishments surveyed conducted some organized training programs, with an incidence of 8 p.c. for establishments employing from 15 to 50 persons and 25 p.c. for those with 50 or more employees. Without doubt, it is more difficult for the smaller firms to arrange such courses, which perhaps can best be provided co-operatively or through day-release or other part-time classes conducted in trade and vocational schools.

Federal Involvement in Education

According to the report of the Royal Commission on Government Organization, there were, in 1960, twenty-four Federal Government departments or agencies involved in an annual expenditure on education services amounting to over \$168,000,000. Federal contributions to education include: grants under the University Grants Program administered by the Canadian Universities Foundation and based on a current rate of \$2 per head of population; assistance to students by the Department of National Defence through the Regular Officer Training Plan and the maintenance of three federal Armed Services colleges (the Royal Military College of Canada at Kingston, Ont., Royal Roads at Victoria, B.C., and Collège Militaire Royal de Saint-Jean at St. Jean, Que.); aid to veterans and to children of war dead by the Department of Veterans Affairs; awards by the National Research Council to graduate students in pure and applied science, and by the Defence Research Board for extramural research by universities; grants for the training of health workers by

the Department of National Health and Welfare; vocational training grants by the Department of Labour; language and citizenship classes administered by the Department of Citizenship and Immigration; training projects in and out of Canada under the Colombo and other external assistance plans by the External Aid Office; educational film production by the National Film Board; and the National Gallery and other awards.

A large federal contribution is made through the Canada Council. The Council, formed in 1957, was granted \$100,000,000, half of which was to be distributed to Canadian institutions of higher education over a ten-year period for specific building or equipment supply purposes, eligibility and payment to be based essentially on the scheme used for university grants. The interest on the other \$50,000,000 was to be used to assist the development of the arts, humanities and social sciences through graduate scholarships and grants to individuals and organizations in these fields (see pp. 363-365).

One of the most spectacular federal contributions to education in recent years has resulted from the passing of the Technical and Vocational Assistance Act in December 1960, by which the Federal Government agreed to contribute to each province 75 p.c. of the total amount expended by that province up to Mar. 31, 1967 on the building and equipping of vocational training facilities and also to share the cost of training technicians, vocational teachers and students in technological training programs, and the training or re-training in the classroom of unemployed persons, physically disabled persons and apprentices, etc. (see p. 335).

Another important contribution to education will be made through the Canada Student Loans Act, which was passed by the Federal Parliament on July 28, 1964. Through the provisions of this Act a full-time student at the post-secondary level will be able to secure an interest-free loan of up to \$1,000 a year for five successive years—a total of \$5,000 to be repaid commencing six months after he ceases to be a full-time student. (See also p. 334.) The total loan provision for the loan year commencing in 1964 is \$40,000,000; loan provision for subsequent years will be an amount that bears the same relationship to \$40,000,000 as the estimated number of persons in Canada aged 18-24, inclusive, bears to the estimated number of persons in Canada of the same age group in 1964.

Correspondence Courses.—The federal Department of Veterans Affairs has long been engaged in preparation and distribution of correspondence courses for veterans, Armed Services personnel and, at a later stage, for selected groups of civilians. In 1960-61, the Department offered 95 courses—12 courses at the elementary or introductory level, 32 courses at the secondary level (including senior matriculation), 16 courses in agriculture and small holdings, and other special courses.

The Department of Justice, which administers the federal penitentiaries, encourages inmates to take academic or vocational correspondence courses from the Department of Veterans Affairs and provincial Departments of Education. All Department of Veterans Affairs courses are available to the inmates and the fees are paid by the Department of Justice. During the past ten years about 40 p.c. of the inmates who enrolled in these courses have been successful.

The Civil Service Commission conducts a correspondence course in office management for civil servants who aspire to supervisory positions.

External Aid in Education.—The External Aid Office of the Department of External Affairs reported 160 Canadian school teachers overseas in 1963 under its own or other programs, such as that of the Canadian University Students Overseas Organization. About 90 of these teachers were in Africa and one third of them were engaged in teacher training. In addition, 24 Canadian university professors were at universities in developing countries, in some cases as a result of 'twinning' arrangements between a Canadian and a foreign institution. Other Canadians served abroad with the United Nations Educational, Scientific and Cultural Organization and similar international organizations.

Canada played host to about 1,000 technical trainees who were at Canadian schools and universities and in industry under the Colombo, Special Commonwealth Assistance,

and other federally sponsored or assisted plans. An additional 230 students were at Canadian universities under the Commonwealth Scholarship Plan, 83 of these arriving for the first time in Canada in September 1963. Private organizations sponsored many other students from abroad and still others came to Canada at their own expense. In all, there were probably over 8,500 students from outside Canada attending Canadian universities and colleges, from approximately 150 foreign countries and enrolled at about 150 different institutions. During the past few years, the proportion of students from outside Canada to total enrolment at Canadian universities and colleges has remained at about 6 p.c.

Education Planning

This is an age of educational growth—*quantitatively* in the shape of exploding enrolments and sky-rocketing costs and *qualitatively* in the form of changing methods and diversified courses. Accompanying deep concern about rising public investment in education, and stimulated by the shortage of skilled manpower, is a developing interest on the part of educators, sociologists and economists in the possibilities of more efficient planning of education systems to better meet the needs of the nation, the separate provinces and the individual student. Moreover, it is of interest to all that in an age of technological change, with high unemployment and heavy demand for trained skills, the educational ideal of maximum development for the individual should include preparation to adjust to changing employment opportunities.

One obvious reason why education planning is receiving special attention by such international bodies as the United Nations Educational, Scientific and Cultural Organization (UNESCO), the Organization for Economic Co-operation and Development (OECD), the International Bureau of Education (IBE) and the International Labour Office (ILO) is that it is now realized more fully that economic growth is generated at least as much by 'human' capital as by 'physical' capital. One major difference between improving physical capital and improving human capital is that the latter takes so much more time. There is a direct relationship between the demands of the labour force and the schooling provided for youth; and so the investment in education, which is now the nation's largest business, must be guided partly by manpower needs. Granted the fact that it takes at least two decades to train a senior scientist or university professor, it is clear that planning becomes a necessity, both by the individual making such an investment in education and by the various institutions contributing to this investment. At the same time, the many and rapid changes in modern technology, the increasing complexity of human knowledge, the unprecedented amount of leisure time available, and the fact that every skilled worker and tradesman will probably have to learn three or more trades during his career, all place a premium on flexibility of mind—the ability to make adjustments caused by automation and other technological advances.

Education planning is assuming an increasingly important place in Canada's educational activities. To meet requests for information, the Education Division of the Dominion Bureau of Statistics conducted a limited survey of education planning by Departments of Education, large school boards and universities during the summer of 1963; additional information was obtained on comparative studies of planning in such countries as the Union of Soviet Socialist Republics, Japan, the United States, Sweden, France, Italy, Germany, the Netherlands, Spain, Britain, New Zealand, Australia and Yugoslavia.

The DBS survey was concerned with education at all levels and with manpower needs. Only plans that extended two or more years in advance were considered as planning. The survey covered, in the main, projections of future enrolments, projections of numbers and types of schools and of school facilities, projections of numbers and types of teachers required, estimates of capital and operation expenditures, forecasts of numbers entering the labour force, and plans for relating changes in educational programs to future manpower needs.*

*DBS Report to be published in 1964.

That Canada is moving to solve some of the more pressing of the educational problems is indicated by the number of royal commissions appointed in recent years. This is one method of planning that has, in some cases, considered proposed plans and made recommendations based on special research. Its weakness is that it is not a continuous process.

The Parent Commission in Quebec laid the foundation for the passage, in May 1964, of Bill 60, which introduces a complete re-structuring of the former dual system of Quebec education. In that province there has always been great emphasis placed on fitting young people for the role they will play in society. Recently, because of change in the industrial structure of the province caused by increased automation and accelerated industrialization, members of Quebec's former Departments of Youth and Education have realized that the whole structure of education should be examined and changes made where expedient. The Parent Commission report, including the submissions made, recommends rather sweeping changes; and the report of the Committee of Studies on Technical and Professional Education relates education to manpower and provides a possible plan for some five years ahead, at which time it is expected that some balance between supply and demand will be achieved, which can then be continued through making new adjustments as conditions warrant.

In Ontario, the Robarts Plan is considered as representative of the changes being made and of the redistribution of pupils at the secondary level into several optional streams. At the same time it has been deemed desirable to establish a Curriculum Institute separate from government, with the prospect for expanding responsibility. Today's educators have a formidable task in seeking to select what to teach, especially in cumulative fields such as the natural and behavioural sciences. If this accumulation is plotted on a time line, beginning with the birth of Christ, it is estimated that the first doubling of knowledge occurred in 1750, the second in 1900, the third in 1950 and the fourth in 1960.

At the level of higher education the trend in Ontario is toward planning university education for the whole province and building the plan around existing institutions which are co-operating. To effect this there is an Advisory Committee on University Affairs made up of the Department of Education, university and outside representatives. There is also an Advisory Committee of Presidents of Provincially Assisted Universities which has prepared a report on *The Structure of Post-Secondary Education in Ontario, 1962-1970*, and a supplementary report in 1963 containing recommendations for the future organization of higher education after surveying the area and considering forecasts and suggestions from various universities. It is proposed that a Department of Higher Education be established to ensure balanced growth and to provide for adequate graduate and undergraduate education in Ontario.

Progress in New Brunswick is being made pursuant to the report of the Royal Commission on Higher Education in New Brunswick published in 1962. The report recommended that the institutional framework for higher education be modified to ensure that adequate institutions be provided for both English-language and French-language students at the undergraduate and graduate levels. It dealt with questions of finance, of controlling the establishment of new universities, of priority for programs and the continuance of grants to some institutions in other provinces (in connection with enrolment of New Brunswick students outside their home province), scholarships, bursaries and related problems.

In British Columbia, elementary-secondary education has been influenced by the Chant Commission report, and the report *Higher Education in British Columbia and a Plan for the Future*, by Dr. John B. Macdonald, President of the University of British Columbia, published in 1962. It is interesting to note that, whereas the problem in New Brunswick was essentially that of consolidating many relatively small institutions, in British Columbia it was a matter of changing from a policy of having one centralized university with a branch, to establishing additional universities to meet present and future needs.

These are but a few of the major changes undertaken across Canada; in fact, planning bodies are to be found at all levels and the degree of sophistication is increasing both in the collection of data and complexity of methods and in co-operation with other planning bodies.

Section 2.—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as publicly controlled, privately controlled, or federal. Municipal schools, most numerous by far, include elementary and secondary (or high) schools. Provincial schools include vocational institutes, trade schools, teacher-training colleges, and schools for the blind and deaf. Private schools may be academic, business (commercial), trade schools or correspondence schools (which are chiefly trade or commercial). Correspondence courses are also available through the various provincial Departments of Education. Federal schools include schools for Indians, schools for residents of the Northwest Territories, and overseas schools for children of members of the Armed Forces or for Armed Forces personnel.

Institutions of higher education may be provincially controlled, church controlled, independent or federal military colleges. In addition to universities and colleges, there are institutes of technology, theological institutions, and schools for such specialized fields as nursing, agriculture, fisheries, fine arts, chiropractic, religious education, and other types. Some of these are provincial, some private.

Continuing or adult education takes a variety of forms and reaches all levels from the basic English courses provided for newly arrived immigrants to courses of university level. Most organized classes for adults operate under the auspices of universities, colleges, local school boards, churches or other community organizations.

Table 1 shows full-time enrolment at all levels each year for the period 1954-55 to 1963-64 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1962-63. In all types of schools the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

¹ Day, residential and hospital schools administered by the Federal Government.

² Also included

with "Higher Education". ³ Includes indentured apprentices taking full-time, part-time and correspondence courses.

⁴ Included under "Trade courses (pre-employment)".

⁵ Included with Nova Scotia.

⁶ School year 1961-62.

⁷ Includes only students being trained under federal-provincial agreements.

⁸ Includes enrolment in courses sponsored by public libraries, business colleges, teacher-training institutions, and Federal Government departments not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1960 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1958-60 are given at p. 347 and financial statistics for universities and colleges at pp. 351-352.

¹ Includes the Yukon and Northwest Territories. ² No direct grants were paid to universities of Quebec; see text on p. 351. ³ Capital grants from the Federal Government are included in the appropriate classification above. ⁴ Limited to reported expenditures of public funds. ⁵ Included in "Elementary and Secondary—Public schools". ⁶ Includes capital costs from current funds.

Subsection 1.—Elementary and Secondary Schools

Control.—Direct control and operation of public schools is by school boards, which operate under school laws and regulations. Through amalgamations and consolidations, schools are now operated by boards of larger units, local boards within larger units, independent boards for rural schools, towns or cities, and some by official trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active public school boards in each province in the school year ended in 1963 and indicates the type of board, the number of official trustees and the number of board members elected or appointed to these boards.

4.—Active School Boards and School Trustees, by Province, School Year 1962-63

are under an official trustee or trustees.

² In addition, 12 school districts

Enrolment.—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 4 p.c. of the total 1962-63 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 1 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Annual rates of increase in total school enrolment for the four most recent years ranged from 3.8 p.c. to 4.9 p.c.; the country's population during the same period increased annually by amounts varying from 1.8 p.c. to 2.2 p.c.

¹ Includes Ungava District of Quebec.² Total for Yukon Territory was 3,104 pupils.

Teaching Staffs.—Between the school years ended in 1943 and 1963 the number of teachers in the publicly controlled schools of the ten provinces increased 128 p.c. from 75,321 to 171,927. The number of men teachers increased 241 p.c. and the number of women teachers 99 p.c.

In 1963, in nine provinces (excluding Quebec), 83 p.c. of the teachers had at least senior matriculation and one year of teacher-training, and an additional 9.5 p.c. had one year less schooling. Median experience in the eight provinces outside of Quebec and Ontario has increased slowly from 6.8 years in 1943 to 8.3 years in 1963, despite the large number of new teachers each year. Many of these have been recruited by the cities, while the median experience has declined from a high of 16.7 years in 1946 to 13.4 in 1954 and 9.3 years in 1963.

Between 1943 and 1963 the median salaries of all teachers in the nine provinces other than Quebec increased by 321 p.c. from \$1,075 to \$4,522, while that for teachers in one-room schools increased by 250 p.c. from \$853 to \$2,983. The annual rate of increase has naturally fluctuated considerably, ranging from 1.8 p.c. in 1941 to 16.8 p.c. in 1948. The increase in 1963 over 1962 was 2.4 p.c. as compared with 3.9 p.c. for 1962 over 1961.

¹ Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training.

² Comprises teachers and principals instructing or supervising kindergarten and elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial *Report of the Minister, 1962*.

³ Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial *Report of the Minister, 1962*.

Financial Support.—Table 7 shows details of the income of public school boards for the years 1958-60. In most provinces, local taxation is the most important source of revenue followed by provincial government grants. In 1960, all other sources of income accounted for less than 3 p.c. of total current revenue. Newfoundland differs significantly

from other provinces in its method of school finance. Local taxation is non-existent outside of four School Tax Authorities and provincial grants are the major source of income with other sources accounting for 12 p.c. of current revenue.

Usually school boards requisition the local municipalities for the sums needed to balance their budgets after taking account of provincial grants and other income. Exceptions to this rule are mostly in areas where there is no municipal organization and where the school boards assess and levy taxes themselves. School taxes are levied on land and buildings and, in some cases, on improvements and personal property. Several provinces have taken steps to equalize real property assessment.

Only four provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

7.—Income of School Boards of Publicly Controlled Elementary and Secondary Schools, by Province, Years Ended Mar. 31, 1958-60

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

Subsection 2.—Universities and Colleges

Institutions.—According to the latest information available at the time of going to press, there were in Canada 354 institutions of higher education offering one or more years of degree-credit courses—304 under the control of religious bodies (264 Roman Catholic), 23 under provincial government control, three under Federal Government control, and 24 under private non-denominational control. These institutions were distributed by province as follows:—

Province	Active Degree- Granting Institutions	Other Institutions	Total
	No.	No.	No.
Newfoundland.....	1	2	3
Prince Edward Island.....	1	1	2
Nova Scotia.....	9	7	16
New Brunswick.....	6	4	10

Ontario.....	21	44	65
Manitoba.....	3	7	10
Saskatchewan.....	5	12	17
Alberta.....	2	9	11
British Columbia.....	3	5	8
TOTALS.....	59	295	354

Enrolment.—Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well be double the 1963-64 figure of 158,270 in about ten years. Table 8 shows full-time enrolment by province for the academic years ended 1961-64. In the latest year, in addition to full-time students, there were about 50,000 part-time university-grade students (including about 6,000 graduate students) in attendance during the regular 1963-64 winter session and nearly 7,000 students taking university-grade credit correspondence courses.

¹ All theology enrolment included as undergraduate prior to 1962-63.

Foreign enrolment has risen considerably during the past decade, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1962-63 about one of every 16 full-time university students in Canada was a resident of a country other than Canada. Hong Kong, Trinidad and Tobago, and Britain each accounted for over 500 students while France, Pakistan, India and Jamaica contributed from 100 to 400 each. About 150 other countries or territories were represented in the figures.

¹ Includes 13 ungraded professors not distributed above.

Finances.—Table 13 gives a ten-year series of the finances of Canadian universities. Since 1952 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52, the Federal Government has provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-59 and to \$2.00 in 1962-63. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation, which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provides its own grants and is reimbursed by an abatement of corporation tax. Table 14 gives details of the federal grants for each of the academic years ended 1962-64.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000, to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1963, a total of over \$30,000,000 had been paid. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment.

The Canada Council was also endowed with an additional \$50,000,000, the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see also pp. 363-365).

13.—Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1952-61

NOTE.—In 1952 and 1953, institutions included represent about 80 p.c. of the total full-time university-grade enrolment. For subsequent years figures given are an estimate of the total current revenue and expenditure of universities and colleges.

Subsection 3.—Vocational Education

Table 15 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to two-year vocational high school courses or three-year post-secondary courses offered in provincial technical institutes. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or a technical institute.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

² In addition, there were 10,961 part-time students and 357 students taking correspondence courses.

³ Excludes 12,771 part-time students and 31,758 students taking correspondence courses from private trade schools and business schools.

⁴ Excludes some 21,000 part-time students.

Subsection 4.—Adult Education

Universities and colleges, federal, provincial and municipal governments, and a wide variety of private schools and organizations provide for adult education activities in Canada and a number of national voluntary organizations assist in co-ordinating these efforts, the most important being the Canadian Association for Adult Education and l'Association canadienne de l'éducation des adultes.

Annual DBS surveys from 1957-58 to 1961-62 show pronounced increases in enrolment in courses for credit toward a high school diploma or a university degree, and substantial enrolments in vocational adult courses. Enrolments in courses on social and other cultural subjects did not increase as rapidly but each year account for important portions of the total enrolment.

In 1961-62, 88 universities and colleges reported a total course enrolment of 207,189, of whom 47.9 p.c. were working for credit toward a university degree, and 22.4 p.c. were in professional training and refresher courses. Informal study included community development groups, fine arts, literature and language classes, current events study groups and marriage preparation courses. Federal and provincial government departments conducted or assisted municipal boards to conduct courses with a total enrolment of 744,482, of whom 15.7 p.c. took academic subjects for credit toward a high school diploma, and 37.7 p.c. vocational courses. Government agencies also sponsored public health courses, language and citizenship classes for new Canadians, French-English conversation groups, leadership training, and fine arts courses. Other sponsors who reported, as indicated in Table 16, brought the total enrolment to more than 1,000,000, or one of every 12 persons 15 years of age or over in the population as of June 1962.

In addition to organized classes and courses, sponsors of adult education arranged public lectures, film showings, exhibits, performances and similar activities, which drew a total attendance of 3,293,678. Institutions and agencies offering programs of adult education prepared television and radio programs, information materials, and exhibits for fairs and conferences. The National Film Board and Canadian Broadcasting Corporation co-operated with other sponsors in the production of program materials and the staffs of adult education agencies provided consultative services to organizations and individuals.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—The Arts and Education*

Fine Art Schools, Galleries and Organizations.—Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. In Mount Allison University, McGill University, Sir George Williams University, Queen's University, McMaster University, Assumption University and the Universities of Manitoba, Saskatchewan, Alberta and British Columbia, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto an Honour Bachelor degree in art history and archaeology is offered, and a Master degree in architecture may be obtained at McGill University and at the Universities of Toronto, Manitoba and British Columbia.

There are many schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.
 École des Beaux-Arts, Quebec, Que.
 École des Beaux-Arts, Montreal, Que.
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, [Que.
 Ontario College of Art, Toronto, Ont.
 University of Manitoba School of Fine Arts, Winnipeg, Man.
 School of Art, Regina College, Regina, Sask.
 Provincial Institute of Technology and Art, Banff School of Fine Arts, Banff, Alta.
 (affiliated with the University of Alberta, Edmonton)
 Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups; such courses are listed in *Some Summer Courses in the Arts in Canada* published by the Canadian Cultural Information Centre.*

* Further information on this subject may be obtained from the Canadian Cultural Information Centre, 56 Sparks St., Ottawa.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Art Institute of Ontario and the Queen's Art Circuit have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature. It is the third largest circulating agency in North America. The principal art galleries are:—

Beaverbrook Art Gallery, Fredericton, N.B.
 Montreal Museum of Fine Arts, Montreal, Que.
 National Gallery of Canada, Ottawa, Ont.
 Public Library and Art Museum, London, Ont.
 Art Gallery of Toronto, Toronto, Ont.
 Art Gallery of Hamilton, Hamilton, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Norman Mackenzie Art Gallery, Regina, Sask.
 Edmonton Art Gallery, Edmonton, Alta.
 Calgary Allied Arts Centre, Calgary, Alta.
 Vancouver Art Gallery, Vancouver, B.C.
 Art Gallery of Greater Victoria, Victoria, B.C.

Other Fine Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers
 Canadian Arts Council
 Canadian Group of Painters
 Canadian Guild of Potters
 Canadian Handicrafts Guild
 Canadian Museums Association
 Canadian Society of Graphic Art
 Canadian Society of Painter-Etchers and Engravers
 Canadian Society of Painters in Water Colour
 Canadian Society of Landscape Architects and Townplanners
 Community Planning Association of Canada
 Federation of Canadian Artists
 Federation of Canadian Woodcarvers
 Royal Canadian Academy of Arts
 Royal Architectural Institute of Canada
 Sculptors' Society of Canada
 Town Planning Institute of Canada.

The National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. The group of pictures that formed the nucleus of the collection was selected by the Marquis. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and was placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under such management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Secretary of State. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually.

In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—and, for the first time, the Gallery had adequate well-lighted space for hanging its permanent works of art and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their national tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections of Old Masters include twelve important works acquired from the Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items.

The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects; the operation of an Exhibition Extension Service which prepares and circulates travelling exhibitions, provides educational services such as lectures offered to the general public across Canada, and organizes guided tours for visitors to the Gallery at Ottawa; the production of publications, films, reproductions, didactic exhibitions and other aids to art appreciation; and assistance to Canadian artists participating in important international exhibitions such as the Biennials held in Paris, Venice and São Paulo. The Conservation and Scientific Research Division of the Gallery, which had been handling requests for technical information on works of art from public and private collections across Canada, was in 1964 renamed the National Conservation Research Laboratory in recognition of its expanding services to the country as a whole. The major function of this section is the conservation of the national art collection by the application of the highest international standards. Studies are conducted on the effects of environment on works of art, the durability of artists' materials and the scientific identification of artistic techniques. The services of the Laboratory are offered to government departments and art museums and are to be extended in the near future.

Performing Arts Schools.—Music, the most widespread of the performing arts (which also include opera, drama, and ballet and dance) is a degree course in a number of universities. The University of Toronto offers a Doctorate and a Master degree in music; a Bachelor degree or Licentiate in music may be obtained at Acadia University, Laval University, McGill University, Mount St. Vincent University, St. Joseph's University, St. Louis University and the Universities of Montreal, Toronto, Manitoba, Alberta and British Columbia; and a Bachelor degree with specialization in music may be obtained at Mount Allison University, St. Francis Xavier University, Queen's University and the Universities of Sherbrooke, Western Ontario and Saskatchewan. Advanced instruction is also given at the Brandon College School of Music, the Advanced School of Contemporary Music, Toronto, the Institute of Music and Dramatic Art, Montreal, and the Banff School of Fine Arts. The Royal Conservatory of Opera School, Faculty of Music of the University of Toronto, trains students in all phases of operatic production, and summer courses are held at Banff and the University of British Columbia.

A Bachelor degree with specialization in drama may be obtained at the Universities of British Columbia, Alberta and Saskatchewan and at Queen's University, and advanced instruction is given at the Banff School of Fine Arts. The Manitoba Theatre School, the Medhurst Theatre School, Toronto, the National Theatre School of Canada, Montreal, and the New Play Society Theatre School, Toronto, are also of importance in this field. The ballet and dance schools of national importance are the National Ballet School, Toronto,

Les Grands Ballets Canadiens, Montreal, the Canadian School of Ballet, Winnipeg and the Okanagan Valley, the Banff Summer School and the University of British Columbia Summer School.

Section 2.—Museums and Education

Modern museums, in Canada and elsewhere, are breaking away from the old concept of being mere repositories and are assuming an important role as educational and cultural centres. They have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. Canadian museums of history and science offer many educational services to the public through exhibits, guided tours, lectures, and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.
 McGill University Museums, Montreal, Que.
 National Museum of Canada, Ottawa, Ont.
 Royal Ontario Museum, Toronto, Ont.
 Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
 Museum of the Province of Quebec, Quebec, Que.
 The Manitoba Museum, Winnipeg, Man.
 Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs and field excursions.

For adults, museums offer lectures, film showings, and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations, and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have had regular radio or television programs; and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

The National Museum of Canada.*—The National Museum originated in the Geological Survey of Canada and its early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the Government to carry out a geological survey. As a result a resolution was passed in the Estimates on Sept. 10, to defray the expenses of a Geological Survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museum. Logan was much more than a mere geologist and his interests extended to other branches of natural science. His

* Prepared by Dr. R. Glover, Director, Human History Branch, and Dr. A. W. F. Banfield, Director, Natural History Branch, National Museum of Canada, Ottawa.

diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose."

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856, Elkanah Billings, a palaeontologist, was added to the staff, the first of a number of specialists, and the legislation passed that year to continue the work of the Geological Survey specified the establishment of a geological museum, open to the public, to exhibit specimens, books and instruments.

In 1874, the practice of recording the number of visitors to the Museum was commenced; from May 1874 to April 1875, the number of visitors was 1,017 and by the year ended April 1896 it had reached 31,595. In 1874, the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized Museum lecture program was undertaken in 1912, with a series of lectures for young people after school; by 1915, Saturday morning lectures for children and evening lectures for adults—both features of the Museum program today—were in operation.

The scope of the Museum was enlarged in the "Act to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the Museum in connection therewith", of Apr. 28, 1877. In that Act the Survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary materials for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856, the Geological Survey of Canada had been authorized "from time to time" to distribute publications relative to the Survey. From this authority developed the Museum's celebrated series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the Museum on a continuing basis and permitted the appointment of specialists in connection with natural history research. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third Director of the Geological Survey, George M. Dawson, the Museum entered the field of Canadian anthropology.

Prior to 1880, the Museum occupied several buildings in Montreal but that year the Geological Survey moved to Ottawa, occupying the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and the Geological Survey moved in in 1910. The Museum began an expanded program of research and exhibition under the direction of R. W. Brock, then Director of the Geological Survey of Canada. Unfortunately this program was curtailed during World War I because the burning of the Parliament Buildings, in 1916, forced Parliament to occupy the Museum building until 1919. Later, expansion of the exhibition halls was handicapped by the Museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada.

However, in 1927, the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada". In 1950, the National Museum of Canada was transferred to the Department of Resources and Development (now the Department of Northern Affairs and National Resources) and in 1964 it was transferred to the Department of the Secretary of State. Since the end of the Second World War, particularly after the appointment of Dr. Frederick J. Alcock as Chief Curator, the Museum has increased its research, education and exhibition staff in order to play a more important role in the cultural life of Canada and perform the tasks properly assigned to the National Museum of Canada.

The responsibilities of a great museum include the collection, preservation, storage and study of objects related to the various disciplines that fall under its purview. The next step is the undertaking of research by specialists in those fields and the publication of their findings to increase the total knowledge of their subjects. Typically, museums exhibit items from their collections as intrinsically beautiful displays and also to teach the public the scientific background to the subject. This leads to the educational program of museums which usually includes lectures, workshops, guided tours for children and activity groups, travelling exhibits, loans, library service, and radio and television programs.

The National Museum of Canada is now organized to present all these facets for the enjoyment and education of the people of Canada. It is divided into two Branches—the Human History Branch and the Natural History Branch. The Human History Branch contains the divisions of Archaeology, Ethnology and Folklore, and a recently organized History division. Under the Natural History Branch are the divisions of Zoology, the National Herbarium, and Geology and Palaeontology. Services common to both Branches are concerned with exhibitions, education and technical and administrative functions. The total staff in 1963-64 was 137 persons including 32 professional and administrative personnel, 66 technical and operational personnel and 39 prevailing rate and part-time assistants.

The 1964 field research program in natural history included 12 expeditions to various parts of Canada. Their work included the collection of mammals from the southern Prairie Provinces and northern Yukon Territory, birds from the exterior of British Columbia, fishes from the Queen Elizabeth Archipelago, reptiles and amphibians from Nova Scotia and Manitoba, and a study of the molluscs of the Hudson Bay drainage and marine invertebrates of southwestern British Columbia. Botanical expeditions were sent to northern Ontario and Quebec, southern British Columbia and the Niagara peninsula of southern Ontario. In addition, special investigations of Canadian invertebrate groups were sponsored at various Canadian universities.

The past five years have seen a marked growth in the research carried out by the Human History Branch. Much of this has been done under contract by scholars whose work is wholly or partly financed by the Museum, on the understanding that the Museum shall receive their collections and the right to publish their reports. This system has proved valuable in forging links between the National Museum and universities or other museums, and in developing archaeology and ethnology in Canada as well as in enriching the national collection and the museum's publications. The work in archaeology has covered such subjects as Dorset and pre-Dorset cultures in the Arctic, early occupation of Yukon Territory and British Columbia, and archaeology on the prairies, in western and central Ontario and in the Maritimes. Many demands have been made on the Museum to assist or perform "salvage archaeology" in areas where new hydro developments or road-building mean that archaeological work must be done immediately or never. Ethnological research has included folklore studies and the collection of folk music in many parts of Canada as well as the study of Indians and Eskimos.

The exhibition program in 1963-64 included the completion of the Hall of Canadian Mammals and the renovation of the exhibits of small mammals and the Hall of Birds. Plans were laid for the exhibition halls to be built for the new National Museum Building to be opened on July 1, 1967. The educational program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature study club, the school loan collection, children's classes, guided tours, and the Canadian collection of nature photographs.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational and semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation's radio and television facilities. Whether these programs are directed to children or adults, entertainment is combined with information

whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests.

Programs of an adult education nature are presented frequently by the CBC English Networks, and co-operation in program planning is received from various educational organizations. The CBC is an active participant in the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Citizens' Forum, a series broadcast on radio and television for many years by the CBC, uses discussions, public debates and small seminars to describe important issues of the day. *Citizens' Forum*, or *The Sixties* as it is known on television, is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Place publique*, is planned in co-operation with l'Association canadienne de l'éducation des adultes. Similar types of broadcasts are prepared specially for rural listeners under *National Farm Radio Forum* which is arranged by the CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. This unique educational program involves listening groups who continue the discussion of the topic at the conclusion of the program and funnel their opinions to provincial and national centres for use and distribution. Other daily service and educational programs are provided for farmers. *Country Calendar* and *Country-time* are weekly half-hour television programs of a service and educational nature designed to keep farmers and the general public in tune with agricultural conditions and developments. *Le réveil rural* on radio and *Les travaux et les jours* on television are French-language counterparts of the English farm programs.

In addition to *Citizens' Forum*, regular television programs are *CBC Newsmagazine* and *Document*, both of which present weekly half-hour interview and documentary programs. *Caméra '64* on the French television network reports on national and international events and actualities. A series of English television documentaries and dramatizations, entitled *Explorations*, examines questions in the fields of sociology and history. Special programs on the Winter Conference of the Canadian Institute on Public Affairs are also broadcast. This three-day weekend conference examines sociological questions in open meetings and group discussions.

For a little more than a decade, the summer evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other radio programs of an educational nature are *Science Review*, which focuses on important discoveries in the field of the natural sciences and their branches, and *L'Université radiophonique internationale*, a French network series of talks exchanged with other countries on cultural and scientific subjects.

The French network series, *Les Chansons de la maison* offers programs relating to parents and children, and general questions sent in by parents are answered by psychologists. For women listeners, the daytime program *Fémina* is presented five times a week. The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy under the auspices of *Le Service des émissions éducatives et d'affaires publiques*.

Take Thirty, a new week-day television show for women, has a different 'flavour' on each program—entertainment and interviews of performers; travel topics and features on events in Canada and abroad; cooking, child care and household management; discussions on social problems; and interviews with men and women from the sporting world. The closest radio counterpart of *Take Thirty* is *Trans-Canada Matinee*.

In addition to its school and pre-school broadcasts and other entertaining and informative children's programs on radio and television, the CBC has given time to higher education through co-operation with universities in Toronto, Montreal and Ottawa to broadcast television series locally under the title *Live and Learn*. These programs have been designed to give a general appreciation of academic subjects such as physics, chemistry, literature

and psychology. Experimentally, the University of Toronto and the CBC have produced *Beginning Russian*, through which viewers could prepare themselves for university course credits; other experiments in the production of courses for university credits are in progress in Montreal. CBC Radio's *University of the Air* presents lectures by professors distinguished in their particular fields.

English network radio and television schedules of the CBC have always reflected the many facets of Canadian culture, the basic principles of a national broadcasting service in this country being that a national service must be a complete service for all sections of the population, link all parts of the country, be Canadian in content and character, and serve the two main language groups and the various geographical regions.

As the centenary of Confederation draws near, the CBC has taken steps to share in celebrating the occasion in 1967. During the past two years, there has been an increase in the number of CBC programs devoted to Canadian ideals and heritage. Special programs have been produced for radio and television covering all phases of Canadian history, bringing, through dramatic documentary productions, the story of Canada to Canadians from coast to coast. Radio and television profiles of Canada's political leaders have given new life to the pages of the country's history and future programming plans include co-operation with the National Film Board in producing many more dramatic documentaries and biographies over the next few years. A start has been made on an oral-history project for which outstanding Canadians in many walks of life are presenting personal reminiscences on audiotape and film for future use.

Effective Oct. 1, 1964, *The Learning Stage*, which deals with literature, sociology, science, music, labour relations, philosophy, ecology, creative processes, theatre, arts, ethics, political science and French, will be broadcast on CJBC Monday to Friday. This is the only English program to be presented on the French-language CBC station in Toronto. In 1964, the CBC and the French-language National Catholic Office for Mass Media launched its third annual six-week program to prepare non-professional specialists in educational television and radio. The program was expanded to include, in addition to specialized producers and script writers as in previous years, trained teachers who can make the best use of the programs thus produced. There were 30 'students' in the group, including 13 priests, two nuns, two brothers and 13 women and men college and primary teachers; the 30 were delegated from all over the Province of Quebec.

Section 4.—The Educational and Cultural Functions of the National Film Board

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board produces and distributes filmstrips and still photographs on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16mm. community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian

schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

A substantial proportion of the Board's production and distribution program is concerned initially with television at home and abroad. Series of original films are shown regularly over English-language and French-language networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, Paris in France, New York, Chicago and San Francisco in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 5.—The Canada Council

As a result of recommendations made by the Royal Commission on National Development in the Arts, Letters and Sciences, appointed in 1949, the Canada Council was established in 1957 to promote the study and the enjoyment of, and the production of works in the arts, humanities and social sciences. A sum of \$100,000,000 from the public treasury was granted to the Council, one half of which was placed in a University Capital Grants Fund to assist institutions of higher learning to expand their building facilities in the arts, humanities and social sciences, and the remainder set up as an Endowment Fund, the current annual income from which is approximately \$3,100,000.

The Council is made up of 19 members appointed by the Governor in Council for terms of three years, plus a chairman and a vice-chairman who are selected for five-year terms. Members are ineligible for reappointment during the 12 months following their second consecutive term on the Council. The organization must meet at least three times a year to consider applications made to it by organizations and individuals across the country. The day-to-day administrative work is carried out by a permanent staff in Ottawa.

University Capital Grants Fund.—One of the principal responsibilities of the Council is toward Canada's institutions of higher education. The Fund enables the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects in connection with the arts, humanities and social sciences, with the following limitations: (1) a grant for any one project may not exceed one half the total expenditure made in respect of that project; (2) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion

to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. By Mar. 31, 1964 more than \$54,160,000 had been authorized for payment by the Council and 75 institutions had drawn upon the Fund for a wide variety of buildings. Libraries, classrooms and residences claimed the major share.

Aid to Individuals.—Because in 1957 less than 10 p.c. of the graduate fellowships available in Canada were for studies in the humanities and social sciences, the Canada Council allocated over \$1,000,000 from the income of the Endowment Fund to the establishment of a scholarship and fellowship program to assist in meeting the rapidly growing needs of the future for university teachers. In seven years, more than 3,000 scholars have been aided through awards at the master's, doctorate and postdoctorate level. As a further stimulus to academic pursuits, grants are made to universities to enable them to bring outstanding lecturers to their campuses and travel grants are awarded to permit Canadians to attend international conferences and thus maintain contact with scholars from other countries.

Individual assistance is also given in the arts. In seven years more than 950 scholarships have been awarded to enable singers, dancers, painters, writers and other performing and creative artists to continue their studies or perfect their arts. Other artists had benefited from the Council's program of commissioning grants; such grants enable theatres, orchestras, soloists, art galleries or museums to commission and perform or display original works by Canadian artists.

Aid to Organizations.—A large proportion of the revenue from the Endowment Fund is devoted to a program of assistance to organizations in the arts and letters. Since income from this source is limited, the Council seeks to support the best talent possible, which involves a large investment in some of the major population centres and at the same time covers other areas of the country. This it does by combining grants for excellent service in local or regional areas with awards to enable organizations to travel to more remote parts of the country where the arts are less readily available. It also seeks to ensure local support by insisting that organizations receiving grants find additional revenue from other sources. In the year ended Mar. 31, 1964, the Council gave about \$1,440,000 to organizations in the arts, humanities and social sciences. Of this sum, \$1,104,000 went to arts organizations—about \$357,000 to music, \$109,000 for festivals, \$528,000 for opera, theatre and ballet, \$68,000 for the visual arts and \$35,000 for art publications. There were both large and small grants, and groups assisted ranged from the National Ballet of Canada (\$86,500), the Montreal Symphony Orchestra (\$45,500), the Canadian Opera Company (\$76,500) and the Stratford Shakespearean Festival (\$45,000) to Le Théâtre Universitaire Canadien (\$5,000), the London Public Library and Art Museum (\$2,000) and the periodical *The Fiddlehead* (\$500). These sums covered a variety of purposes, from regular seasonal programs to cross-Canada tours and the commissioning of new works.

Considerably less assistance went to organizations in the humanities and social sciences since the bulk of the scholarship program is directed toward these subjects. Aid was given to visiting lecturers, to publications and to several academic projects. Altogether, \$336,000 was given for these purposes.

UNESCO.—The Act establishing the Canada Council also provided that the organization should undertake certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council accordingly established a National Commission for UNESCO with 30 members and approximately 48 organizations with "co-operating body status", and also provided the secretariat for the Commission. With the assistance of the National Commission, the Council is responsible for the co-ordination of UNESCO program activities in Canada, for Canadian participation in UNESCO program activities abroad, and for proposals for future UNESCO programs. In all these matters the Council works in close association with the Department of External Affairs and serves

as the normal channel of communication between the Department and the Commission. In the year ended Mar. 31, 1964, the Council spent approximately \$100,000 in respect to the National Commission.

Section 6.—Library Services

The National Library.—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council, consisting of the National Librarian, who serves as Chairman, the Parliamentary Librarian, and twelve appointed members, at least one of whom must be from each of the ten provinces.

By 1963, although the Library was still housed in temporary quarters and only a limited purchasing program could be undertaken, the book collection consisted of about 250,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Under the terms of the Copyright Act and the Library's own Book Deposit Regulations, 6,903 titles were received in the year ended Mar. 31, 1964, 4,244 of which were related in some direct way to Canada.

Canadiana, the Library's monthly catalogue of new books and pamphlets relating to Canada, described over 12,000 items in 1963; these included trade and general publications, and official publications of the federal and provincial governments. *Canadiana* has been published since 1950 and is cumulated annually; a cumulated index is in preparation.*

The National Union Catalogue lists over 8,000,000 volumes in more than 200 government, university, public and special libraries in all provinces. New accessions are reported regularly by these libraries, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1964, the Reference Division was asked to locate 23,149 titles and it is noteworthy that copies of 75 p.c. of them were found in Canadian libraries. About one third of the requests were for books in the field of science and technology and 80 p.c. were for books published since 1925.

In addition to *Canadiana*, the National Library publishes bibliographies and the annual cumulation of the *Canadian Index to Periodicals*.

The contract for the construction of the permanent National Library and Archives Building, on Wellington Street west of the Parliament Buildings in Ottawa, was awarded in May 1963. The \$10,000,000 building will be ready for occupancy in the summer of 1966.

The National Science Library.—The National Research Council Library serves as the library for the Council and as the National Science Library of Canada. Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916 and now known as the National Research Council (see pp. 371-377). The Library grew slowly until 1928 when the Council's first research laboratories were set up. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. By 1963, the Library's collection, comprising over 500,000 volumes, was growing at the rate of 130,000 items a year and included journals and other serial publications, books, pamphlets and technical and research reports. The bulk of this material is housed in the main Library with smaller and more specialized collections in six branch Libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. For purposes of current awareness, the Library issues

* A list of 400 selected titles of "Books About Canada", prepared by the National Librarian, appears in Chapter XXVIII of this volume.

twice a month its *Recent Additions to the Library*, and a list of *Serial Publications in the Library* is also issued at frequent intervals through the use of data processing equipment. Reference and research services include answering requests for scientific information, literature searches and the compilation of abstracts and bibliographies, and the identification and location of obscure publications.

The *Canadian Index of Scientific Translations*, a card index to the location of completed English translations in Canada and other countries, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa* (*Problems of the north*) is also the responsibility of this Section.

The National Science Library is responsible for the publication of the *Union List of Scientific Serials in Canadian Libraries* and the *Directory of Canadian Scientific and Technical Periodicals*.

Public Libraries.—Municipal, regional and provincial public libraries serve most of the urban, suburban and rural population of Canada. Provincial government agencies are responsible for public library service, and delegate this authority to municipal and regional boards, which organize, and largely finance, public library systems for local populations. Provincial agencies provide general supervision, grants and, in some cases, technical services and other assistance.

In addition to books and other printed material for children and adults, they provide films and filmstrips, and organize public lectures and other group activities. Public libraries are playing an increasingly important role in the lives of Canadian students of all ages, assisting them to complete school assignments and further their education. Distribution agencies include branches and depots, bookmobiles and other vehicles, boats in Newfoundland, and aircraft in the Yukon and Northwest Territories.

In 1962, public libraries in Canada stocked more than 15,500,000 books, or just under one book per capita, and the total book circulation was 65,143,573, or 3.5 per capita. They spent \$1.18 per capita on current operating payments and another 0.17 cents per capita on capital and debenture items, or a total of just over \$25,000,000. Local funds accounted for almost 80 p.c. of this amount and provincial grants for 13.7 p.c., the remainder coming from other sources.

University, College and School Libraries.—Libraries in 67 universities and colleges with enrolments of 100 or more full-time students had more than 8,000,000 volumes in stock in the academic year 1961-62, or 65 volumes per full-time student. Expenditures of these libraries averaged \$67.18 per student and amounted to a total of more than \$8,500,000. The full-time staff of the libraries numbered 1,236, almost one third of whom were professional librarians.

Close to 2,000 schools in 277 urban centres of over 10,000 population had centralized school libraries in 1961-62, serving more than 1,100,000 pupils. These libraries contained 5,190,200 volumes, or 4.7 per pupil served, and an average of \$2.18 per pupil was spent on books and other library materials. One half of the libraries employed full-time or part-time librarians; the other libraries reported no staff. Most of the staff were employed in secondary schools.

2.—Book Stocks in the Larger Academic Libraries and Enrolment Served, by Province, Academic Year 1961-62

¹ Full-time and equivalent.

Special Libraries.—The latest figures available for special libraries are for 1961. In that year 580 government and private special libraries contained more than 5,600,000 volumes as well as large stocks of pamphlets, periodicals, microcards, microfilms and other material. Most of the special libraries were located in Ontario (250), Quebec (150), and British Columbia (52).

3.—Summary Statistics for Special Libraries, 1961

NOTE.—These statistics are based on *Directory of Special Libraries and Information Centers*, Detroit, Gale Research Company, 1963.

Library Education.—Five Canadian universities give degree courses in library science—McGill, Montreal, Ottawa, Toronto and British Columbia. In 1963, there were 229 bachelor of library science graduates, about 70 p.c. of whom were women. More than 40 p.c. secured positions in university libraries, almost one fifth in public libraries, about one tenth in school libraries, and the remainder in special libraries and elsewhere. The median beginning salary of the graduates was \$4,875.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

The characteristic problems of this country, particularly its large area, its small population and its unique industrial structure, have led to a typically Canadian organization of research. Early research was, of course, related to the primary industries. Geological mapping and agricultural research were almost the only areas of activity until the beginning of the present century. In 1898 research in the field of fisheries was assigned to an independent honorary board which has continued to the present as the Fisheries Research Board. In 1916 the Federal Government set up the National Research Council; its early duties were to encourage and stimulate research in the universities through grants and scholarships and it entered active research only with the establishment of its own laboratory system in the late 1920's and early 1930's. Great expansion in scientific research took place during the War when the National Research Council assumed the responsibility for research for the three Armed Services including the development of atomic energy. At the end of the War, the Council returned to its previous activities—the promotion of research in the universities and research for secondary industry. The Defence Research Board was established in the Department of National Defence with responsibility for military research. In 1952, the Crown corporation, Atomic Energy of Canada Limited, was established to proceed with the development of atomic energy in Canada, and certain other Crown corporations such as Eldorado Mining and Refining Limited and Polymer Corporation, and Canada's largest national utility, the Canadian National Railways, developed important research programs.

Concurrently with these advances, the traditional departments of the Federal Government expanded and strengthened their research facilities—in particular, the Department of Agriculture and the departments responsible for mining, fishing, forestry and health. Medical research was long carried on in the hospitals and universities but received its first organized government support in 1938, support which increased rapidly after the War. Also, the provincial governments, with their responsibilities for education and for natural resources, contributed considerably to the support of research in the universities and seven provinces have now established or assisted financially in the establishment of research councils or foundations. Hydro-electric utilities in three provinces are provincially

operated and each has important research facilities; most particularly The Hydro-Electric Power Commission of Ontario has a large laboratory equipped to provide research services for all its technical activities and also to undertake both *ad hoc* and long-range research programs.

Industrial research has been slow to develop in Canada. While certain large industries, particularly the chemical industry and pulp and paper industry, had a long history of successful research effort, the primary resource base of other industries was not conducive to the establishment of industrial laboratories. Also, the prevalence of foreign-owned manufacturing companies exerted considerable influence on the development of industrial research. Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies and Canadian companies had little incentive to establish their own laboratories or to develop products specifically for the Canadian market. However, Canadian industry in general is now developing extensive research facilities and becoming much more aware of the advantages to be gained therefrom.

There are no large profit-making research institutes in Canada although several laboratories are available to undertake consulting, testing and experimental work in technological and engineering fields. Nor are there many non-profit research institutes in operation. The Ontario Research Foundation is the largest of this type in Canada. It is a self-governing research institute that engages in research and development on contract for manufacturers, departments of government and on its own account. Although initially financed by an endowment fund subscribed partly from industry and partly from government, its current revenue is derived largely from sponsored research. The British Columbia Research Council operates in a similar manner. Co-operative research through research associations is likewise a minor factor in Canadian research activity. The Pulp and Paper Research Institute of Canada (see Forestry Chapter) is the only example of a major research association. This institute is supported by industry but, from the outset, has been closely associated with McGill University and for many years the Federal Government provided a grant which was five years ago replaced by the construction and equipping of a laboratory for the use of the Institute; in the fall of 1963 it was announced that the Federal Government would make available \$3,000,000 to extend these laboratory facilities to meet the increasing demands of the pulp and paper industry for more advanced and diversified research essential to the maintenance of its competitive position in world markets.

Thus, there are three main sectors of research in Canada—government research, university research and research in industry. These three elements are covered in some detail in the following Sections and Subsections.

Mechanism for the Federal Science Policy.—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the National Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. The executive departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. The National Research Council, on the other hand, advises the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of the executive departments or agencies.

In 1949 the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an advisory body of senior officials to which it might turn for joint advice on the formulation and conduct of government scientific policies. Thus the Committee has now two advisory bodies—the National Research Council and the Advisory Panel. The Council, being composed of non-government scientists representing the universities, industry and labour, is admirably suited to keep the Committee informed of

the effect of government policy on the scientific activities of the country at large and to advise on the actions necessary to maintain the universities and independent research institutes in a healthy condition. The Panel, on the other hand, being composed of senior government officials, is the appropriate body to consider government policy affecting departmental activities and to advise the Committee on government action. The President of the National Research Council, as chairman of both bodies, provides for co-ordination and the proper division of responsibilities.

On Apr. 30, 1964, the Federal Government announced that a Scientific Secretariat would be established shortly to assemble and analyse information about the government's scientific programs and their inter-relation with other scientific activities throughout Canada. This organization, which will be a small fact-finding and analytical group serving in a staff capacity without executive authority, will be established as part of the Privy Council Office. Its function is to provide day-to-day support in the work of the Privy Council Committee.

Section 1.—The National Research Council*

History and Organization.—Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research—now known by the short title "National Research Council". The early Council provided for the planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors. This promotion and encouragement of research formed the basis of the Council's work from 1916 to 1924.

The creation of a central research institute, to carry on research in pure science in relation to standards of measurement, quality and composition of material, and in science applied to the industries of Canada, had been urged as early as 1918. A special committee of Parliament endorsed the proposal and in 1924 the Research Council Act was revised to include national research laboratories. Temporary quarters were secured and research on magnesian refractories for steel furnaces was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement, the Government, in 1929-30, provided funds for new research facilities.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932 and in 1939 construction was begun of an aerodynamics building on a 130-acre site on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A Prairie Regional Laboratory built on the campus of the University of Saskatchewan has been in operation since June 1948, and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax, N.S., was opened in June 1952.

Under the terms of the Research Council Act, the National Research Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. The Council also has the duty of advising the Privy

* Prepared by R. A. Lay, Public Relations Office, National Research Council of Canada, Ottawa.

Council Committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the country's natural resources. As a service to Canadian science, the Council maintains scientific liaison offices in Ottawa, London, Washington and Paris. The liaison officers abroad also serve as scientific attachés in the Canadian diplomatic missions. The National Research Council Library, with holdings of more than 500,000 volumes in science and technology (including 12,000 journals and other serials), acts as the National Science Library of Canada (see also p. 365).

The Council's laboratories are organized in nine divisions and two regional laboratories, each with its own director. Five divisions are engaged in applied and fundamental studies in the natural sciences—biosciences, applied and pure chemistry, and applied and pure physics. Four others are devoted chiefly to engineering work—building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the Prairie and Atlantic regions.

During World War II, the Council was responsible for all research carried out for Canada's three Armed Services. After the War, most of the military work was transferred to the Defence Research Board (see Chapter XXVII). Another wartime development, the Atomic Energy Project, was constituted as a separate Crown company, Atomic Energy of Canada Limited, in 1952 (see pp. 378-383).

A Medical Research Council, fully responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see pp. 390-391).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to Parliament through the Committee of the Privy Council on Scientific and Industrial Research.

The Council's current operating budget is about \$54,000,000. Approximately \$19,000,000 is required for foundation work—scholarships and research grants in science and engineering, plus the activities of the Medical Research Council—and the remainder is used to operate the laboratories and to provide for the Council's Industrial Research Assistance Program. Of the Council's 2,600 employees, some 730 are scientists and engineers.

Links with Industry.—The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 90 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see p. 119).

One of the Council's most important activities is its Technical Information Service. This consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's library. All inquiries are handled but the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on all aspects of materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting

long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance and the companies retain all rights arising from the work. In 1963-64, at a cost of \$1,600,000, the Council supported 88 research projects carried out by 56 Canadian firms. This work gave rise, also, to more than 350 new research positions.

Foundation Aspects.—University research in science and engineering has been supported by the Council since its inception in 1916. This aid has been of considerable help to the universities in building up the excellent graduate schools that now exist in Canada. Awards to individuals make up most of the university support program. Included are research grants to university staff used for employing assistants and purchasing equipment and supplies, postgraduate scholarships, and post-doctorate fellowships. Approximately 1,400 research grants and 850 scholarships and fellowships were awarded in the year ended Mar. 31, 1964, at a cost of \$12,600,000.

General promotion and encouragement of university research—the remainder of the program—includes publication of seven Canadian journals of research; contributions to scientific organizations and functions, Canadian membership in international scientific unions, and the administrative costs of the program. Expenditures for these activities in 1963-64 totalled \$1,140,000. An annual *Report on University Support* describes the foundation program in detail.

In 1948 the Council instituted a program of post-doctorate fellowships, open to Canadians and to the nationals of all other countries. Originally these were tenable in the Council's own laboratories but the training and experience brought to the work by the young scientists proved so stimulating that the program has been gradually expanded. Fellowships are now tenable at Canadian universities (these are considered part of the university support program), in the laboratories of Atomic Energy of Canada Limited, and in the federal Departments of Agriculture, Forestry, Mines and Technical Surveys, and National Health and Welfare. More than 250 of these awards are being held at the present time (June 1964), mostly in chemistry, physics and biology.

Biosciences.—This Division's program covers practical problems related to the national economy and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine and industry.

Apparatus and techniques for preparing, preserving and storing food make up a large part of the work, with particular attention in recent years to food freezing, cold storage and refrigerated transport. Recent studies have involved further tests on a process developed in the Division and now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions preventing coagulation in evaporated milk during sterilization were also investigated. Microorganisms related to the preparation and preservation of food are studied, particularly those found in salted foods and in cheese, and those that grow at low temperatures. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted, also, to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and also serve to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and an exhaustive study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose—the skeletal material of plants—and the structure and function of plant cells are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, carbohydrates and fats. One group, among its other projects, is engaged in

long-term statistical studies of protein variability in wheat and wheat exports. The work has been expanded recently to include the effects of weather factors on protein content.

Applied Chemistry.—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved solving immediate specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method can be extended easily to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. This work was expanded recently to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high temperatures—carried on over the past several years—has resulted in the successful preparation of a stable polymer that could not be produced by conventional means.

The twelve sections of the Division are: analytical chemistry, applied physical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, rubber and textiles. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.—The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semiconductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others study certain aspects of surface chemistry such as the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a small group interested in the chemistry of fats and oils.

Applied Physics.—The work in applied physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in the Applied Physics Division, which has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, instrumental optics, interferometry, mechanics, photogrammetric research, radiation optics, and X-rays and nuclear radiations. Industrial problems receive considerable attention, particularly calibration work and industrial noise abatement.

Examples of specific projects under way include a study of physiological noise and its relationship with the threshold of hearing, researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (available in two models—one for military and the other for civilian use), six- and five-figure potentiometers, and a precision direct reading thermometer bridge.

Pure Physics.—Investigations are under way on cosmic rays and high energy particle physics, low-temperature and solid-state physics, plasma physics, spectroscopy, theoretical physics and X-ray diffraction. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles have been made recently by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions. (See pp. 383-384.)

The low-temperature and solid-state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The plasma physics group, only recently established, is expected to make basic contributions to a field which may, in the long run, prove to be of importance in problems of controlled nuclear fusion. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultraviolet spectra, and considerable work has been done on optical masers. The theoretical physics group is at present concerned mainly with theoretical problems basic to the field of plasma physics.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material. Two of the major projects concern narcotics and vanadium minerals.

Building Research.—Technical improvements in housing are the primary concern of this Division. The research program therefore covers all aspects of housing design, building materials and components, and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon, Vancouver and Norman Wells.

Examples of Division projects are the behaviour of cement aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve humidity in buildings, air conditioning design data, snow and wind loads on structures, the properties of various soil types including permafrost and muskeg, and the effects on buildings of ground vibrations caused by earthquakes. A unique fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests.

As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in the Far North.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards now used by municipalities accounting for half the total urban population of Canada. The Division also provides the secretariat and considerable technical assistance to the Advisory Committee that produces the Code.

Mechanical Engineering.—This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a tool for end-to-end joining of blood vessels by a simple stapling operation.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. A new kind of breakwater has been developed which absorbs waves rather than reflecting them, and a breakwater utilizing this principle has been constructed at Baie Comeau. A promising scheme has also been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. Improved braking systems and cheaper fuels, lubricants and injectors have been developed. A long-term study is being made of the possible use of gas turbines in locomotives. The application of gas turbines to aircraft taking off and landing vertically is also being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is being done on the behaviour of lubricants at high pressures, and that of gases at extremely high temperatures.

National Aeronautical Establishment.—The National Aeronautical Establishment is designed to meet the aeronautical research needs of military and civil aviation, to co-operate with the Canadian aircraft industry, and to carry out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics.

Aerodynamics research from low speeds up to about $4\frac{1}{2}$ times the speed of sound is carried out in the Establishment's wind tunnels. Considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, anti-submarine magnetometry, and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing. Most of the work relates to product development, product improvement, or testing.

Radio and Electrical Engineering.—The work of this Division includes engineering problems of interest to Canadian industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

Engineering problems include long-range transmission of high-voltage direct current, corona studies, electronic aids to navigation, current and potential transformer investigations, rocket telemetry, and the development of electronic medical instruments and operating

room facilities. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance to Canadian industry in the development and manufacture of new antennas and radomes. Examples of recent developments by the Division are a compact transistorized marine radar for use by pleasure craft and fishing vessels, an underwater crash position indicator for locating submerged aircraft, an area display electrocardiograph showing the time variation of heart voltage between 70 points on the body, and a creative tape recorder much in demand by electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out in the fields of radio astronomy, upper atmosphere research, surface physics, and solid state physics. The Division is currently developing a radio observatory in Algonquin Park which will feature a radiotelescope having a parabolic reflector 150 feet in diameter. This apparatus is expected to be fully operational in the spring of 1966. A radiotelescope 33 feet in diameter is now in operation at the site.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory is engaged in practical and fundamental studies related to the resources and industries of the Atlantic Provinces. The work follows three general lines: chemical reactions at high temperatures; structures and reactions of naturally occurring organic compounds; and the biochemistry and physiology of fungi, marine algae, mosses, lichens, ferns and higher plants. Examples of specific projects are studies of the nucleic acids of seaweeds, a botanical survey of the peat bogs of Newfoundland and Labrador, and the determination of the molecular structure of several new substances isolated from marine plants. A number of new compounds have also been isolated from land plants, and these are being investigated. The high temperature studies are aimed at providing basic information of use in steel-making and related industries.

A recent development of considerable significance is the establishment of a close working relationship with Dalhousie University, Halifax. Under the new arrangement, students acceptable to the University's Faculty of Graduate Studies may now carry out research in the Atlantic Regional Laboratory, directed by Laboratory staff members holding unpaid appointments in the Faculty. The immediate aim of the scheme is to expand the facilities for graduate studies in the Atlantic Region. In the long run, the objective is to help create a strong scientific background conducive to large-scale development by industry.

Prairie Regional Laboratory.—One of the chief aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies. This is achieved by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents—such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up to systematically study extractives from local plants and shrubs.

The engineering and process development group is engaged in research on continuous fermentation processes, pulping processes on wood and straw fibres, and the effects of glyceride structure of fats and oils on the quality of margarines and shortenings. Large-scale processing and pilot-plant-scale operations are carried out. There is also a group working in the field of mycology, which is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Section 2.—Research in the Atomic Energy Field*

The high energy yield from the fission of uranium is the key to the prospect of economic nuclear electric power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It will be about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor (10 p.c. to 15 p.c.) component is fuel fabrication.

Hitherto the major atomic energy activity in Canada has been uranium mining and refining for export in support of military uses. A major transition, however, is taking place in which uranium production is giving place to engineering and construction of nuclear-electric generating stations. This phase will last until nuclear plants are established in such numbers and capacity throughout the world that the market for uranium revives and overtakes its former peak. There is some prospect that the economic advantages of the heavy-water reactors designed in Canada will lead to the adoption of this type in many other countries, with the creation of a market for heavy water that is expected to be produced competitively in Canada. The expected export of nuclear generating stations, heavy water and uranium fuel is appearing as a new near-term prospect on a small but significant scale.

In Canada, plans are already taking account of a revolutionary increase in the size of electricity-generating stations. The full-scale 200-megawatt reactor at present under construction has come to seem small (1 megawatt = 1,000 kilowatts). Steam turbines and conventional stations are now appearing in larger capacities and the prospects of long-distance high-voltage transmission to interconnect centres of load, together with the lower unit power costs that result from operating on a larger scale, cause utilities to plan large generating stations of 2,000 megawatts and more. The Canadian design of nuclear power reactor appears capable of expansion to keep pace, and will yield even more benefit than the conventional plant in the resulting reduction of unit power cost.

It is also significant that since lower unit power costs result from larger stations there is a new incentive for large utilities to export power from their systems and Canadian policy is changing to allow such export from Canada. Since the planning and construction of major power plants takes many years, these trends are not expected to be extensively realized before the 1970's. However, the prospect has already had its effect on atomic energy research and development.

Three Federal Government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Mining and Refining Limited, with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer, and large installations for the sterilization of medical supplies and other uses.

The Atomic Energy Control Board does not itself conduct research, but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow. The National Research Council also has made grants in the atomic energy field. In 1962-63 the total of all these grants was \$1,245,000.

* Prepared by Dr. W. B. Lewis, Senior Vice-President (Science), Atomic Energy of Canada Limited, Chalk River, Ont.

Eldorado operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. Eldorado co-operates with the Department of Mines and Technical Surveys, which carries out background research on the production and use of uranium.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from private industry, public and private power companies and the universities. The company's major plant is near Chalk River, Ont., and its Head Office and Commercial Products Division are in Ottawa. A new research centre has been established at Whiteshell, Man. The Power Projects Division in Toronto directs the engineering of power reactors and nuclear generating stations. The first project was NPD, a nuclear power demonstration plant to produce 20 megawatts of electricity, now in operation at Rolphton near the Chalk River establishment; its design and construction were carried out in collaboration with the Canadian General Electric Company Limited and The Hydro-Electric Power Commission of Ontario. The Power Projects Division of AECL, with the assistance of Ontario Hydro, has also designed and is constructing a full-scale nuclear power plant, known as CANDU, which will supply 200 megawatts of electricity to the Ontario Hydro system. This plant is being built at Douglas Point near Kincardine on Lake Huron. By agreement, Ontario Hydro will purchase the plant when it is in satisfactory operation. Larger units producing 500 megawatts are being designed for Ontario Hydro to build up generating stations of 2,000 megawatts or more. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the progress being made. This Committee, which was set up by the Federal Government in 1954, meets periodically at Chalk River to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company is under contract to design and construct WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment. The Canadian General Electric and Canadian Westinghouse companies are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Shawinigan Engineering, Orenda Engines Division of Hawker Siddeley Canada Limited, Canadian Westinghouse Company Limited, Montreal Locomotive Works Limited and Montreal Engineering Company Limited. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. For some years AECL expects to continue a consulting engineering role in the design of nuclear generating stations. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

In the international field, close ties are kept with the United States Atomic Energy Commission and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the USAEC to spend \$5,000,000 in the United States on research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as

well as with Australia, Japan, Pakistan, Sweden, Switzerland, West Germany, India, U.S.S.R. and, less formally, with Denmark, France and Norway. In India, a major experimental reactor—the Canada-India Reactor—similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961.

A 200-megawatt plant similar to that at Douglas Point is also being constructed in India on a co-operative basis, known as the Rajasthan Atomic Power Project (RAPP).

Chalk River Nuclear Laboratories.—At this research and development establishment, basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei, and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, the tandem Van de Graaff has made pioneer work possible by providing multiply charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, a correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure, but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation, it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful application in the technology of using an organic liquid as coolant in nuclear power reactors.

Since extracted plutonium is no longer required, the fuel in the NRX reactor has been changed from natural uranium metal to a combination of natural uranium oxide and a uranium-235 aluminum alloy. The available neutron flux has been increased thereby, while keeping the heat production at 42 megawatts. At the end of 1963, the fuelling of NRU was revised similarly. In this case the thermal neutron flux has been kept constant while the heat production has been reduced from 200 to 60 megawatts.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from other countries. A team of scientists from Harwell (Br.) and other countries is using a system of choppers for studying details of the slowing-down of neutrons by moderators. Both in NRX and NRU the exceptional facilities for irradiations in high temperature water, steam and organic liquids have brought teams from Britain and the United States and individuals from West Germany and Sweden to conduct tests important for the design of future power reactors.

Nuclear Power Prospect.—The generation of electricity by nuclear power on a competitive economic basis is expected to be established by the type of reactor now under construction by the Power Projects Division of AECL. This promise rests on the attainment of very-low-cost fuelling by an extremely simple system that has proved satisfactory in the Nuclear Power Demonstration Station reactor where there has been no fuel failure in the first two years of operation. The fuel is uranium dioxide specially prepared from

Name	Location	Date of Start-up	Power	Fuel	Moderator	Coolant	Use
Zero Energy Experimental Pile (ZEEP).....	Chalk River, Ont.	1945	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments

natural uranium entirely in Canada. A wide range of tests in hot channels in the NRX and NRU reactors at heat ratings and energy yields in excess of those required has established that this oxide fuel is incomparably more dependable than the uranium metal fuel for which the NRX and NRU reactors were originally designed. No provision for reprocessing the irradiated fuel is involved, for, by careful attention in the reactor design to minimize any waste of neutrons, a yield of over 9,000 megawatt-days of heat is expected from a ton of uranium before it is discarded. This results in a prospective fuelling cost of about one mill (0.1 cent) per kilowatt-hour of electricity, to be compared with about three mills from coal at \$8 a short ton.

Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for electric power is lower than in many other countries. Nuclear power plants of the types under construction in Britain and the United States were assessed as unable to reach a low enough cost level, at least until several successive plants have been built and operated to discover where economies are possible. Plants of the CANDU type do not promise to be significantly cheaper in total initial outlay, but the fuelling cost can be so much less that meeting the competitive target is a very real prospect.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. The first full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so that the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 feet in diameter and 16.5 feet long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a 9-inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in. inside diameter and about 0.16 in. thick. The fuel consists of bundles of 19 rods, 0.6 in. in diameter and 19.5 in. long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at 560°F to the steam boiler, where normal water is raised to saturated steam at 483°F and 38 atmospheres. These details show that the design represents a very considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that, for the same electric power output, the total heat production of the reactor has been brought down from 790 to 700 megawatts, the efficiency of the steam cycle itself has risen from 27.9 p.c. to 33.3 p.c., and the length of fuel rod has been reduced from 86 to 30 kilometers. The prospective fuelling cost has dropped from 1.85 mill/kwh. to 1.0 mill/kwh. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range of \$300 to \$400 per electrical kilowatt for the whole plant. However, a reduction is expected now that manufacturing experience has been gained which can be used in future construction. Even greater reductions in unit power cost are in prospect from an increase in the capacity of the reactor to 500 megawatts of electricity and the incorporation of several such units in a large generating station.

An evaluation was completed in 1963 of the relative prospects of four types of large power reactor for which development work was well advanced. All are heavy water moderated and would not require any reprocessing of spent fuel. The fuel could be natural uranium or slightly enriched in the form of uranium dioxide or uranium carbide. The differences lie in the coolant and steam cycle. The four coolants are pressurized (perhaps partly boiling) heavy water (as in CANDU), fog or wet steam, ordinary boiling water, and an organic liquid. The fog and boiling water reactors would pass steam directly to the turbine; the heavy water and organic liquid would raise steam via a heat exchanger. Cost estimates were based on experience in the construction of CANDU and carried out by the

same experts. It appeared that in the large sizes the construction costs were all comparable, showing only small differences that may not be significant. A larger difference arose from fuel fabrication costs. The results are summarized as follows.

UNIT POWER COSTS FOR LARGE GENERATING STATIONS

<i>Coolant</i>	<i>Reactors</i>		<i>Capital Cost</i>		<i>Fuel</i>	<i>Operating</i>	<i>Total</i>
	<i>No.</i>	<i>Electrical Power/mw.</i>	<i>\$/kw.</i>	<i>mill/kwh.</i>	<i>mill/kwh.</i>	<i>mill/kwh.</i>	<i>mill/kwh.</i>
D ₂ O.....	1	x 203	383	3.56	0.9	1.0	5.46
	2	x 203	344	3.19	0.9	0.8	4.89
	3	x 203	331	3.07	0.9	0.7	4.67
	1	x 457	252	2.34	0.82	0.73	3.89
	2	x 457	236	2.19	0.82	0.60	3.61
	3	x 457	231	2.14	0.82	0.56	3.52
	4	x 457	228	2.12	0.82	0.54	3.48
	1	x 750	222	2.06	0.71	0.56	3.33
	2	x 750	203	1.88	0.71	0.49	3.08
H ₂ O Fog.....	1	x 454	251.9	2.34	0.88	0.70	3.92
Boiling H ₂ O.....	1	x 457	257	2.39	0.71	0.70	3.80
Organic.....	1	x 457	234.3	2.18	0.44	0.86	3.48

Operating experience from NPD has been very satisfactory. Not only has there been no fuel failure, but the reactivity has been slightly higher than expected with some fuel now in the reactor over 5,000 mw.d/tonne U and the average 1,900 mw.d/tonne U (megawatt-days of heat per 1,000 kilograms of uranium). Heavy water losses have not proved excessive and have been reduced already to less than 6 lb./day. An availability of 90 p.c. or more appears a reasonable long-term prospect. On-power fuel changing is now routine and more than 60 fuel bundles have been so changed. In the NRX and NRU reactors at Chalk River, experience with defective fuel has been deliberately sought in fuel at ratings higher than required in the power reactors. Satisfactory techniques have been established for locating a defective element and for cleaning up the released radioactive fission products from the coolant system.

Section 3.—Space Research in Canada*

During 1963 there was a steady increase in Canadian space activities. The interests of Canadian scientists continue to be mainly in the field of aeronomy with particular, though not exclusive, emphasis on the high-latitude atmospheric and magnetospheric phenomena which are now generally believed to be related to the various disturbances on the sun. Canada, with its large land mass extending on both sides of the auroral zone, is ideally located for studies of medium- and high-latitude atmospheric phenomena and Canadian scientists have long been active in this exciting field. While many of the older programs of ground-based observations are still of great importance and are being carried out, the new measurements from satellites and rockets are making a significant contribution to knowledge of solar-terrestrial relations and in the next few years the importance of these studies using the new space techniques will increase.

The satellite program of the Defence Research Board, carried on in collaboration with the United States National Aeronautics and Space Administration (NASA), continues to form a major part of the Canadian space activities. The Canadian satellite 1962 Beta

* Prepared (May 1964) by Dr. D. C. Rose of the National Research Council, Ottawa.

Alpha (*Alouette*), which was launched on Sept. 29, 1962, is still in orbit. Its instruments are functioning satisfactorily and there is every indication that it will continue to operate and send back scientific data for many months to come. The satellite carries a number of experiments but its main objective is the sounding of the ionosphere from above. The ionosphere is the diffuse layer of highly-conducting gas lying between heights of about 60 to 300 miles. It reflects radio waves over a wide band of frequencies and is of great practical importance for communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio waves up from the ground and examining this pulse after it had been reflected back from the ionized regions. The satellite *Alouette*, however, was the first spacecraft to provide scientists with a continuous sounding of the ionosphere from above.

Other instruments carried by the satellite enable studies to be made of radio waves from outer space and very low frequency electromagnetic waves whose propagation is influenced by the earth's magnetic field. There are also a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belts and the artificial radiation introduced by high-altitude nuclear explosions. Data are transmitted from the satellite to the ground stations in several countries around the world and the magnetic tape records are sent to Ottawa for analysis. Scientific results to date have been most gratifying and the satellite measurements have added greatly to knowledge of the earth's upper atmosphere.

The over-all design and construction of the spacecraft were carried out by the Defence Research Telecommunications Establishment. Some components were made by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicle, the actual launching and much of the data recovery were undertaken by the NASA as part of its international co-operative program. This joint Canadian-United States program is continuing. Work on *Alouette B*, the successor to the present satellite, is well advanced and the spacecraft will be ready for testing in 1964. *Alouette B* will be the first of four satellites to be built in Canada for the International Satellites for Ionospheric Studies (ISIS) series. These vehicles, to be launched at intervals during the next five years, will carry more sophisticated instruments and orbit at greater heights than *Alouette I*.

Much of the increase in Canadian space activities has been the result of the re-opening of the rocket range at Fort Churchill in Manitoba. Following a disastrous fire, it was re-opened in November 1962 and brought into full operation early in 1963. The range is operated for both Canadian and American users by the United States Air Force under a joint agreement of the Governments of Canada and the United States.

Rockets have a special role in the space programs because there is an important region of the upper atmosphere that is too low for satellite orbits and too high to be reached by balloons or aircraft. This is the region between heights of about 25 and 200 miles. It is here that one finds the absorbing layers in the lower ionosphere which cause radio black-outs and it is here that one detects the complex atmospheric processes which produce the visible aurora. Because the axis of the earth's magnetic field is tilted, the auroral zone sweeps down across Canada and Churchill lies almost in the middle of this zone. This region of the atmosphere is therefore of great interest and importance to Canadian scientists. For many years investigations were limited to ground-based radio and optical measurements but now rockets are being used to carry instruments right into the aurora. These measurements, *in situ*, of electron density, temperature and charged particles will ultimately lead to a proper understanding of the aurora and high-latitude disturbances.

Many of the rockets fired at Churchill are of Canadian design and development. These are the Black Brant rockets which were pioneered by the Defence Research Board and are now produced commercially in Winnipeg. The first in the series, the *Black Brant I*, was an experimental vehicle and is now obsolete. *Black Brant II* is a 17-inch diameter vehicle capable of carrying 150 lb. of payload to over 100 miles. *Black Brant III* is a smaller rocket, 10 inches in diameter which will lift 40 lb. to about 100 miles. *Black*

Brant IV will be a combination of *II* and *III* and will go to a height of about 600 miles. *Black Brant V* is an optimum design of the *II*. Most of the flights have been made with the *II*'s but the *III*'s have been tested and these and the *IV*'s will be coming into use in 1964.

Along with the increased activity in Canadian space programs there has been a general broadening of interests. The Meteorological Branch of the Department of Transport (DOT) has formed a Meteorological Satellite Data Laboratory in order to promote applications of satellite observations to the problems of meteorology and ice reconnaissance. In the field of communications satellites, the DOT has reached an agreement with NASA whereby Canada will participate in the testing of such spacecraft as *Telstar*, *Relay* and *Syncom* and an experimental ground station is planned to obtain information for the development and use of communication satellite systems.

It would be quite misleading to suggest that space programs are limited to government departments. Canadian universities are now very active in this field. At present there are nine university groups preparing instruments for rockets, balloons or satellites for upper atmospheric studies. Canadian industry is also filling an important role in the space age. Civilian contractors are producing both instruments and space vehicles. Other firms have entered the field of system design and are providing high-level consulting service on problems pertaining to communications satellites. Important fundamental research on materials and in the field of plasma physics is also being carried on in industrial laboratories. This industrial contribution to the Canadian space effort is increasing and must now be counted as a very important part of its space programs.

Section 4.—Other Scientific and Industrial Research Facilities

This Section outlines research facilities and activities other than those covered in Sections 1, 2 and 3—various federal departments and agencies, provincial organizations, universities and industry. The first three types of institutions—federal, provincial and university—have, of course, an interest in problems of industrial significance. As already stated, though many Canadian industries now possess research facilities—some of them quite extensive—much of the industrial research to date has been done under government auspices.

Subsection 1.—Federal Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. In addition to the activities of the National Research Council and Atomic Energy of Canada Limited, dealt with in Sections 1, 2 and 3, federal agencies involved in research include the Departments of Agriculture, Forestry, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, and Northern Affairs and National Resources.

The scientific work of the Department of Agriculture is described in Chapter XI of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XXI, the specialized work in scientific forest research in Chapter XII, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapters I and XIII, investigational work of the Department of Fisheries in Chapter XV, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, medical and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, and the work of the Defence Research Board in Chapter XXVII.

Late in 1963 the Department of Northern Affairs and National Resources completed the first permanent scientific research laboratory to be built north of the Arctic Circle. This laboratory, at Inuvik, N.W.T., has year-round facilities specially designed for Arctic research and will serve as a base for extensive field studies in the Western Arctic. It will accommodate a permanent staff of eight scientists from many disciplines and up to 16 visiting researchers. The operation of the laboratory is in charge of a Manager working under the direction of the Northern Co-ordination and Research Centre of the Department.

Subsection 2.—Provincial Organizations

Five of Canada's provincial governments have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such organizations. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution, and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry, engineering and operations research. A *Research Foundation Bulletin* is issued from time to time to keep industry advised of Foundation activities and also of important discoveries in science and technology.

The New Brunswick Research and Productivity Council.—The aims of this Council, established by an Act of the Legislature in 1962, are *inter alia* to "promote, stimulate and expedite continuing improvements in productive efficiency and expansion in the various sectors of the New Brunswick economy". The Council receives an operating grant from the provincial government and support in specific areas from federal sources. Buildings are being designed for erection on a site adjacent to (and ultimately upon) the campus of the University of New Brunswick. Staff, numbering six at the beginning of 1964, is expected to increase to 15 during the year and 35 in five years time. Current efforts of the Council are centred on work simplification, management training and applied research to solve specific problems facing provincial industry. The Council also supports research in universities throughout the province. Applied research projects to be undertaken during 1964 will be chiefly in the fields of food technology, mineralogy and mechanical and chemical

engineering. Policies are established by 13 Council members representative of provincial industry, government and education and control is through this Council and a limited number of specialist committees. The Council chairman reports annually to the Premier of the province.

Manitoba Research Council.—The Manitoba Research Council was created by the Government of Manitoba in 1963 under the sponsorship of the Department of Industry and Commerce. The Council operates under an Act as an agency of the government and is financed by provincial government appropriations, although fees and service charges may be levied on specific firms or individuals who use the services of the Council. The objects of the Council are both to promote and carry on research and scientific inquiries in the field of agriculture, other natural resources and industry and to help secure for the Manitoba economy the benefits of research carried on elsewhere. Although it will promote and may engage in pure research, the Council's primary aim is to encourage applied research and the commercial use of new concepts, methods and techniques in the province. The preponderance of small industry in Manitoba and their need for assistance in developing a more sophisticated production capability to improve their competitive position in domestic and world markets was the major technical requirement leading to the establishment of the provincial Research Council.

The operations of the organization are the direct responsibility of seven persons representative of natural-resource-based industry, manufacturing and labour. Although the Council is sponsoring a number of research projects on the industrial application of the province's natural resources, the provision of permanent laboratories is not contemplated at the present time. In the immediate future the Council will continue to sponsor research projects particularly for those industries using the products of the province's primary resources. It is also engaged in a program to co-ordinate existing private and public research facilities within the province.

The Council maintains an office in the Provincial Government Administration Building (the Norquay Building) in Winnipeg.

Saskatchewan Research Council.—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, now numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, industry and the university.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is principally financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province and toward the establishment of new industrial operations within the province. Investigations in the

Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, mineral beneficiation and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, chemical process and product development, and gasoline and oil testing. There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are reviewed by advisory committees composed of specialists in each field, drawn from industry, the university and the provincial government.

The main Council laboratories are located on the University of Alberta campus.

The Ontario Research Foundation.*—The Ontario Research Foundation, established in 1928, operates as an independent corporation, deriving its powers from a special Act of the Legislature and governed by a Board of Governors appointed by the Lieutenant-Governor in Council of Ontario. The organization was financed initially by an endowment fund composed of subscriptions from commercial and industrial corporations, from private individuals, and a grant from the provincial government. However, most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physics, metallurgy, biochemistry, textiles and engineering. Other Foundation departments, such as parasitology and physiography, are engaged particularly in studies related to Ontario's natural resources. A field engineering and technical information service is provided free to industry, sponsored by the Ontario Department of Economics and Development and by the National Research Council.

British Columbia Research Council.*—This Council is a non-profit, industrial research institute with offices and laboratories on the campus of the University of British Columbia. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. The Council provides a free technical information service in collaboration with the National Research Council, carries out contract research for clients on a confidential basis and initiates "in house" research programs designed to promote and utilize the resources of the province. The Council is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial market studies and economic feasibility studies.

Subsection 3.—University Research

Research conducted in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; research undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or inter-faculty basis in university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and faculties of agriculture, utilizing the services of some undergraduate but mostly graduate students.

* See also p. 370.

Outside financial support for university research comes primarily from four sources: agencies and departments of the Federal Government including the National Research Council, the Medical Research Council and the Defence Research Board, which provide grants for approved and contracted government-sponsored research (the financial aspects of which are shown in the statement on p. 397); industry, which supports both basic and applied research; private foundations, which provide grants for approved research, sometimes in selected fields; and provincial governments.

The total range of individual and group research projects carried on in Canadian universities is encyclopaedic. Some information on the areas covered may be obtained from such annual publications as *Education Studies in Progress in Canadian Universities** and from four annual National Research Council publications—*Students Registered in the Graduate Schools of Canadian Universities in Physical and Earth Sciences*; *Students Registered in the Graduate Schools of Canadian Universities in Architecture and Engineering*; *Students Registered in the Graduate Schools of Canadian Universities in Life Sciences*; and *Statistical Summary of Students Registered in the Graduate Schools of Canadian Universities in Physical and Earth Sciences, in Architecture and Engineering and in Life Sciences*. Also, the annual reports of individual institutions give information on grants and gifts for research and list current staff publications which combine to offer a kaleidoscopic view of current activities in the field of university research.

Much of the financial support for university research is provided by the Federal Government through the National Research Council. Such support is described as: *direct*, consisting of support to individuals in the form of scholarships, fellowships and grants-in-aid of research; and *indirect*, consisting of assistance related to the promotion and encouragement of research at the universities, such as contributions to scientific organizations and function, publication of research journals, and the administrative expenses of the program. The National Research Council is responsible for determining policy for and administering the program. A wide variety of committees, comprised mainly of university scientists appointed for varying terms, assist in carrying it out.

Federal expenditures by the NRC on university research programs during the years ended Mar. 31, 1962 and 1963 were as follows:—

Bursaries awarded in 1962-63 had an individual value of \$2,000 per annum; student-ships, \$2,400; special scholarships, \$2,400; NRC post-doctoral overseas fellowships and NATO science fellowships, \$3,500 (single), and \$4,500 (married males); experimental psychology scholarships, \$2,400; graduate dental research fellowships, \$2,500 to \$5,000; post-doctoral fellowships held at Canadian universities, \$4,000 (single), and \$5,000 (married males).

During 1962-63, operating grants were given in the following fields, with additional grants for major equipment: biology, chemical and metallurgical engineering, chemistry, computers, earth sciences, engineering and physics; operating grants only were given for oceanography, experimental psychology, dental research, pure and applied mathematics and space research. Special major installations grants were made to the Physics Department of the University of Saskatchewan (\$250,000) and to the Physics Department of the University of Alberta (\$225,000). Atomic Energy Control Board grants were made to the following universities: Alberta, Saskatchewan, Manitoba, Laval, Montreal, Queen's, McMaster and McGill. Travel grants were provided to attend conferences, international association meetings, congresses, etc.

Starting with the year ended Mar. 31, 1963, the NRC is awarding a limited number of senior research fellowships to Canadian university staff members beyond the age of 35 years who have been granted sabbatical leave. These awards are calculated on the basis of \$4,000 (single) and \$5,000 (married) per annum plus a contribution toward travel. Six such fellowships were awarded in 1962-63, representing the following universities: British Columbia, Ottawa, Queen's, McMaster and McGill.

The Medical Research Council is concerned mainly with the development of medical research and the support of medical research workers in the university centres of Canada. Its program, therefore, is almost entirely extramural. Research in the broad field of medical sciences is supported chiefly through an extensive program of grants-in-aid of investigations proposed and carried out by members of the staffs of Canadian universities and their affiliated hospitals and institutes, and through the provision of personnel support, chiefly by means of fellowships and associateships.

Operating grants support the normal operating costs of the research; major equipment grants provide for the purchase of units of special research equipment; travel grants are awarded to investigators to enable them to visit other laboratories or attend scientific conferences. A general research grant is given to the Dean of each of the twelve Canadian medical schools, to be used at his discretion for the development of medical research in his university.

Under the Medical Research Associateship Program, salaries are provided for a limited number of highly qualified independent investigators working in Canadian universities; in 1962-63 there were 29 Associates. Fellowships are awarded for advanced training and experience in research in the medical sciences; during 1962-63, 82 awards were accepted. To stimulate the interest of honour students in research and to give them early training, each Canadian medical school is provided with funds for two summer undergraduate scholarships valued at \$1,000 each, tenable for a period of three months.

During the 1962-63 academic year, the Medical Research Council participated in several special activities: it contributed to the cost of the Annual Scientific Meeting of the Western Regional Group, sponsored jointly by the Medical Research Council and the National Cancer Institute of Canada; it provided funds to permit a visiting scientist of international reputation to spend three months at Dalhousie University; and it contributed to the cost of collecting human pituitary glands for the production of human growth hormone to be used in research.

Expenditures by the Council for the years 1961-62 and 1962-63 were as follows:—

<i>Program</i>	<i>1961-62</i>	<i>1962-63</i>
	\$	\$
Fellowships.....	242,039	353,408

Subsection 4.—Industrial Research

Industrial research in Canada is changing very rapidly. The emergence of the country as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations.

On Nov. 29, 1962, an amendment was passed by Parliament to the Income Tax Act, allowing corporate taxpayers, commencing in 1962, to deduct 150 p.c. of their increased expenditures on scientific research for industrial purposes when computing taxable income. This amendment is evidence of the Federal Government's desire to encourage industrial research. It is early to assess the effects of these tax incentives. Although expenditures for research purposes continue to rise, such increases depend on many factors and there is not necessarily a short-run relationship between tax encouragement and higher research spending. However, the first results of the amendment seem to be along the line of encouragement to existing research and development departments to continue and extend their efforts rather than to establish new programs aimed at developing new products or processes.

Industrial Research and Development Expenditures.—The latest DBS survey of expenditures on industrial research in Canada was conducted in 1963 and provided figures for the calendar year 1961 and estimates for the year 1962. These figures are summarized in the following tables; details are contained in DBS publication *Industrial Research and Development Expenditures in Canada, 1961* (Catalogue No. 13-520). Results of the next survey, covering 1963 expenditures with estimates for 1964, are expected to be available during the winter of 1964-65.

The type of industrial research and development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products and processes, or major changes in products and processes, and bringing them to the stage of production. Such activities as market research and process and quality control are excluded. Companies surveyed were asked to report the cost of research and development done within the company in Canada and payments

for research done outside the company in Canada; estimates of payments for research and development conducted outside the company and outside of Canada were also requested.

Total figures show considerable fluctuation in expenditures on research and development over the years surveyed. However, this fluctuation has been caused largely by variations in Federal Government contracts to the aircraft sector of the transportation equipment industry. If all funds received from the Federal Government are removed from annual expenditures, a trend of continuous expansion is revealed. In 1961, 523 firms reported research expenditures; of these, 16 accounted for one half of all intramural research expenditures.

1.—Total Research and Development Expenditures, 1955-62

Year	Expenditure on Research and Development in Canada		Expenditure on Research and Development Outside Canada	Total
	Done Within Reporting Company	Done Outside Reporting Company		
	\$'000,000	\$'000,000	\$'000,000	\$'000,000
1955.....	51.4	1.9	12.1	65.4
1957.....	124.5	4.2	19.8	148.5
1958 (estimate).....	132.5	1	27.0	159.5
1959.....	96.6	3.3	21.7	121.6
1960 (estimate).....	81.7	1	27.3	109.0
1961.....	113.3	4.3	31.2	146.4 ²
1962 (estimate).....	118.3	1	35.4	153.7

¹ Included with expenditures outside Canada.

² Since extramural payments shown for 1961 include a number of payments which become intramural expenditures for the recipient firms, the total has been adjusted to exclude duplication.

Three industries—transportation equipment, electrical products, and chemicals and chemical products—have accounted for more than one half of all research and development performed in Canada every year since 1955. In 1961, for the first time, the research and development expenditures of the transportation equipment industry, which are used largely for aircraft development, did not exceed those of every other industry. In that year the electrical products industry, which includes electronic equipment, was the leading performer of industrial research and development.

2.—Research and Development Expenditures in Canada, by Major Industrial Group, 1959 and 1961

Group	1959		1961	
	Amount	P.C. of Total	Amount	P.C. of Total
	\$		\$	
Transportation equipment.....	26,464,397	26.5	19,863,486	17.2
Electrical products.....	16,027,237	16.0	21,765,159	18.9
Chemicals and chemical products.....	14,430,145	14.4	20,970,037	18.2
Totals.....	56,921,779	56.9	62,598,682	54.3
Other industries.....	42,952,756	43.1	52,557,544	45.7
Grand Totals.....	99,874,535	100.0	115,156,226 ¹	100.0

¹ This total is not equal to the sum of intramural and Canadian extramural expenditures; it has been adjusted to account for those payments that are intramural for one firm but extramural for another.

Table 3 shows intramural research and development expenditures over the four years 1959-62. The transportation equipment industry is given separately because of substantial fluctuations in its expenditures. Most of the other industries have increased their research

and development activities over the period; the chemical and electrical products industries reported the greatest absolute increases, together having accounted for over 40 p.c. of total intramural expenditures (excluding those of transportation equipment) since 1955.

3.—Intramural Research and Development Expenditures, by Industry, 1959-62

Totals, All Industries.....	96,590,381	81,681,155	113,255,299	118,258,329

¹ Estimates based on the companies' intentions for these years.

The product group for which the largest percentage of research and development expenditures was made in 1961 was the chemicals group (17.5 p.c.). Aircraft and parts, which in 1959 accounted for almost one quarter of intramural expenditures, declined considerably in relation to other product groups in 1961. In that year the aircraft and parts product group received only 15.7 p.c. of the expenditures, almost \$6,000,000 less than in 1959. After chemicals and aircraft, the product groups receiving the largest amounts were, as in 1959, electronics and primary metals.

4.—Intramural Research and Development Expenditures, by Product Group, 1961

Product Group	Amount	P.C. of Total	Product Group	Amount	P.C. of Total

The relative contributions of the different sources of funds for intramural research and development changed from 1959 to 1961. The proportion of research funds provided by the performing companies themselves increased again in 1961, while research and development funds from government sources continued to decline. Research contracts given to firms by other companies were measured separately in 1961, and were found to account for almost 5 p.c. of all intramural expenditures. The electrical products and the transportation equipment industries received the largest amounts of external funds from all sources, such funds amounting to 51.8 p.c. and 38.4 p.c., respectively, of their total intramural expenditures on research and development.

**5.—Sources of Funds for Intramural Research and Development,

Section 5.—Federal Government Expenditures on Scientific Activities

Biennial surveys carried out by the DBS give information on Federal Government expenditures on scientific activities for the years ended Mar. 31, 1959-65. Each survey covers the actual costs of the preceding year and the estimated expenditures for the current year incurred by the physical and life sciences; the social and psychological sciences are not included. For purposes of the survey, "scientific activities" include scientific research and development, scientific data collection, scientific information and scientific scholarships. Data are also compiled on capital expenditures on plant for scientific activities and on personnel employed in research and development.

As shown in Table 6, total 1962-63 costs of scientific activities were slightly lower than those incurred in 1961-62 but estimates indicate a rise of 16 p.c. in 1963-64 and of 12.5 p.c. in 1964-65. Among the departments and agencies, the National Research Council records the greatest increase during the period, its 1964-65 expenditures of \$62,600,000 being 56.1 p.c. higher than those for 1961-62. The departments and agencies listed in Table 6 accounted for 92 p.c. of the Federal Government's expenditure on scientific activities in 1958-59 but their relative share will decrease to 80 p.c. by 1964-65. During the latest year, each of six other departments—Industry, Fisheries, Forestry, National Health and Welfare, Northern Affairs and National Resources, and Transport—reported its intention to spend more than \$5,000,000 on scientific activities.

Federal expenditures on scientific activities are classified in greater detail in Table 7 for the years ended Mar. 31, 1963 and 1965. In this table, expenditures by the Department of National Defence, which make up almost one quarter of the total, are shown separately.

¹ Estimated.² Capital expenditures by two of the three Services are unavailable.

About three quarters of the payments made by the Federal Government on scientific activities are for the conduct of research and development. Although the Government continues to perform most of this research within its own establishments, its support of outside research is increasing; in 1961-62 intramural expenditures accounted for 80 p.c. of the total but by 1964-65 this percentage will have fallen to about 69. The proportion performed by Canadian industry, which was 11 p.c. in 1961-62, will have increased to 20 p.c. by 1964-65, and that performed in Canadian universities will have increased from 7 p.c. to 10 p.c. in the same comparison.

8.—Federal Government Expenditures on the Conduct of Research and Development, Years Ended Mar. 31, 1962-65

(Millions of dollars)

Performing Organization	1961-62 ¹	1962-63	1963-64 ¹	1964-65 ¹
Reporting department or agency	154.5	148.9	159.8	167.1

Educational institutions and individuals at such institutions	14.0	16.9	19.0	24.4
Others (incl. non-profit organizations, other governments and foreign recipients)	3.4	2.9	4.0	3.4
Totals, Expenditures	192.7	188.9	219.6	243.0

¹ Estimated.

As shown in Table 9, the proportion of government funds allotted to the support of research and development in the physical sciences increased over the period 1962-63 to 1964-65 from about 70 p.c. to 74 p.c., and engineering continued to receive more than 55 p.c. of these funds. Within the life sciences, more than one half of the research and development expenditures continue to support the agricultural sciences. Table 9 also classifies research and development expenditures by area of investigation. It is noteworthy that expenditures in the field of space travel and communications increased from 0.9 p.c. of the total in 1962-63 to 3 p.c. in 1964-65. In the latter year, approximately 16 p.c. of the research and development expenditures will be allotted to nuclear science research and 35 p.c. to military research.

Section 6.—A Selection of Canadian Achievements in Science and Technology, 1800-1964*

There can be nothing *authoritative* or *definitive* about any list of Canadian achievements in science and technology, since even the ground rules for selecting individual items are based, at best, on a cross-section of personal opinions. The compilation offered here is thus admittedly tentative and arbitrary, almost by definition—or rather, by lack of definition. After all, what exactly is *technology*? What do we mean by *achievements*? And, perhaps the most vexing question of all, when is an achievement *Canadian*?

The invention of the telephone is a case in point. The patent was issued to Alexander Graham Bell (a Scotsman) on Feb. 16, 1876, for work done the previous year in Boston (a city in the United States), but Bell himself is said to have fixed the date and place of the invention as the summer of 1874 at his father's house in Brantford, Ontario (in Canada). It was two years later, Aug. 10, 1876, that the famous first telephone message was sent a distance of 8½ miles over wires lent by the Dominion Telegraph Company, between Brantford and Paris (Ontario). This was the crucial experiment by which Bell proved that the telephone could be of commercial value. The question may well be asked: What role does the accident of geography play in a great achievement when the basic work was done elsewhere?

It should also be made quite clear that the list of achievements merely mentions typical landmarks in the vast panorama of scientific, agricultural and industrial progress in Canada. The vital role played by inventors and innovators in the development of a modern nation becomes obvious even to the superficial reader of the accomplishments set out in the list; but the brilliant contributions of these individuals must not blind us to the extremely valuable work of thousands of eminent Canadians who devoted their lifetime to science, medicine, engineering, education, research administration, exploration, etc., and who happened to be involved in the *gradual* solution of a great variety of problems rather than concentrating on the *spectacular* solution of a single one.

On the whole, most of the outstanding Canadian accomplishments are linked with the transportation and communication facilities that are the life-lines of this vast country with its small population. Many individual items were developed elsewhere but Canadians put them together and adapted them to Canadian conditions. Canada's railways, airlines, radio and television networks, the St. Lawrence Seaway and the Trans-Canada Highway are existing monuments to the ability of Canadians to meet the challenge of their tremendous, rigorous and complex country.

- 1796 John McIntosh, while clearing his farm near Dundela, Ont., found and transplanted several apple trees; the delicious red apples from one of these became famous and McIntosh gave them his own name. His son, Allan, developed the variety which is now grown in many parts of North America.
- 1804 David Fife, farming near Peterborough, Ont., developed the first Canadian wheat to be resistant to rust. His plant-breeding efforts were the fore-runners of large-scale, systematic, government-sponsored agricultural experiments. Rapid development of high-quality grain production, especially in Western Canada, made it possible for Canada to become one of the world's leading wheat exporters.
- 1847 Daniel Massey, a farmer near Cobourg, Ont., bought a small foundry and started manufacturing basic farm tools. This was the humble beginning of Massey-Ferguson, one of Canada's best-known establishments and one of the world's leading farm-machinery manufacturers. In addition to its great contribution to Canadian agriculture and industry, the Massey family became prominent in the cultural development of the country.
- 1851-52 C. N. Tripp of Woodstock, Ont., started to develop the "gum beds" along Black Creek (some 30 miles southeast of Sarnia) to recover asphalt. His discovery of oil in this region led to the drilling of the world's first commercial oil well by Hamilton industrialist James M. Williams at what is now Oil Springs, Ont. Ever since that time, Canada has been in the forefront of all phases of oil exploration, drilling, pumping, pipeline building, and refining.
- 1852 Frederick Newton Gisborne, having developed a method of insulating a wire so that it would be impervious to saltwater corrosion, successfully laid an undersea telegraph cable from

*Compiled by Dr. John R. Kohr, National Research Council of Canada, Ottawa.

- Tormentine, N.B., to Carleton Head, P.E.I., and then conceived the idea of establishing telegraphic communications with Europe by way of Newfoundland. He enlisted the co-operation of the Newfoundland Government and the financial support of Cyrus W. Field, thus assuring the laying of the Cape Breton-to-Newfoundland Cable in 1856 and the Atlantic Cable in 1858.
- 1874** Alexander Graham Bell arranged an experiment for the first telephone message to be transmitted over a relatively long distance, thus proving that the telephone had commercial possibilities. The message was sent a distance of $8\frac{1}{2}$ miles—one way—over wires lent by the Dominion Telegraph Company, between Brantford and Paris, Ont.
- 1883** The first working model of a revolving snow shovel, invented in 1869 by J. W. Elliott of Toronto, Ont., and further developed by O. Jull and the Leslie Brothers of Orangeville, Ont., was placed on trial in the Canadian Pacific Parkdale yards at Toronto. The rotary snow plows in use today are descendants of this shovel and are indispensable for rail operation in many parts of the world—from Archangel to the Andes. Canadians continue to be among the leaders in the design of various other snow-clearing and over-snow vehicles.
- 1884** Sir Sanford Fleming's system of international standard time measurements was adopted by the International Prime Meridian Conference held at Washington, D.C. Without this system, transcontinental time tables would be a nightmare of local time notations.
- 1892** Thomas Ahearn, a pioneer in the field of electrical engineering, produced the world's first meal cooked by electricity, during a demonstration of his new stove at the Windsor Hotel, Ottawa.
- 1901** Guglielmo Marconi succeeded in receiving at St. John's, Nfld., wireless signals transmitted across the Atlantic Ocean from England. This feat may be considered Marconi's greatest triumph, especially since it disproved the theory of some distinguished mathematicians that communication by means of electric waves would be impossible beyond the 200-mile range, owing to the curvature of the earth. Although this epoch-making achievement can by no means be considered *Canadian*, it had a direct bearing on Canada's early role in wireless telegraphy. When a telegraph and cable company claimed a monopoly to receive transatlantic signals in Newfoundland, Marconi gave up further tests and made plans to return to Italy via New York but, upon landing at North Sydney, he was persuaded by Johnston (then a newspaper editor and a Member of Parliament and subsequently Deputy Minister of Marine and Fisheries) and by G. H. Murray (then Premier of Nova Scotia) to consider a site on Cape Breton for his wireless base to Europe. Johnston and Marconi seem to have encountered surprisingly little resistance to their proposal of having the Canadian Government provide Marconi with the sum of \$75,000 for the erection of the Cape Breton station. Thus, one of Canada's great systems of communications got its early start.
- 1902-03** Ernest Rutherford (later Baron Rutherford of Nelson), Professor of experimental physics at McGill University, Montreal, and Frederick Soddy, then demonstrator in chemistry, developed the disintegration theory of radioactivity—"a staggeringly bold hypothesis to come from two comparatively young workers . . . it triumphed because, and only because, no other theory was capable of explaining the then known facts of radioactivity" (H. R. Robinson). Their investigations made McGill for the time being the world centre of research in atomic science and stimulated higher education throughout Canada.
- 1903** The world's first electrolytic lead-refining plant using the Betts cell process was installed at the smelter at Trail, B.C. Subsequent developments in the metallurgy of lead include a gradual improvement in roasting practices, culminating in double sintering, and the development of the slag-fuming process for the recovery of lead and zinc from blast-furnace slag.
- 1903** With the appointment of Dr. Charles Saunders (later Sir Charles Saunders) as Dominion Cerealist, Canada entered a new phase as an agricultural world power. Dr. Saunders and his co-workers developed the early-ripening Marquis wheat which played an important role in the opening up of the prairies. Subsequently, he was instrumental in developing Ruby, Garnet and Reward wheat adapted to special prairie conditions.
- 1903-32** Frederick Walker (Casey) Baldwin became internationally known for his work on hydrofoils, which permit boats to skim over the water at very high speed. The principles now employed in hydrofoil craft were first developed by Casey Baldwin. A Canadian Navy craft was named the *KC-B* in his honour.
- 1907** Alexander Graham Bell organized the Aerial Experiment Association at Baddeck, N.S. The other participants in this venture—the first aeronautical research establishment in Canada—were two young Canadian engineers, F. W. (Casey) Baldwin and J. A. D. McCurdy, together with two United States citizens, Thomas Selfridge and Glenn Curtiss. Outstanding among the many contributions made by this group was the invention of the aileron for lateral control.
- 1910** J. A. D. McCurdy, one of the world's outstanding aviation pioneers, transmitted a wireless message in flight, thus establishing the world's first aeroplane-to-ground communication. Operation of modern airlines would be unthinkable without the link provided by communications systems for the control of air transport.

- 1911** The most remarkable achievement of Canadian tunneling is the system of spiral tunnels on the CPR line through the Kicking Horse Pass in the Rocky Mountains. The tunnels compose a gigantic figure eight, more than 1.1 miles in length, with a gain in elevation of 104 feet and a gradient of only about 1.7 p.c.
- 1921** Dr. Frederick G. Banting (later Sir Frederick Banting), working in the laboratory of Dr. J. J. R. MacLeod at the University of Toronto, and with the aid of Charles H. Best, succeeded in isolating insulin—one of the great medical discoveries of all time. In the following months, J. B. Collip found a means of purifying insulin. Use of this substance has revolutionized the therapy of diabetes and has led to a fuller understanding of carbohydrate metabolism.
- 1923-27** Wallace Rupert Turnbull of Rothesay, N.B., invented the controllable-pitch propeller, which has given aircraft more flexible performance and greater safety.
- 1927** The first transcontinental radio network in the world was set up in connection with the Diamond Jubilee of Confederation, through the co-operation of the railway companies, telegraphs, the Bell Telephone Company, and the Department of Marine. Later, after the formation of the CRBC and then the CBC, Canada had the longest radio network in the world. When Canada began, through the CBC, a television service in 1952, its growth in terms of availability to Canadian homes is claimed to have been the fastest in the world.
- 1930** The Consolidated Mining and Smelting Company of Canada installed, at Trail, B.C., the equipment with which to recover sulphur dioxide from roaster and sinter gases that formerly went to waste. The gas was used to make sulphuric acid, which in turn became the basic ingredient in the manufacture of chemical fertilizers. This was the beginning of a fertilizer plant that ranks among the largest in the world.
- 1932** Dr. L. M. Pidgeon, then a research chemist with the National Research Council (subsequently Professor and Head of the Department of Metallurgical Engineering, University of Toronto), developed a process for production of metallic magnesium, employed by one plant in Canada and five plants in the United States. By making the extraction of magnesium metal from calcined dolomite commercially feasible, Dr. Pidgeon's process terminated Canada's dependence on foreign sources for magnesium.
- 1934** Dr. Wilder G. Penfield, one of the world's great neurosurgeons, became director of the newly founded Montreal Neurological Institute where, under his leadership, many brilliant discoveries were made in the mysterious territory that still surrounds the functioning of the human brain.
- 1934** Food scientists and technologists from industry, the universities, and three Federal Government laboratories, working under the auspices of the Canadian Committee on Food Preservation, started work on the design of refrigerated railway cars, which proved to be quite superior to earlier types. As a result, Canadian railways now operate cars capable of maintaining temperatures of 5°F. with little spatial variation within the car; moreover, the new design eliminates mechanical equipment that would increase maintenance costs and require skilled servicemen at frequent check-points across the country. The group was also successful in applying the 'jacketed' or 'cold-wall' principle to refrigeration in trucks, trailers and freighters.
- 1934-59** The world's first bush aircraft, the *Norseman*, designed and manufactured by Robert Noorduyn at Montreal, was especially useful in opening up the Canadian North; *Norseman* aircraft are favoured by aviators across the world for performance over rugged country. Other Canadian aircraft that achieved world reputation in northern flying, especially for their short take-off and landing ability, are the *Otter*, the *Beaver* and the *Caribou*.
- 1939** Dr. W. R. Franks and his colleagues invented the antigravity suit designed to prevent blackout in fliers when making tight turns or when pulling suddenly out of a power dive. As Wing Commander Franks, the inventor became Director of Aviation Medical Research for the RCAF. Experiments leading to the development of this rubber suit containing fluid to counteract the forces of gravity became invaluable in the subsequent design of various space suits.
- 1945** T. R. Griffith and J. L. Orr (now Research Adviser to the Deputy Minister, Department of Industry) of the National Research Council obtained a patent on the prevention and removal of ice or frost from aircraft parts. The electro-thermal de-icing method developed by these inventors and their associates is now in use on many major airlines and has contributed significantly to flight safety and efficiency.
- 1947** At Chalk River, Ont., the NRX nuclear reactor went into operation. It was then, and so remained for several years, the most powerful research reactor in the world. Canada has continued to play a leading role in reactor design, not only for research but also for the production of radioactive isotopes and for the development of nuclear power.
- 1949** The world's first aluminum highway bridge at Arvida, Que., was designed and built by Aluminum Company of Canada engineers. Today, Canadian-developed processes permit increasing use of aluminum in heavy construction around the world.

- 1950** One of the most dramatic as well as beneficial applications of Canada's nuclear reactor technology was the development of the Cobalt-60 cancer teletherapy unit. Atomic Energy of Canada Ltd. has supplied these units for installation in hospitals all over the world.
- 1953** Dr. R. U. Lemieux, working at the National Research Council's Prairie Regional Laboratory in Saskatoon, Sask., achieved the first synthesis of sucrose. This substance is commercially known as cane or beet sugar and is still the cheapest energy-producing foodstuff. While the synthesis of sugar has no immediate industrial or commercial impact, its scientific value has earned Dr. Lemieux and his group world-wide recognition.
- 1954** The refinery of the Sherritt Gordon mine at Fort Saskatchewan, Alta., commenced operations using the ammonia-leach process worked out by Prof. F. A. Forward and his associates at the University of British Columbia. (Prof. Forward now is Director of the Scientific Secretariat, Prime Minister's Office, Ottawa.) The leaching method eliminates both roasting and smelting by treating the nickel concentrates from the mine with air and ammonia under pressure. The nickel, copper, cobalt and sulphur are dissolved, leaving iron and other impurities in the tailings. The copper is precipitated out of the solution by chemical means and the nickel, treated by hydrogen under pressure, is precipitated as a fine powder. It is noteworthy that this nickel refinery also recovers ammonium-sulphate fertilizers as a by-product, at the rate of some 70,000 tons annually.
- 1954-58** Relocation of Aklavik, N.W.T., to a new townsite, Inuvik, was the largest building research and town planning project ever to be undertaken in the Canadian North. The systematic studies connected with this undertaking revealed, for the first time, the extent to which permafrost can affect northern construction and the safeguards required to counteract the influence of permafrost.
- 195-** Dr. J. F. Morton, then with the Laboratory of Hygiene, federal Department of National Health and Welfare, developed the tissue culture used to produce the polio vaccine. The method, put into operation by the Connaught Laboratories, Toronto, represents a large part of Canada's contribution to the advance of polio immunization.
- 1962** U. V. Helava, working in the photogrammetric research section of the National Research Council's Division of Applied Physics, invented the Analytical Plotter—a revolutionary instrument which ushered in a new era in map-making, surveying and satellite photography. The Plotter substitutes mathematical projection for the mechanical projection on which all other plotters rely.
- 1962** Dr. Neil Bartlett, then an Assistant (now Associate) Professor of Chemistry at the University of British Columbia, achieved world-wide fame when he prepared the first true compound of the rare gas xenon. By successfully combining xenon with another gas to form a stable compound (a reaction previously regarded as impossible) he overthrew a number of existing theories on chemical bonding and also opened up a new field of scientific investigation which may lead to unexpected industrial applications.
- 1962** For the first time, a country other than the U.S.S.R. and the U.S.A. had a satellite in orbit, with the successful launching of Canada's *Alouette*. The satellite is still in orbit (1964), sending a wealth of valuable and reliable data back to the computing centre in Ottawa. Scientists, engineers and technicians of Canada's Defence Research Board share with Canadian aircraft and electronics firms the main credit for this remarkable space venture.
- 1963** G. L. E. Jarlan, working in the National Research Council's hydraulics laboratory, invented the perforated breakwater, a design likely to revolutionize the construction of sea walls. While conventional breakwaters do not permit berthing under heavy wave action, the design dissipates wave energy by a seaward vertical wall that is perforated by large-diameter holes and backed by a wave chamber. The wave entering the chamber is reduced by friction and turbulence; water spilling back out of the holes creates a counter-wave which meets the next on-coming wave and reduces its force. The constant filling and emptying of the chamber reduces the wave action, thus providing a quiet harbour for ships berthed on the opposite side of the structure. The world's first full-scale perforated breakwater was built at Baie Comeau, located on the north shore of the St. Lawrence River about 250 miles east of Quebec City.
- 1963** Automotive engineer John Smeaton developed a two-seater vehicle for use on any terrain or in water and in all extremes of climate. The vehicle, known as *Penguin* and manufactured by Pengor Limited of Carleton Place, Ont., is the latest of a whole family of transport facilities invented by Canadians for travel in the northern bush, e.g., in muskeg country. Thousands of these vehicles, which are light enough to be shipped by air, have been ordered by various industries, government departments, and sportsmen in Canada and abroad.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 77-79, and provincial judiciaries are dealt with briefly at p. 79; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 47-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbridge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 420-422).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital. The death penalty was abolished in relation to the offence of non-capital murder. Also in 1961 the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted. More detailed information is available in the 1962 Year Book, pp. 354-355.

Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, while individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria: (1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1962 there were 42,935 adults charged with 81,181 indictable offences, of whom 38,663 were found guilty of 71,507 offences. In the previous year there were 43,161 adults charged with 81,867 indictable offences, of whom 38,679 were found guilty of 71,262 offences.

1.—Persons Convicted of Indictable Offences, with Ratio per 100,000 Population 16 Years of Age or Over, by Province, 1961 and 1962

Province or Territory	Persons Convicted		Persons Convicted per 100,000 Population 16 Years of Age or Over	
	1961	1962	1961	1962
	No.	No.	No.	No.
Newfoundland	703	905	274	343
Prince Edward Island	42	75	65	114
Nova Scotia	1,383	1,353	297	287
New Brunswick	1,038	1,194	290	327
Quebec	8,064	7,698	245	228
Ontario	13,985	13,764	339	329
Manitoba	2,368	2,191	391	357
Saskatchewan	1,743	1,675	293	282
Alberta	4,012	4,246	477	493
British Columbia	5,092	5,313	465	478
Yukon and Northwest Territories	249	249	1,103	1,092
Canada	38,679	38,663	330	324

At the time of going to press, the classification of indictable offences by type of offence was not available for 1962. Table 2 gives this classification for 1961 offences, compared with 1960. Class I covers offences against the person and in 1961 there were 5,234 males and 299 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1961 there were 315 men and 171 women convicted under federal statutes of whom 290 men and 170 women were offenders under the Narcotic Control Act.

**2.—Persons Charged and Convicted of Indictable Offences, by Class of Offence,
1960 and 1961**

Female Offenders.—There were 3,148 female offenders convicted of indictable offences in 1962 compared with 3,163 in 1961. Of these offenders, Ontario accounted for 1,270, British Columbia 520 and Quebec 430. The ratio of female offenders convicted to total convictions moved downward from 8.2 p.c. in 1961 to 8.1 p.c. in 1962 with a provincial range from 2.7 p.c. in Prince Edward Island to 10.1 p.c. in Manitoba and 9.8 p.c. in British Columbia.

4.—Females Convicted of Indictable Offences, by Province, 1961 and 1962

Province or Territory	Females Convicted		Females Convicted to Total Convictions

Sentences, Method of Trial and Court Proceedings.—Table 8 summarizes the sentences given for indictable offences, Table 9 shows the method of trial and disposition of cases, and Table 10 shows persons charged and convicted of indictable crimes according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community—probation and commitment to an institution. There are several types of institutions to which a person can be committed, such as penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

Subsection 2.—Young Adult Offenders (16-24 Years) Convicted of Indictable Offences

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other reformative disciplines. While young men and women in this age group account for under 15 p.c. of the total population 16 years of age or over, they form over half the criminal population

committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training.

There were 19,839 young adult offenders in 1962 compared with 19,659 in 1961; of the former, 6,051 or 30.5 p.c. were 16 or 17 years of age, 5,285 or 26.6 p.c. were 18 or 19 years of age and 8,503 or 42.9 p.c. were between 20 and 24 years. In 1962, there were 18,620 male and 1,219 female young adult offenders convicted of indictable offences compared with 18,425 and 1,234, respectively, in 1961.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of jury. Such cases are heard in police court with the minimum of delay.

14.—Convictions for Summary Conviction Offences, by Type, 1961 and 1962

Type of Offence	1961	1962	Increase or Decrease 1961-62

Prohibited Parking	1,822,405	1,954,227	+ 7.2
Totals, Convictions	3,109,283	3,296,649	+ 6.0

Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a jury or judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1962 there were 2,301 appeals in indictable cases disposed of by the courts, of which 95 were Crown appeals and 2,206 appeals of the accused. Of the Crown appeals, 34 were from acquittal and 61 from sentence while of the appeals of the accused 822 were from conviction and 1,384 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,703 in 1962. Of these, 187 were appeals of the informant and 1,516 appeals of the accused. The informant appeals comprised 155 from acquittal and 32 from sentence and appeals of the accused comprised 1,394 from conviction and 122 from sentence.

Section 3.—Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on *Statistics of Criminal and Other Offences* and to publish data relating to those under 16 years of age in a report entitled *Juvenile Delinquents*. In 1962, 2,785 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools, or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

Section 4.—Adult Correctional Institutions and Training Schools

Subsection 1.—Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In custody" figures shown in Table 24 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of tickets-of-leave and paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on ticket-of-leave and parole, deaths, pardons and releases on court order. In custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 24 and 25 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1958; totals for training schools and provincial adult institutions have shown a tendency to level off or decline slightly but penitentiary population has increased steadily.

24.—Population in Penitentiaries, Years Ended Mar. 31, 1958-62

Item	1958	1959	1960	1961	1962
	No.	No.	No.	No.	No.

Totals, Training Schools	3,420	3,333	3,388	3,401	3,525

Subsection 2.—The Canadian Penitentiary Service*

The penitentiaries of Canada are administered by the Commissioner of Penitentiaries, responsible directly to the Minister of Justice. In the year ended Mar. 31, 1964, the federal penitentiary system consisted of six maximum security, four medium security and fifteen minimum security institutions, all for males; one prison for women; one maximum security prison camp for males and females of the Freedomite Doukhobor Sect; and two Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two—Collin's Bay Penitentiary and the Joyceville Institution—are within a few miles of Kingston. The other two—the Federal Training Centre and the Leclerc Institution—are close to St. Vincent de Paul.

Eight minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; Blue Mountain near Gagetown, N.B.; and Springhill, N.S. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, St. Vincent de Paul, Collin's Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a minimum security industrial satellite at St. Vincent de Paul.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiary in any part of Canada. Prior to Dec. 1, 1960, it operated as a detached portion of Kingston Penitentiary.

The special security Prison Camp for Freedomites of both sexes who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison.

The two Correctional Staff Colleges—one at Kingston and one at St. Vincent de Paul—are for the advanced training of penitentiary officers. The Kingston College serves English-speaking or bilingual officers and the St. Vincent de Paul College is primarily for French-speaking officers from all parts of Canada. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. During 1962, regional directorates were established at Kingston and St. Vincent de Paul for the Ontario and Quebec areas, respectively. A regional directorate for the western area will start operations in the 1964-65 fiscal year.

Subsection 3.—The National Parole System†

Parole is a means by which an inmate in any institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society, through the rehabilitation of the inmate. The Parole Board is as much concerned with the protection of society as with the reformation of the inmate, and the welfare of an individual inmate must not be allowed to impair the success of the parole system or the protection of the public.

* Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.

† Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

The function of the Parole Board is to select those inmates in the various institutions in Canada who show some indication of a sincere intention to reform and to assist them in doing so by a grant of parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision and subject to restrictions and conditions as to his conduct and behaviour, which are designed for his welfare and for the protection of society. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence, but only with the problem of deciding in each case whether or not there is a reasonable chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if it appears that there is at least a reasonable chance the inmate will lead a law-abiding life.

The National Parole Board is composed of a Chairman and four Members (one woman) and was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959 replacing the former Ticket-of-Leave Act. It has jurisdiction over any adult inmate in any prison in Canada convicted of an offence against an Act of the Parliament of Canada. It also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with the inmate. Reports are also obtained from a psychologist or psychiatrist, when available. Where necessary, a community investigation is conducted to secure as much information as possible about the man's family and background, his work record, and his position in the community. From all these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life. An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, a file is opened and investigation begun, the results of which are presented to the Board for decision.

All applications and reports are processed by the Parole Board staff at Ottawa. In addition to the headquarters staff, there are 24 regional officers stationed in ten regional offices across the country. They interview all applicants for parole to give them an opportunity of making verbal representations to a representative of the Board. The regional officers also submit to the Board reports of interviews and their assessment of the inmates' suitability for parole. These men have authority over the parolees in their respective areas and also give information and counsel to all inmates regarding possibility of parole and preparation for it. They may also issue a Warrant of Suspension and have a parolee arrested and placed in custody if it is necessary to prevent a breach of any term or condition of the parole. They are thus able to exercise effective and adequate control over all parolees in their respective areas.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence while on parole, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence, plus any new term to which he was sentenced for the commission of the new offence.

It is essential that the general public should understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution. The treatment and training program in the institutions is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to reform as many as possible and of giving prisoners a chance to rehabilitate if they seem to deserve it.

During the first five years of its operation the Board reviewed 40,863 cases, including applications for parole and automatic parole review, and granted 10,521 paroles. During the same period the Board revoked 1,033 paroles, which is a general average failure rate over the five-year period of 10 p.c. Of these 1,033 who failed on parole, 532 paroles were forfeited because of the commission of an indictable offence, and 501 were revoked for misbehaviour or the commission of a minor offence.

Section 5.—Police Forces

Organization of Police Forces.—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—each urban centre of reasonable size maintains its own police force or engages the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

The Royal Canadian Mounted Police.—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Minister of Justice and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 121 municipalities. It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 42 subdivisions and 646 detachments. The five remaining divisions are "Headquarters", "Depot" and "N", which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the divisional and subdivisinal units and the four Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1964 was 6,910, including Marine Constables and Special Constables, at which time it maintained some 1,913 motor vehicles, 18 aircraft, 71 ships and boats, 188 sleigh dogs, 22 police service dogs and 220 horses.

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of the laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division is divided into three subdivisions with headquarters at Granby, Hull and Montreal. The Quebec Division is also divided into three subdivisions with headquarters at Chicoutimi, Quebec and Rimouski. There are 107 detachments throughout the province—55 in the Montreal Division and 52 in the Quebec Division. The strength of the Force at the end of 1963 was 1,739 regular members—36 officers, 289 non-commissioned officers, and 1,414 constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each Division is headed by an Assistant Director. A commissioned officer is in command of each subdivision.

Ontario Provincial Police Force.—The Ontario Provincial Police, which has a uniform strength of 3,000, enforces federal and provincial law in those areas that do not maintain a police department and on all Queen's Highways. The Force is administered, from General Headquarters at Toronto, by a Commissioner who has the rank and status of a Deputy Minister under the Attorney General. Other senior executive officers include two Deputy Commissioners, five Assistant Commissioners, and an Administrative Aide to the Commissioner. Under the "Deputy Commissioner-Services" are the Assistant Commissioners in charge of Administration, Staff Services, and Special Services; under the "Deputy Commissioner-Operations" are the Assistant Commissioners in charge of the Field and Traffic Divisions. Specialized departments under Special Services include the Criminal Investigation Branch, Liquor Control, Precious Metals Theft, Anti-gambling, Anti-rackets, and the Auto Theft Branch.

In the field there are 219 detachments controlled through 17 District Headquarters located at Chatham, London, Burlington, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. In addition, there are 40 municipalities policed under contract.

The Force operates one of the largest frequency-modulation radio networks in the world, with 76 fixed radio stations and 778 radio-equipped mobile units, including motorcycles, marine units and a helicopter. Because of territorial peculiarities, the northern districts augment their normal transportation facilities by the use of snowmobiles, swamp buggies, dog teams and a variety of rail transport facilities.

In 1963, in addition to regular constable recruitment, the Force inaugurated its first cadet program, making it possible for qualified young men to create for themselves a career in a long-established police force.

Municipal Police Forces.—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

Uniform Crime Reporting.—A new method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was commenced on Jan. 1, 1962. The program was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting. Historically, the police have kept track of selected statistics to meet their own needs and have been prepared to give an account of crimes in their jurisdictions. However, the definitions and methods for collecting these statistics were not uniform and the data could not be expressed with consistency on a national, provincial or local basis. With the development of the Uniform Crime Reporting Program, meaningful statistical aggregates became possible. The police were

supplied with a manual of instructions containing standard definitions for the reporting of police administration, crime and traffic enforcement statistics on specially designed statistical forms to be submitted to the DBS.

Police Personnel.—As shown in Table 26, full-time police personnel (police, civilian employees, etc.) in Canada numbered 32,478 at Dec. 31, 1962. Police strength was 27,744, civilian employees numbered 4,244, trainees 263 (all municipal police), and other employees 227. Thus, there was a ratio of 1.7 police personnel for every 1,000 persons in Canada; the ratio of policemen alone was 1.5. Police personnel ratios in the provinces ranged from 1.0 to 1.4 per 1,000 persons and policemen ratios from 0.9 to 1.4.

The 12,189 police personnel in 12 selected metropolitan areas included 11,979 municipal police personnel, 203 Royal Canadian Mounted Police under contract and seven provincial police under contract. Municipal police personnel numbered 19,217, made up of 18,231 in municipal forces, 897 Royal Canadian Mounted Police under contract and 89 provincial police under contract.

In 1962, 12 policemen were killed by criminal action and five lost their lives accidentally while on duty. Police transport facilities at the end of the year included 5,008 automobiles, 783 motorcycles, 369 boats, 340 horses and 18 aircraft.

Crime Statistics.—Table 27 shows the number of crimes dealt with by the police in 1962, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; clearances by charge and otherwise; and the number of adults and juveniles charged. Offences known to the police but discarded as being unfounded are not shown in the table but numbered 26,004 under Criminal Code classifications (except traffic) and 10,932 under other statutes (except traffic). Traffic enforcement statistics are given separately at the end of the table.

During 1962, the police reported 36,075 offences committed against the person, including 217 murders, 6,651 cases of rape or other sexual offence, and 29,076 offences of wounding and other assault (not indecent); all offences against the person resulted in the charging of 18,065 persons, 948 of them juveniles. During the year there were 326,401 cases of robbery, theft and other offences against property, with or without violence, resulting in 67,752 persons charged, 19,386 of them juvenile males and 1,004 juvenile females. Other Criminal Code offences included 30,033 cases of fraud, false pretences, forgery, etc., 1,515 offences of prostitution, 2,422 gaming and betting offences and 2,608 offensive weapon offences. Of the 31,138 federal statute offences reported, 770 were under the Narcotic Control Act and 233 under the controlled drugs part of the Food and Drugs Act. These two classifications resulted in the charging of 526 persons, all of them adults.

During 1962, 63,068 Criminal Code offences under traffic enforcement laws were reported and 1,330,726 traffic offences under federal, provincial and municipal statutes. The former resulted in the charging of 46,646 males and 871 females. The number of motor vehicles stolen was 33,758, or 584.5 per 100,000 vehicles registered; 31,237 or 92.5 p.c. of these vehicles were recovered. The number of traffic accidents reported in 1962 was 492,942, of which 3,387 involved fatalities, 77,116 resulted in injuries, 248,591 involved property damage of over \$100 and 163,848 damage of \$100 or less. There were 4,020 persons killed in traffic accidents, including 2,831 drivers and passengers, 1,042 pedestrians, 116 cyclists and 31 others, and there were 106,746 persons injured.

During the year, the police were asked to locate 14,443 missing adults and 20,324 missing juveniles; 13,641 adults and 20,058 juveniles were found. The number of drownings reported by the police was 1,323.

27.—Crime Statistics Reported by Police, by Class of Offence, 1962

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

Until recently, governmental policies relating to Canada's renewable natural resources were directed toward the promotion of settlement on agricultural land and the large-scale utilization of other renewable resources. As a consequence, individual choice and initiative by private citizens was the basis of most action relative to resource utilization, and government programs of resource management and regulation, with some important exceptions, were concerned mainly with the rights and duties of individuals. However, widespread technological changes, particularly in the agricultural and transportation industries, have taken place during the past few decades and there has been a strong trend toward the concentration of an increasing population in urban centres. These changes have been accompanied by a related change in the pattern of land use and such developments, together with evidence of a degree of wind and water erosion and other manifestations of neglect of suitable conservation practices, have indicated the need for considerable planned adjustment in rural areas. Also, the increasing complexity of social organization and the attendant trend toward public decisions respecting resource management and use, have implied the need for improved federal and provincial legislative-administrative organization relative to natural resources.

One of the most important responses to these needs was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and of creating an organizational framework suited to the modern requirement for integrated, comprehensive resource-use planning for social and economic development. Subsequent to this conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis. Previous federal investigations of significance concerned with the general problem of government organization for effective resource use were: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee on Mines, Forests and Waters; and the National Conference on Reconstruction, held in 1945. Notable among provincial government efforts along similar lines is the annual British Columbia resources conference.

*Prepared by D. F. Symington, Information-Education Consultant, Department of Forestry, Ottawa.

Constitutionally, administration and disposition of natural resources rests mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation certain provinces, by agreement, assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resource policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of co-operative federal-provincial programs of resource adjustment and development; and provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development. Aspects of this trend to accommodate legislative-administrative organization to emerging needs will be apparent in the following descriptions of federal and federal-provincial agencies and programs. In addition, a great number of wholly provincial programs have been instituted, which further illustrate the trend toward integration of activities in resource administration.

Federal participation in land and water conservation programs began before the turn of the present century; starting in 1877, this included the work of the now disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. Later, such programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of the drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshlands Rehabilitation Act of 1948, water development projects undertaken under the terms of the Canada Water Conservation Assistance Act of 1953 and, most recently, the broad and comprehensive resource development program for all of Canada envisaged under the Agricultural Rehabilitation and Development Act of 1961. Over this period, many projects have been undertaken, both under these legislative measures and under the terms of reference of the federal and provincial government departments and agencies concerned with resource development. They vary in nature and scope but each has as its basic objective the more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability for the rural areas of the country.

Section 1 gives the currently available data on the land resources of Canada; Section 2 describes the above-mentioned resource development legislation and the results of the implementation of that legislation; Section 3 outlines the organization of the federal and provincial committees established to co-ordinate the work of departments concerned with natural resources; and Section 4 gives brief indication of the federal-provincial programs undertaken by other federal departments and agencies with the same concern.

Section 1.—Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Department of Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1961, less than 8 p.c. is classed as occupied farm land. A great part of the 1,606,788 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forest area is estimated at 275,800 sq. miles.

1.—Land Area classified as Occupied Agricultural or Forest, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1961 Census; areas of forest land were compiled by the Department of Forestry from estimates supplied by the Forestry Service in each province.

¹ Less than half a square mile.

² Included in *Forest Land*; duplication eliminated in the item *Net Productive Land*.

³ Includes areas of recent burn, cut-over or windfall not yet re-stocked.

⁴ Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

⁵ Includes only occupied agricultural land (less forest woodland) plus productive forest land.

⁶ Comprises all other land such as urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock and also unclassified land.

⁷ *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

On the basis of information now available, it is estimated that, in addition to the present arable lands across the country, about 40,000,000 acres of virgin land could be used for arable crops if the need arises. However, most of these reserves will require clearing or reclamation measures before they can be used for agriculture. In addition to the present arable land and potential reserves, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory (p. 433) progresses, a great deal of detailed information will become available on the land resources of the country, their present utilization and their capability.

Section 2.—Federal and Federal-Provincial Resource Development Legislation and Projects

Prairie Farm Rehabilitation Act

The Prairie Farm Rehabilitation Act was passed in 1935 by the Parliament of Canada, to provide for the rehabilitation of areas subject to drought and wind erosion in Manitoba, Saskatchewan and Alberta. A 1937 amendment broadened its scope to include land utilization and resettlement, and a 1939 amendment removed the time-limit so that the Act might remain in force indefinitely.

As originally conceived, the Act provided for assistance in the conservation and reclamation of land and water resources in the southern plains area of the Prairie Provinces. In the main this has consisted of the establishment of community pastures on land sub-marginal for cereal crop production, and the conservation of runoff water by constructing dugouts and damming streams. More recently, the program has been extended to embrace the entire settled agricultural area of the Prairie Provinces and the Prairie Farm Rehabilitation Administration has been made responsible for the development of large-scale irrigation and reclamation projects being undertaken by the Government of Canada. The Administration has also been active in the initiating of the Agricultural Rehabilitation and Development Act program (p. 432) in the four western provinces and has taken over from the Research Branch of the federal Department of Agriculture the operation of the tree nurseries at Indian Head and Sutherland, Sask.

The PFRA is administered from its headquarters at Regina by a Director who is responsible to the Deputy Minister of Agriculture in Ottawa. The following is a résumé of current activities.

Water Development.—A major phase of PFRA activities is provision to farmers of engineering and financial assistance in the construction of individual farm, community and large-scale water storage and irrigation projects. Since 1935 assistance has been provided in the construction of more than 90,000 small dams and dugouts to supply water for livestock, irrigation and domestic use. The PFRA provides all engineering surveys required to plan and design such projects and pays a portion of the construction costs, usually about 50 p.c. but larger proportionately when two or more farmers act together to develop water resources. Applications for large water projects are considered individually by PFRA and if approved are constructed under an agreement between the Federal Government and the provincial or local government concerned; PFRA builds the projects and other government bodies operate them. Six irrigation projects in southern Saskatchewan are owned and operated by PFRA, as are the Bow River Irrigation Project northwest of Medicine Hat in Alberta, and the Predevelopment Irrigation Farm associated with the South Saskatchewan River Development Project near Outlook in Saskatchewan. The projects in southwestern Saskatchewan and in Alberta, originally developed as part of the Federal Government's resettlement and rehabilitation program, now serve 160,000 acres of land and provide direct benefits to about 1,000 farmers.

Four to eight million trees are distributed annually to prairie province farmers for farmstead and field shelterbelts; annual production of trees will be increased to 15,000,000 by 1965.

Major Projects.—Where a special need exists, the costs of such projects are usually shared by the federal and provincial governments and PFRA provides engineering services and supervises construction. Examples of major projects undertaken are as follows.

St. Mary Irrigation Project.—The St. Mary Irrigation Project, jointly undertaken by the Federal Government and the Government of Alberta in 1946, is intended to provide water to irrigate 500,000 acres of land between Lethbridge and Medicine Hat. Three important international streams are involved—the St. Mary, the Belly and the Waterton Rivers. The Federal Government is responsible for construction of the main water storage and supply facilities, and the Alberta Government for the irrigation distribution system and agricultural development. A key structure, the St. Mary Dam, was completed in 1951; the diversion of the Belly River into the St. Mary Reservoir was completed in 1958; and the diversion of the Waterton River to the same reservoir via the Belly River Diversion is planned for completion in 1964. Present facilities extend irrigation to 296,000 acres of land, and the Waterton River water will irrigate the other 214,000 acres.

South Saskatchewan River Development Project.—In 1958 the Federal Government and the Government of Saskatchewan reached an agreement to begin construction on a large multi-purpose project which would enable better use to be made of the water resources of the South Saskatchewan River through irrigation, power development, urban water supply, recreational development and improved river control. The project includes the building of two dams—the major one between the towns of Outlook and Elbow and the other adjacent to the divide between the South Saskatchewan and Qu'Appelle Valleys. The cost of all construction associated with the creation of the reservoir will be shared by the federal and provincial governments at a ratio of three to one, the provincial share not to exceed \$25,000,000. The Federal Government provides all engineering, supervisory and administration requirements.

When completed, the project will provide water for the irrigation of about 500,000 acres between Elbow and the city of Saskatoon, and in the Qu'Appelle Valley. Power potential at the damsite is 475,000 kwh. The reservoir—140 miles long with a capacity of 8,000,000 acre-feet of water (usable storage of 2,750,000 acre-feet)—will cost an estimated \$100,000,000 to construct. The main dam—210 feet high and with an over-all length of 16,700 feet—will be the largest rolled-earth dam in Canada and one of the largest in the world. By the spring of 1964 expenditures on this project had amounted to \$70,000,000.

Northwest Escarpment and Interlake Reclamation Project.—By agreement between the Federal Government and the Manitoba Government, certain flood control and land reclamation projects may be jointly undertaken. Investigation and reclamation work has been done to overcome flooding and erosion problems in the Riding, Duck and Porcupine Mountain areas and the Whitemud watershed, consisting of stream channel improvement, dyking, stream bank erosion control and building cutoffs and diversions. However, since 1958, work has been mainly confined to studies in the Wilson Creek headwaters area, and to completion of the reclamation projects on the Fairford and Icelandic Rivers of the Interlake region.

Assiniboine River Reclamation Project.—Flooding problems along the Assiniboine River between Portage la Prairie and Headingley in Manitoba have, over the years, caused damage to farm land, buildings and other property. Flood protection work, which has been carried on for many years, has consisted mainly of dyke construction and channel improvement; however in 1962 an agreement was signed between the governments of Canada and Manitoba for major flood control measures, including a large-scale flood control and water conservation reservoir on the Assiniboine River near Shellmouth, and the construction of a diversion canal near Portage la Prairie to carry Assiniboine River floodwaters to Lake Manitoba; construction of the main dam will begin in 1964.

Community Pasture Program.—The conversion of submarginal land from cereal crop production to pasture has been considered one of the necessary adjustments in land use in the drier areas of the Prairie Provinces. The 1937 amendment of the Act enabled PFRA to withdraw such land from cultivation and assist farmers to move to better areas.

Since then, 75 pastures have been developed, comprising some 2,250,000 acres of land providing controlled summer grazing for 150,000 head of cattle owned by more than 7,500 patrons. Current pasture development under PFRA, and under the cost-sharing Agricultural Rehabilitation and Development Act program, is based on the need to diversify production as a means of improving the position of low income farmers.

Maritime Marshland Rehabilitation Act

The MMRA program was instituted in 1948 by federal legislation to assist Nova Scotia, New Brunswick and Prince Edward Island in preserving and developing tidal marshlands, mainly in the Bay of Fundy area. The Federal Government constructs the protective works and the provinces make arrangements with land owners, provide drainage ditches and encourage proper use of the land. In all, 123 areas totalling more than 81,000 acres have been protected by 250 miles of dyke and 437 aboiteaux, or tidal dams.

One of the modern engineering techniques employed by the MMRA involves construction of large dam structures near the mouths of tidal rivers. These permanently reclaim the lands along such rivers, provide highway crossings and eliminate the continual change in stream-bed location which is characteristic of tidal rivers. The three major structures are: Shepody Dam, completed in 1955 at a total cost of \$1,573,000, provides protection of a permanent nature to some 5,500 acres of fertile marshland from saltwater flooding and has reduced maintenance costs to only a fraction of what they were; Annapolis River Dam, completed in 1960 at a total cost of \$2,500,000 (\$915,000 paid by the Province of Nova Scotia) is a multi-purpose project providing a much needed highway crossing and protection of about 4,300 acres of rich farm land from saltwater flooding; and Tantramar River Dam, completed in 1960 at a total cost of \$905,000 (\$201,000 paid by the Province of New Brunswick) protects about 18,000 acres of marshland from flooding and provides a crossing over the Tantramar River for the Trans-Canada Highway.

The conservation problems which were the original basis for the MMRA have been largely overcome and, since the inception of the Agricultural Rehabilitation and Development Act program in 1961, the MMRA Administration has functioned in part as a regional ARDA office, and at the request of the provinces has provided engineering assistance on soil and water conservation problems in 37 areas of the Maritime Provinces.

Canada Water Conservation Assistance Act

This Act was passed in 1953 to enable federal participation up to 37.5 p.c. of the cost of construction of dams and other major water conservation and control projects. To date (mid-1964) only Ontario has participated, its three projects being the Ausable River Conservation Program, the Upper Thames River Conservation Program and the Metropolitan Toronto and Region Conservation Program. The over-all cost is estimated at \$34,500,000, of which the Federal Government has agreed to provide a maximum of about \$13,000,000. To Mar. 31, 1964, the Federal Government had contributed \$2,800,000.

Agricultural Rehabilitation and Development Act

The Agricultural Rehabilitation and Development Act was proclaimed in June 1961 and is an important element in Canadian agricultural policy and renewable resources management policy at both national and provincial levels. The Act authorizes the Federal Government to enter into agreements with provincial governments for the joint undertaking of: (1) projects for the alternate use of lands classed as marginal or of low productivity; (2) projects for the development of income and employment opportunities in rural agricultural areas; (3) projects for the development and conservation of soil and water resources; and (4) projects for research relative to the foregoing. Discussions with the provincial governments, beginning in 1961, resulted in the signing, by October 1962, of a general ARDA agreement between the Federal Government and all provincial governments. The General Agreement, operative until 1965,* provides a more detailed interpretation of the Act and establishes an operating policy.

* The first Federal-Provincial Conference on ARDA, held Nov. 26-27, 1964, resulted in the acceptance of a new General Agreement to come into effect Apr. 1, 1965, covering ARDA operations until 1970; the total federal contribution was raised from \$50,000,000 to \$125,000,000.

The ARDA legislation arose out of recognition of a national interest in achieving better land use, improving the viability of farm units which are at present uneconomic, and of improving income and employment opportunities in rural areas. In many rural areas of Canada, income and living standards are unacceptably low and present land use is faulty or inefficient. To some considerable degree these economic, social and conservation problems, which interact to produce an adverse effect on rural standard of life, arise from farm mechanization; the more efficient, highly mechanized farmers, with adequate land and operating capital, are able to maintain profitable farming operations notwithstanding a relatively low market price for farm produce and the operators of smaller, less mechanized farms are thereby placed at a severe disadvantage. As a result, the number of farms in Canada has decreased since 1931 from about three quarters of a million to fewer than half a million and the trend toward farm consolidation and abandonment is continuing.

The Agricultural Rehabilitation and Development Act is enabling legislation, intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development. It is intended to aid in the correlation and expansion of existing programs, and to fill substantial gaps where current programs do not meet present needs. It has been clearly recognized that, in addition to improved conservation and resource utilization and general economic stimulation, a social process of community development is essential—a process whereby local citizens organize to bring together local institutions and employ the technical counsel of university, professional and governmental agencies to study their physical and economic resources and the capabilities of the people; subsequently developing comprehensive economic and social plans to be implemented co-operatively by all levels of government and private organizations.

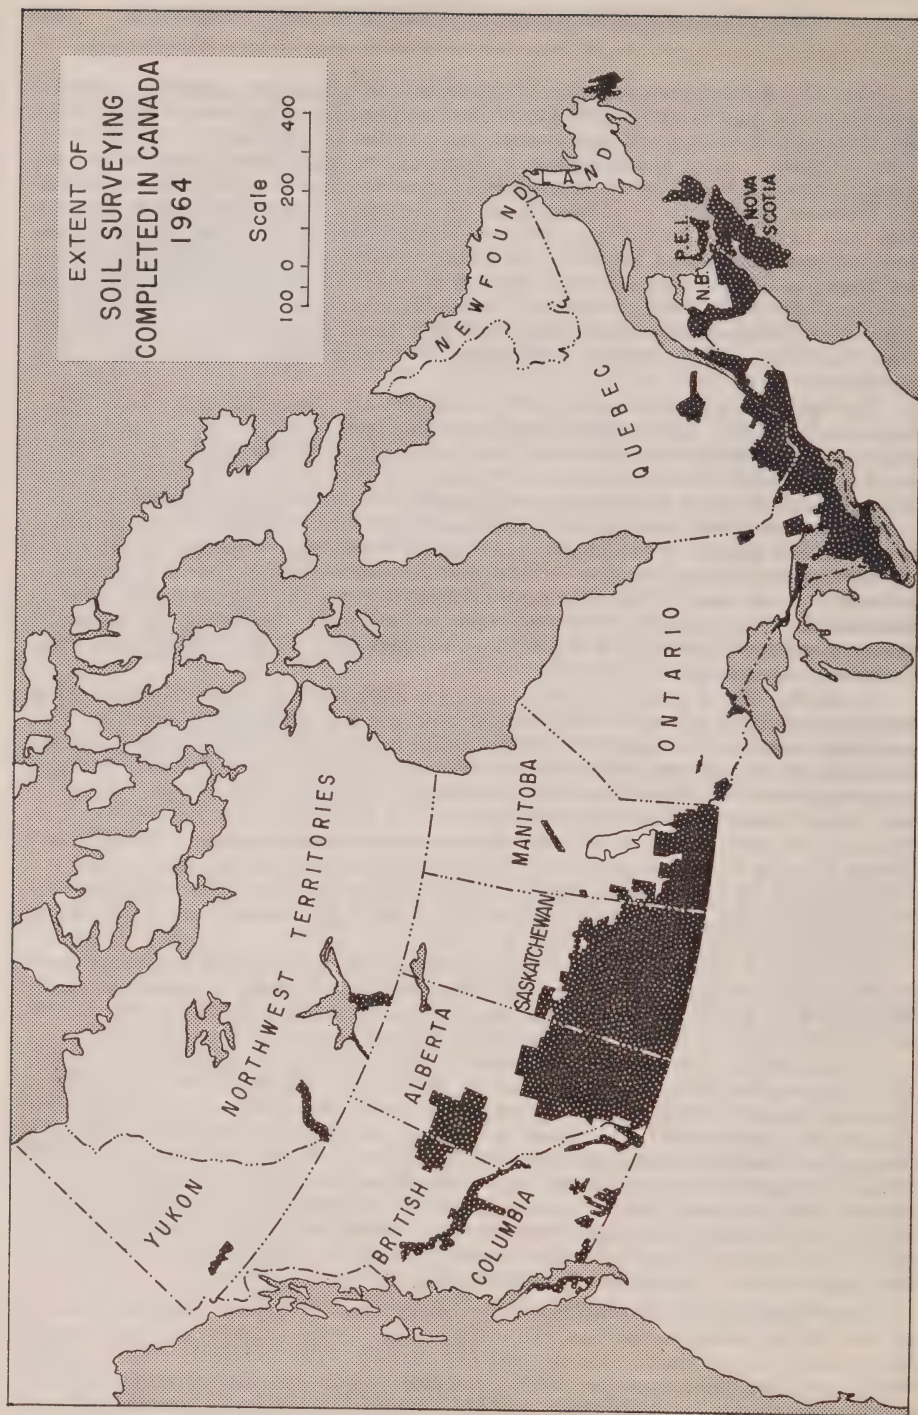

Under the ARDA program up to the spring of 1964, seven Rural Development Areas had been designated as areas in which intensive programs of social and economic development and resources development would be undertaken: Meadow Lake, Torch River and Broadview in Saskatchewan; the Interlake District in Manitoba; the Abitibi-Témiscamingue area and the Gaspé-Lower St. Lawrence-Îles de la Madeleine area in Quebec; and Prince County of Prince Edward Island. Ten Rural Research Regions had been designated as areas for intensive, comprehensive research relative to rural development: Census Division 16 in Saskatchewan; 11 counties in eastern Ontario; the Rouge River Valley and the Brome-Stanstead area of Quebec; northeastern New Brunswick; the Nova Scotia North Shore; and, in Newfoundland, the areas of St. Barbe-Coast, St. Andrews-St. George, Fogo-Bonavista, and South Avalon.

At the end of ARDA's first full year of operation, Mar. 31, 1964, 368 federal-provincial projects had been approved. The total estimated cost of these projects was nearly \$23,627,000, of which the Federal Government's share was approximately \$12,401,000. In addition, 24 purely federal projects, mainly research, cost an estimated \$299,000.

Typical of the major ARDA soil and water conservation and alternate land use projects were: stream channel improvement over 10 miles of the Rivière Noire watercourse of Quebec to reclaim 1,700 acres of land for the benefit of 1,480 farmers, at a cost of \$247,000; acquisition of submarginal agricultural land in eight north-central Ontario counties and districts for forestry, recreation and wildlife purposes, at a cost of \$1,689,000; reconstruction of the Grassmere Drain in Manitoba to provide drainage for 182 sq. miles of good agricultural land; the Good Spirit Community Pasture in Saskatchewan, developed at a cost of \$713,000; agronomic and engineering studies related to irrigation in Alberta, at a cost of \$783,000; and in British Columbia the rehabilitation of eight irrigation districts at a total cost of \$622,000 to preserve 15,000 acres of good agricultural land.

The Canada Land Inventory.—The Canada Land Inventory being co-ordinated by the ARDA Administration has been made possible by the extensive soil classification work undertaken in Canada over the past half-century. The co-operative Soil Surveys, which have been under way since 1935, are staffed by soil specialists of federal and provincial governments and universities and are supported by all senior governments.

EXTENT OF
SOIL SURVEYING
COMPLETED IN CANADA
1964

For several decades the Soil Surveys have been classifying and mapping land according to its inherent characteristics. Most of the agricultural areas have been mapped at varying scales and degrees of intensity, and maps and reports have been published providing much fundamental information on Canadian soils. Although designed to meet the needs of the agricultural industry, the Surveys provide information that can often be used as a basis for assessment of the capability of land for various possible alternative uses. A second type of land classification, according to its present use, has been carried out over much of Canada, particularly by means of the land-use mapping program of the Geographical Branch of the federal Department of Mines and Technical Surveys which began in 1950. The Dominion Bureau of Statistics, the Economics Division of the Canada Department of Agriculture, and the statistical agencies of the province also provide information on the social and economic factors of land use.

The Canada Land Inventory carries out a third type of land classification—according to its assessed capability for different uses. Increasing competition for the use of land has led to recognition by governments of the need to assess land capability and apply this information to land-use policy and programs. On the basis of much fundamental work in classifying and mapping soils, gathering climatic data, studying present uses, and compiling statistics on productive capacity, it is now possible for scientists in the fields of agriculture, forestry, recreation and wildlife to rate the capability of land, employing classification systems that provide a basis for effective land-use planning in Canada. In October 1963, the Canada Land Inventory was approved as a means of accomplishing this; the Inventory is being planned and implemented co-operatively by the Federal Government and all provincial governments individually with the ARDA Administrations functioning as co-ordinators. The Federal Government will reimburse each province for all additional costs it incurs in the conduct of the Inventory.

The broad objective of the Canada Land Inventory is to classify lands in and adjacent to the settled portions of Canada as to their use capabilities, and to obtain a firm estimate of the extent and location of each class. These lands would be classified according to: their physical capabilities for use in agriculture, forestry, recreation and wildlife management; their present use; and socio-economic factors relative to their present use. This vast amount of information is to be gathered, stored on computer tapes, analysed and published in such a way that the Inventory will become a working tool in resource use and rural development programs across Canada.

During 1963 and 1964, the federal and provincial ARDA organizations have established co-ordination among the approximately 100 agencies of the 11 senior governments which are concerned with the Inventory, and with the numerous universities, non-governmental organizations, and private companies and individuals who are participating in the Inventory. A nation-wide inventory of soil capability for agriculture and forestry is under way, and planning for the other sectors—recreation and wildlife—is proceeding.

Section 3.—Federal and Provincial Co-ordinating Committees

During the two-year period of preparation for the "Resources for Tomorrow" Conference of October 1961, the Federal Government and all provincial governments established interdepartmental committees of departments concerned with natural resources. Subsequent to the Conference, most of these committees continued—usually in an altered form—to meet the newly emerging need for co-ordination among departments for the implementation of the ARDA program. The committees are as follows.

Federal Government.—The Federal Interdepartmental Co-ordinating Committee, comprised of the Ministers of eight departments—Agriculture, Forestry, Fisheries, Finance, Labour, Industry, Citizenship and Immigration, and Northern Affairs and National Resources. The Interdepartmental Advisory Committee for ARDA, comprised of the Deputy Ministers of these Departments. In practice, co-ordination in detail is achieved through sub-committees or *ad hoc* committees.

Newfoundland.—ARDA Co-ordinating Committee, comprised of four Deputy Ministers of the resource departments and education.

Prince Edward Island.—The Ministerial Committee for ARDA, comprised of the Premier and Ministers of the resource, education, tourist development and municipal affairs departments. The Deputy Ministerial Committee for ARDA, comprised of the Deputy Ministers of resource and education departments. County ARDA Committee.

Nova Scotia.—The Resources Development Co-ordinating Committee, comprised of four Deputy Ministers of the agriculture, municipal affairs, lands and forests and attorney general departments, and four senior officials. The Inter-departmental ARDA Committee, comprised of 21 senior officials of the resource, planning and social service departments, ARDA Departmental Committees of the departments of agriculture and lands and forests.

New Brunswick.—Provincial ARDA Committee, comprised of eight Deputy Ministers of the agriculture, lands and mines, fisheries, industry, labour, public works, municipal affairs and youth and welfare departments, the General Manager of the Electric Power Commission, an officer of the Research and Productivity Council, an economic adviser, and two federal officials as consultants.

Quebec.—An interdepartmental committee composed of five Ministers; the ARDA Administration; the Permanent Committee for Resource Development, composed of the Minister of Agriculture and Colonization and the Deputy Ministers of Agriculture and Colonization, Industry and Commerce, Natural Resources, Tourism, Hunting and Fishing, Lands and Forests, and Municipal Affairs; the Economic Planning Council of Quebec, composed of five regular and five associate members selected from the senior officers of the government.

Ontario.—An ARDA Directorate established under the Agricultural Rehabilitation and Development Act of Ontario (1962-63) consists of ten Deputy Ministers or senior officers from seven departments and the University of Guelph. The Directorate reports to the Government of Ontario through the Minister of Agriculture.

Manitoba.—The Manitoba Development Authority is comprised of the Premier, four Ministers, five Deputy Ministers and an Executive Secretary. A Deputy Ministers' Committee on Rural Development and ARDA. A Technical Committee to carry out the instructions of the Deputy Ministers' Committee. Advisory Committees to the Deputy Ministers on Rural Development, Land Use and Soil and Water Conservation.

Saskatchewan.—The Committee on Agricultural and Renewable Resources Development, comprised of the Deputy Ministers of the Departments of Agriculture, Natural Resources, Municipal Affairs and Education, and a representative of the Water Resources Commission. The Committee is chaired by the Secretary of the Economic Advisory and Planning Board.

Alberta.—The Alberta ARDA Co-ordinating Committee, comprised of the Deputy Ministers of four resource departments, the Director of Lands, and the ARDA Co-ordinator. The Alberta ARDA Advisory Committee, comprised of 14 senior provincial officials of various resource departments and two federal officials.

British Columbia.—The Ministerial Committee for ARDA, comprised of three Ministers representing five natural resources departments. Deputy Ministers Committee for ARDA, comprised of the Deputy Ministers of five resource departments.

Section 4.—Other Federal Resource Agencies and Their Federal-Provincial Programs

The Department of Northern Affairs and National Resources.—This Department engages in many diverse activities including administration of national parks, some of the aspects of water resources under federal jurisdiction, administration of the resources of the Yukon and Northwest Territories, wildlife administration (particularly the Migratory Birds Convention Act) and administration of other natural resources under federal jurisdiction. The Water Resources Branch, the National Parks Branch and the Northern Administration Branch, in particular, deal with natural resources and administer the federal-provincial agreements and programs, which are as follows. *Roads to Resources Agreements:* made with all provinces between 1958 and 1960, involve construction of access roads mainly to mining, lumbering and tourism areas; total federal expenditure to 1964 was approximately \$53,000,000, matched by equal provincial expenditure. *Canada Water Conservation Assistance Act* (see p. 432). *Fraser River Board:* established in 1949 to study flood control, hydro development, etc. The Federal Government has spent

about \$1,800,000 on research and other activities to date; British Columbia has spent a similar amount.* *Columbia River Agreements*: signed in 1963 and 1964 to define the rights and obligations to British Columbia under the Columbia River Treaty and related arrangements. *Prairie Provinces Water Board*: comprised of one member from each of the Prairie Provinces and two members from the Federal Government; its function is to recommend water allocation from interprovincial streams to each province. *Nelson River Investigation*: established in 1963 to study power sites on the river and the means of achieving their development. The Nelson River Programming Board and Administrative Committee, the former comprising three federal and three Manitoba members and the latter two members each, have completed preliminary engineering studies of power potential of the system at a cost, up to Mar. 31, 1964, of approximately \$500,000 to the Federal Government and a similar amount to Manitoba. *Greater Winnipeg Floodway Program*: an agreement with Manitoba in 1962 provides for the construction of a floodway for the Red River, to extend from St. Norbert past Lockport, at a cost to the Federal Government of nearly \$37,000,000 and a total cost of about \$63,000,000. *Ottawa River Engineering Board*: established to conduct joint hydrologic studies by the Federal Government, Ontario and Quebec of the storage and regulation possibilities in the Ottawa River Basin from the viewpoint of all interests affected, including uses for power, logging, navigation, municipal use, etc. *Study of Flood Flows*: established in 1964 between Nova Scotia and the Federal Government for a one-year program to study the size, location and frequency of flood flows in Nova Scotia watercourses.† *Hydrometric and Sediment Survey*: beginning in the 1930's this program, varying between provinces, provides for sedimentation and hydrometric studies in most provinces. *Grand Rapids Habitat Study*: involves examination of the Moose Lake area of Manitoba on the effect of the Grand Rapids dam on wildlife habitat, particularly that of muskrat and migratory birds. *Fur Conservation Agreements*: established between the Federal Government‡ and Ontario, Manitoba and Saskatchewan for the construction of water control works to improve management of fur bearing animals, chiefly muskrat, in marshland areas. *Wildlife Inventory Program*: joint studies are carried out informally, e.g., the waterfowl inventory conducted by the Federal Government, the United States Fish and Wildlife Service, the Prairie Provinces and the Provinces of British Columbia, Ontario and Newfoundland, and the caribou inventory by the Federal Government and the governments of Saskatchewan, Manitoba, Quebec and Newfoundland. *Trans-Canada Highway Campgrounds and Picnic Areas Program*: established in 1958 between the Federal Government§ and all provinces except Ontario and Quebec to provide improved tourist facilities, with the Federal Government sharing costs equally to a maximum of \$2,000,000; \$919,000 had been spent by 1963.

The Canada Department of Agriculture.—This Department is concerned with physical and economic research relative to the agricultural industry, grading and inspection, disease and pest control, soil and water conservation, marketing, farm credit and other related activities. Federal-provincial natural resources agreements administered by the Department, additional to certain PFRA and MMRA agreements, are as follows. *Soils Survey*: a cost-sharing program conducted co-operatively since 1935 with most of the provinces to classify soils according to their physical characteristics, to assess their usefulness for agriculture, and to publish the information in the form of maps and reports. A number of universities are actively involved in the program (see p. 435). *Lime Assistance Program*: an annual agreement applicable to British Columbia, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland, beginning in 1943, to reduce acidity of agricultural soils by application of limestone or other alkali material. Federal contributions have amounted to about \$16,770,000 since inception. *Land Clearing and Bogland Reclamation*: a joint federal-Newfoundland program to develop

* The Department of Northern Affairs and National Resources participates in the East Slope and Pembina River programs; the Departments of Transport and Forestry also participate in the East Slope program.

† The Federal Department of Transport is also participating in this study.

‡ The Indian Affairs Branch of the Department of Citizenship and Immigration is also involved in these agreements and works.

§ The Department of Labour Winter Works Program is also involved in this program.

Newfoundland's extensive boglands and arable forest lands for crop and pasture use and for gardens. Since it began in 1953, the federal contribution has been \$1,100,000 matched by the province. This program is being carried forward under ARDA.

The Department also participates in the East Slope (Alberta) Watershed Research program, the Greater Winnipeg Floodway program, and the International Pembina River Engineering Board.*

The Department of Mines and Technical Surveys, the Atomic Energy Commission, the National Research Council and the Fisheries Research Board.—These departments and agencies, in co-operation with the Ontario Government, the federal Department of Fisheries, the University of Toronto, the United States National Science Foundation, and private sources, support the Great Lakes Institute in its comprehensive program of research on the Great Lakes fisheries problems and other relevant problems. The Institute, together with the international Great Lakes Fisheries Commission (relative to lamprey control), co-operates in work under an agreement made in 1960 between the Federal and Ontario Governments to fulfil the recommendations of the federal-provincial Great Lakes Fisheries Co-ordination Committee. The Federal Government conducts general fisheries research and lamprey research and control on Lake Superior, and economic and technological studies on all the Great Lakes. Ontario conducts general fisheries research on lakes Huron, Erie and Ontario, collects data and does hydrographic work. A number of other federal, provincial and non-governmental agencies support the Institute in various ways. Co-ordination is achieved through the federal-provincial Committee for Ontario Fisheries.

The Department of Fisheries.—This Department is responsible for administration of the Fisheries Act which, by agreement with Alberta, Saskatchewan, Manitoba, Ontario and Quebec, is applied by provincial administrations of these provinces. The Department of Fisheries is the federal body which, with the research and co-ordination assistance of the Great Lakes Fisheries Institute, fulfils the federal commitments under the federal-Ontario agreement of 1960.

The Department of Transport and the Department of National Health and Welfare.—These departments extend assistance in various forms to provincial and municipal governments for the study and abatement of air pollution. They have, in co-operation with municipal and provincial organizations, established an air sampling network to collect data on pollutants in urban centres and correlate it with meteorological data.

The Department of Citizenship and Immigration.—In general, the federal-provincial agreements in which this Department participates concern wildlife as a factor in Indian income opportunities. The agreements include: the Sipanok Fur Area agreement, which is mainly concerned with muskrat production; the Fur Conservation Agreements with Ontario, Manitoba and Saskatchewan† under which several million dollars have been spent in joint conservation programs; the federal-Ontario resources management program for the Bruce Peninsula; a federal-Ontario agreement whereby the Ontario Government operates a fur farm on Akimiski Island of James Bay on behalf of the Northwest Territories Council and the Indian Affairs Branch; the Beckwith Island grouse study in Georgian Bay; and various projects for industrial development of resources (particularly fish) in the interest of Indian communities.

The Department of Forestry.—This Department is concerned primarily with promoting effective management of Canada's forest resources and improving wood utilization, and to these ends conducts comprehensive programs of research and undertakes, promotes and recommends measures to encourage application of desirable methods. In

* The Department of Fisheries is also a member of the Fraser River Board.

† The Department of Northern Affairs and National Resources is also a party to this agreement.

addition to the federal-provincial resource agreements under ARDA, the Department of Forestry is responsible for federal administration of joint programs as follows. *Composite Forestry Agreements*: beginning in 1951 and in 1960 provided for in the Department of Forestry Act, the agreements cover federal assistance in five areas of forestry—inventories, reforestation, fire protection, access roads and trails, and forest stand improvement. The annual allotment provided by the Federal Government is \$7,910,000, allocated between provinces according to a formula based on productive forest area. *Forest Stand Improvement Program*: established under federal-Nova Scotia agreement in 1961 for the improvement of Cape Breton Island forest stands and to provide employment for coal miners affected by mine closures. *Eastern Rockies Forest Conservation Area*: a 25-year federal-Alberta agreement beginning in 1947 and revised in 1951 and 1957 provided for conservation of 9,000 sq. miles of forest on the headwaters of the Bow, Crowsnest and Clearwater Rivers, to ensure maximum water flow in the Saskatchewan rivers. The Federal Government provided the capital costs of \$6,200,000, and the province maintains the projects. *Fire Protection Arrangements*: include federal-Alberta agreements for fire detection and suppression in the Rocky Mountains Forest Reserve and similarly on the boundary areas of Waterton Lakes, Banff, Jasper and Wood Buffalo National Parks. *Forest Research Agreements*: include federal-Ontario agreements for forest research, under an advisory committee composed of five federal and five provincial members, to develop experiments and test procedures; operation of the Forest Insect Laboratory at Sault Ste. Marie and the Forest Pathology Laboratory at Maple, Ont. *Budworm Spraying Program*: established in 1953 as a means of controlling spruce budworm infestation by a spraying program conducted by Forest Protection Ltd., a federal-provincial-industry organization composed of four pulp and paper companies, the Government of New Brunswick and the Federal Government. More than 20,000,000 acres have been sprayed at a total cost of more than \$15,000,000, of which the Federal Government has contributed \$5,000,000.

AGRICULTURE IN THE CANADIAN ECONOMY, 1964*

In the past quarter-century, the relative importance of agriculture as a primary industry in the Canadian economy has declined, although it has not declined in absolute terms. The gross domestic product (GDP) is probably the most useful statistic for measuring the contribution of the various industries to the economy. In the period 1935-39, the GDP at factor cost, that is, the value of all goods and services produced in Canada from domestic materials, averaged \$4,534,000,000, of which agriculture contributed an average of \$488,000,000 or 11 p.c. By 1962, the total GDP had reached \$35,931,000,000 but the proportion contributed by agriculture, although over four times greater in value than in 1935-39, amounted to only 5.5 p.c. of the total. The annual rate of growth in agriculture has been much less than that for other industries, averaging about 1 p.c. since 1935-39 compared with a rate of growth of 4.4 p.c. in the goods-producing industries, of 4.5 p.c. in the service industries and of 4.7 p.c. in the commercial industries. The highest growth rate in the past quarter-century has been in the electric power and gas utilities industries—over 8 p.c. annually.

As a primary industry, then, agriculture contributes 5.5 p.c. to the total GDP but its importance to the national economy does not end there. Agriculture is a large consumer of industrial products such as fertilizers and machinery; farmers are large borrowers of capital; the movement of agricultural products to the factories and export markets provides a great volume of business for transportation companies; agricultural processing industries provide employment for many industrial workers; and agricultural exports contribute much to Canada's balance of payments in international trade.

*Prepared in the Economics Division, Canada Department of Agriculture, Ottawa.

Farm Land and Farm Labour.—The area of occupied farms in Canada in 1961 was 172,600,000 acres, representing 7.6 p.c. of the total land area of the country including the Yukon and Northwest Territories. Excluding the Yukon and Northwest Territories and Newfoundland, where the amount of arable land is minimal, the occupied farm land amounts to 13.8 p.c. of total land area. By comparison, the total occupied productive forest land amounts to about 194,000,000 acres, exclusive of farm woodlots.

Among the provinces, Prince Edward Island has the greatest proportion of its land area in farms—two thirds of the total—and Saskatchewan follows with 46 p.c. in farms. Conversely, farm land constitutes a very small proportion of the total land area in Newfoundland and amounts to less than 5 p.c. in both British Columbia and Quebec. The average size of the 481,000 farms in Canada in 1961 was 359 acres, about one fifth larger than the average size in 1956. As may be expected, the farms in the grain-growing prairie region were the largest, averaging over 600 acres, and those in the mixed farming region of Central Canada (Ontario and Quebec) were the smallest, averaging 151 acres.

More than 2,100,000 people were living on farms in 1961, representing about 12 p.c. of the total population and 38 p.c. of the rural population; in 1931, almost one third of Canada's population lived on farms. Today, the number of persons living on farms averages just over four per farm, ranging provincially from 3.3 persons in Saskatchewan to 6.3 in Newfoundland, 6.1 in Quebec and 5.4 in New Brunswick.

The farm labour force in 1961 averaged about 674,000 persons, 11 p.c. of the total employed labour force. By 1963, this average had declined to 641,000 persons or 10 p.c. of the total. On the other hand, although the total farm labour force is constantly declining, the numbers of hired farm workers have remained relatively stable, averaging 100,000 in 1961 compared with 101,000 in 1963. It is interesting to note that the greatest decline in the farm labour force since 1946 has been in the family help group; the number of family workers, other than farm operators, has decreased 61 p.c. as compared with a decrease of 41 p.c. in the number of farm operators. The decrease in hired labour has been 31 p.c. in the same comparison. However, agriculture still provides employment for more than three times as many workers as all other primary industries combined. As an industrial group, it ranks fourth in importance as an employer, after manufacturing, service (excluding government) and trade.

The decreased employment in agriculture reflects the very greatly increased efficiency of farm labour. In the 1935-39 period, 11 persons were supplied with foodstuffs and fibre by the production of one farm worker; by 1946 the ratio had risen to 13 persons and by 1963 to 33. Thus, output per farm worker, in terms of the number of persons supported, is now three times that of the prewar level. In fact, the main characteristic of Canada's postwar agricultural "revolution" has been the ever-decreasing number of farm workers required to supply foodstuffs to the ever-increasing number of consumers, a natural result of the increased use of mechanical power and such other aids to production as chemical fertilizers and weed and insect controls. In addition, improved breeding and feeding of livestock, improved crop varieties and better farm practices have greatly increased over-all efficiency in the use of agricultural resources since prewar. The average annual milk production per cow, now at 6,500 lb. or more, is up by over 60 p.c. The average rate of lay of all poultry flocks is up from 140 eggs per layer to almost 200. In 1941, 6 lb. of feed were needed to produce a pound of gain in poultry meat production but a conversion rate of 2.5 lb. or better is common today. Grain corn yields are up over 50 p.c.; the average yield per acre in Ontario in 1932-41 was 41 lb. but in the past ten years the average has been 63 bu. an acre.

Farm Financing.—The capital investment in farming is large, amounting to an estimated \$12,400,000,000 or \$19,000 per worker; 64 p.c. of this is in real estate, 19 p.c. in machinery and equipment and 17 p.c. in livestock. New capital formation in agriculture exceeds \$700,000,000 annually, 9 p.c. of the total for all industries.

Investment capital finds an important outlet in agriculture, both for short-term lending and for longer-term capital projects. Interest payments on farm indebtedness

are estimated to amount to more than \$70,000,000 annually. The major sources of long-term credit extended to farmers are federal and provincial government agencies and individuals. Loans approved by the federal Farm Credit Corporation in the year ended Mar. 31, 1964 exceeded \$108,000,000. Loans of intermediate-term length may be obtained by farmers from a number of sources but are mainly received through the chartered banks under the Farm Improvement Loans Act; lendings under that Act reached a total of \$136,000,000 in 1963, about three quarters of which went into the purchase of equipment. Short-term credit, mainly for production expenses, constitutes the largest volume of farm borrowings and is the most expensive. The chartered banks, farm machinery dealers, feed and fertilizer firms, credit unions and oil companies are all important sources of short-term farm credit.

Commercial Farming and Specialization.—While the individually owned and operated farm is still the predominant form of farming in Canada and is likely to remain so for most farm enterprises, there has been a notable trend toward specialization and commercial development, particularly in the more densely populated areas, and farms generally have progressed a long way from the subsistence organization of pioneer days or even the stage of development reached in the immediate prewar days.

There are various yardsticks for measuring specialization and commercialization in farming, all of them showing in one way or another that farmers have substituted capital for labour and also have increased the size of their business. Changes taking place over the decade 1951-61 were recorded by the census, and perhaps the most significant indication of the trend was in the decreasing proportion of farms found by the census to be in the "mixed farming" classification, which included those farms with no predominant enterprise such as dairying or wheat growing. Such farms constituted 18 p.c. of all commercial farms (farms with sales of \$1,200 or more) in 1951 but only 12 p.c. in 1961.

The increase in the average capital investment per farm, even after allowing for rising prices and appreciating land values, is another measure of the commercial development of agriculture. In 1951, two thirds of the nation's farms had a total capital investment in real estate, machinery and livestock of less than \$10,000 but by 1961 only one fifth of all farms were in this category. In 1951, about 34,000 farms, or 5 p.c. of the total, had a capital investment of \$25,000 or over; almost 40 p.c. were in this size group in 1961.

In 1951, 62 p.c. of all farms produced \$1,200 or more worth of farm produce annually; in 1961, the proportion was 74 p.c. The decrease in numbers of farms during the decade was greatest in the group of census farms producing less than \$1,200 worth of products. The decrease in numbers of all farms was 16 p.c. but the decrease in the numbers of those producing \$1,200 or more of farm produce was 9 p.c.*

A commercial farm is often thought of as being one with a large acreage but this is not necessarily so. A commercial farm may be of any size and there were relatively small changes from 1951 to 1961 in the size-distribution of farms with sales of \$1,200 or more. In 1951, 1.3 p.c. of all these farms were nine acres or less in size compared with 1.6 p.c. in 1961; in both years, most were in the 70-to-239-acre size group—in 1951, 45 p.c. and in 1961, 39 p.c. The farms containing more than 400 acres increased from 1 to 2 p.c. of the total in the decade. The larger Canadian farms produce the greater proportion of the total output. In 1961, farms with sales of \$5,000 or more constituted 29 p.c. of all farms and produced 71 p.c. of all sales; in 1951, the corresponding proportions were 14 p.c. and 47 p.c., respectively. In the latest census year there were 50,000 farms averaging 810 acres in size and these farms, which made up 10 p.c. of the total number, accounted for 45 p.c. of all sales.

That farms have become more specialized is indicated by the fact that in 1961 there were generally fewer enterprises on each farm and that the enterprise was larger than a decade earlier. The proportion of all farms reporting cattle was about the same in 1961 as in 1951 but the average number of cattle on those farms increased from 17 head to 32

*Comparison made using the 1951 Census definition of a farm (see p. 496).

head. Fewer farmers kept milk cows in 1961 than in 1951, the proportions being 64 p.c. and 73 p.c., respectively. Decreases also occurred in the number of farmers keeping hogs and hens and chickens, the former dropping from 58 p.c. to 46 p.c. and the latter from 69 p.c. to 55 p.c. Similar changes occurred in various crop enterprises. In 1951, almost 60 p.c. of all farms grew potatoes and the average size of enterprise was eight tenths of an acre; in 1961, the proportion had decreased to 45 p.c. and the average size had increased to one and four tenths acres. Average sugar beet acreages rose from 17 acres in 1956 to 23 acres in 1961 and tobacco acreages per farm were up by about one acre over the same five-year period.

Regional and Provincial Contributions of Agriculture.—Agricultural production, being dependent on such factors as soil, climate and access to markets, naturally differs from region to region across the great expanse of Canada. In general, the country may be divided into four main geographical areas—the Maritime Provinces (excluding Newfoundland), Central Canada, the Prairie Provinces, and British Columbia—and, although local differences in agricultural production exist within these areas, one or two major types predominate.

The regional differences in Canadian farm production are indicated by the distribution of cash income from farm product sales. In 1963, Western Canada (the Prairie Provinces and British Columbia) accounted for 73 p.c. of the total value of crops sold. Wheat, including Canadian Wheat Board payments, accounted for 53 p.c. of the total value of all crops sold; 97 p.c. of the wheat output is grown in the Prairie Provinces. The prairies also lead in the production of feed grains, rye, flaxseed and rapeseed. All of Canada's commercial production of soybeans is grown in Ontario. Potato production is concentrated in Eastern Canada where over 86 p.c. of the total income from sales is realized, 44 p.c. of it in the Maritimes. Climatic factors are the main determinants of areas suitable for fruit and vegetable production with the result that southern Ontario and British Columbia produce three quarters of the total value.

Agriculture is third in importance of all the commodity-producing industries.* However, its relative importance differs somewhat in each province. Agriculture is the largest contributor to the net value of total output only in Saskatchewan, where it contributes about 30 p.c. to the province's economy, followed closely by construction. Agriculture ranks second in Prince Edward Island, after construction, producing about 28 p.c. of the total net value. Farming is in the same relative position as for the nation in Quebec, Ontario, Manitoba and Alberta. In the first three of these provinces, manufacturing is the leading commodity-producing industry and construction leads in Alberta. In Nova Scotia, agriculture ranks fifth in importance and is in sixth position in British Columbia; in both provinces, manufacturing is the leading industry.

The net value of agricultural production for Canada in the years 1960-61 averaged \$1,859,000,000 (in current dollars), over three times the average value produced in 1935-39. Over the same period, the increased ratios by province were: Prince Edward Island, 2.6; Nova Scotia, 1.6; New Brunswick, 2.1; Quebec, 3.0; Ontario, 3.3; Manitoba, 2.8; Saskatchewan, 3.9; Alberta, 3.4; and British Columbia, 3.6. Price rises contributed largely to these increases but the physical volume of agricultural output was greater or only slightly less in 1960-61 in all provinces. For Canada as a whole, output in 1960-61 was 1.5 times greater than in the immediate prewar period. It should be recalled when considering this comparison that drought sharply reduced output in the Prairie Provinces in 1961 as it did in several years of the earlier period.

"Agri-business".—Agriculture in its primary production stage provides employment for 641,000 persons, but many more derive their livelihoods from the processing, transportation and marketing of farm products. Approximately 314,000 persons are employed in the manufacturing industries using products of farm origin, both domestic and imported,

*Include agriculture, forestry, fisheries, trapping, mining, electric power, manufacturing and construction. Based on 1961 estimates of net value of production.

and these people make up 24 p.c. of all employees in manufacturing. Manufacturing establishments using products of farm origin constitute 27 p.c. of all plants and include firms engaged in the manufacture of bakery products, the preserving of fruits and vegetables, the manufacture of dairy products, flour milling, feed preparation, meat packing and tobacco manufacturing; 24 p.c. of the manufacturing plants use products of Canadian farm origin only.

The farming community is a large consumer of industrial products, the production of which provides employment for an ever-widening group of workers. The farm machinery and repair parts industry annually does \$330,000,000 worth of business at wholesale prices, employs 11,000 people in 69 factories, and pays average annual wages and salaries of \$4,800. Farmers are large users of fertilizers and agricultural limestone, supporting an industry doing more than \$105,000,000 worth of business annually, and the quantity sold is rising each year. There are 42 fertilizer plants in Canada producing mixed fertilizers and employing 1,200 workers earning an average wage of \$4,700. Farmers buy large quantities of gasoline and diesel fuels for the 1,000,000 or more motor vehicles and tractors on farms. In 1961, there were 358,000 automobiles on farms, or 1.1 per farm reporting; 68 p.c. of the farmers had cars and more than half of them had trucks. Farmers' cars represent over 8 p.c. of total Canadian automobile registrations and farm trucks are equal in number to more than one quarter of all commercial cars and trucks. Motor fuels are used, as well, in other items of farm equipment such as self-propelled combines and swathers. Electrical equipment is also important on Canadian farms, over 85 p.c. of which have electric power. Average consumption per "farm service" customer is over 4,300 kwh. a year.

Transportation.—The movement of farm products to domestic and export markets is an important part of the business of common and private carriers in Canada. One fifth of the gross revenue of the railways, trucks and inland water carriers in 1962 was from this source. The proportion was highest for trucks (for hire and private intercity), about 27 p.c.* compared with approximately 19 p.c. for inland water carriers (wheat only)† and 13 p.c. for the railways. The total gross revenue of all three carriers from freight traffic in 1962 was approximately \$2,000,000,000 and the revenue from agricultural products was over \$373,000,000.

Of the total volume of traffic tonnage on the St. Lawrence Seaway in 1962, including cargoes to and from United States and Canadian ports, products of mineral origin comprised 45 p.c. followed by agricultural products with 35 p.c. Wheat alone made up 15 p.c. of the volume of all traffic.

The transportation companies are important employers of labour in this country and, as was shown, about one fifth of their business is the result of agricultural production. Railway employees in 1962 numbered 137,000 and their average weekly wages and salaries amounted to \$89.41. Truck transportation workers numbered 35,000, earning an average weekly wage of \$83.13. Employment provided by the inland water carriers represents 32,000 jobs (including services incidental to water transportation), paying an average of \$85.23 a week in wages and salaries.

Marketing.—The marketing of farm products in Canada is performed by a variety of agencies and private companies. The agencies include government boards, producer boards and co-operative marketing associations. Canada was among the first countries to develop bulk handling of grain. Today, this country has one of the world's most modern and efficient country and terminal elevator systems. The prairie country elevators, to which the farmer makes delivery, have an average capacity of 70,000 bu. each. At mid-1962 there were 5,226 licensed country elevators with a capacity of 367,000,000 bu. Terminal elevators, located at Fort William/Port Arthur, Vancouver and Churchill, numbered 46 with an average capacity of 3,400,000 bu. The 25 mill elevators had storage for 13,000,000 bu. and the 30 eastern elevators averaged 3,600,000 bu. storage capacity.

*Includes some United States farm products not separable.

†Excludes shipments destined for overseas countries and carried in ships of foreign registry.

Total licensed grain storage capacity in Canada therefore amounted to 644,000,000 bu. Grain elevators provided over 10,000 wage-earning jobs with average wages of \$76 a week.

The Canadian Wheat Board has been operating since 1935 under the Canadian Wheat Board Act and relevant regulations. The Board is the sole selling agency in domestic and export markets for those crops named as grains under the Act and grown in the designated areas of Western Canada. These crops include spring and winter wheat, Durum wheat, oats, barley, rye, flaxseed and rapeseed. Before the opening of each crop year, the Board announces initial prices for each of these crops and then, as they are sold, returns are pooled by grade, out of which interim and final payments are made to each producer.

Producer marketing boards, authorized under provincial legislation, are active in the marketing of most other agricultural products. In 1962, the number of such boards was 80, compared with 31 in 1956. Some marketing boards limit their functions to negotiation of price and other terms of sale and are most effective for canning crops and other products that are normally sold on a contract basis. Other marketing boards have the power to direct the sale of produce as to time, place, quantity and quality, to set prices and to impose service charges. Still other boards function largely to negotiate terms of sale but designate an agency to handle a portion of the product sold.

The main commercial effort of Canadian farmers on a co-operative basis is in the marketing of their products. Sales of farm products through co-operatives averaged \$975,000,000 in the two-year period 1961-62. This amount was equal to one third of all farm produce sold through commercial channels. The largest number of co-operative marketing associations serve dairy farmers. These numbered over 360 in 1962 and the number of associations handling livestock and livestock products was over 330. In volume of sales, the three wheat pools are foremost. They own and control country elevators throughout the western provinces and also terminal facilities at the Lakehead and Vancouver.

In 1963, commercial refrigerated space available for the storage of perishable food products in Canada amounted to 148,000,000 cu. feet in 3,114 warehouses. Of this space, about 62,000,000 cu. feet was in 263 warehouses constructed under the Cold Storage Act. The average wages and salaries of workers in the storage warehousing industry in 1962 was about \$3 a week more than in the grain elevator trades.

The final link in the food chain from producer to consumer is the retail chain store or the independent grocery. Modern retail stores feature self-service but they are still employers of a large number of workers—in 1962, they employed 77,000 persons and their total wage and salary bill was over \$4,000,000. While labour productivity at the retail level has increased notably in recent years with the development of self-service, the trend toward greater variety of high quality, conveniently packaged and often pre-cooked foods has probably resulted in higher marketing costs. It is estimated that the farmers' share of the consumer dollar in 1962 averaged 43 cents compared with 58 cents in 1950. However, with the rise in *real income*,* the quantities of the various food items that the consumer can buy with an hour's wages was higher in 1962 than a decade earlier. In 1962, an hour's wages in the manufacturing industries would buy 7.7 loaves of bread compared with 6.3 in 1950; or 8.0 qt. of milk compared with 5.6; 3.1 lb. of butter instead of 1.5; and 2.3 lb. of beef instead of 1.9.

Food Costs.—Because of improved efficiency, both in farm production and in the processing and marketing of farm products, the consumer now enjoys a wide range of quality foods at moderate cost. Prices paid by the consumer for food have risen proportionately less since prewar than have the prices of the goods and services farmers buy; food prices are now about 153 p.c. higher than in 1935-39 while commodities and services used by farmers have risen 191 p.c. Prices received by farmers are up by 164 p.c. but

*Income adjusted for the rise in consumer prices.

the wholesale prices of farm products have risen less than general wholesale prices. The general wholesale index is up by 140 p.c. since prewar compared with a rise of 136 p.c. in the wholesale prices of farm products.

Consumer expenditures on food are a slightly smaller proportion of their total expenditures on all consumer goods and services than they were before World War II—23 p.c. compared with 25 p.c. in 1935-39. Rising consumer income coupled with a smaller proportionate rise in food costs have left a greater proportion of consumer income for expenditures other than food.

Food Exports.—Canada is one of the major food exporting countries of the world. Cereals, cereal products, seeds, purebred livestock, livestock products, fruits and vegetables make up the bulk of the exports of agricultural products which are valued at over \$1,000,000,000 annually, almost one fifth of Canada's total export trade. Wheat displaced newsprint in 1963 as the leading export item for the first time since 1952 and the record export sales of wheat and wheat flour provided a strong impetus to the economy. Purchases of new automobiles and equipment by farmers showed a sharp upswing.

Farm and Non-farm Incomes.—Realized net income from farming in 1963 totalled \$1,410,000,000, not a record but equal to \$3,056 per farm and the second highest average ever reached; in 1962 the average was \$3,170. In addition, farm family workers derived income from non-farm sources. Real income per farm family worker, that is, income in terms of constant dollars, was 24 p.c. higher in the three-year period 1961-63 than in 1951-55. By contrast, real wages of factory production workers rose 25 p.c. over the same period of time. The rate of expansion of output in the postwar period in manufacturing was 3.9 p.c. annually compared with slightly more than 1 p.c. for agriculture. The higher rate of industrial over agricultural growth provided the economic incentive for the larger rise in real incomes in manufacturing.

Agricultural Research.—Biological and physical research in agriculture is undertaken extensively by the federal Department of Agriculture, by the universities and, on a more modest basis, by various provincial departments of agriculture, research councils, foundations and industries. At least 80 p.c. of all agricultural research is either done or provided with support by the federal Department of Agriculture. Without this program of research, Canadian agriculture could not have developed to its present level of efficiency.

A new development in 1962 was the founding of the Agricultural Economics Research Council of Canada to provide new knowledge and ideas in the interests of sound economic development. Its single objective is to strengthen the industry by the development of a long-range independent research program in the social sciences applicable to agriculture. Two studies to be undertaken by the Council are (1) an analysis of the objectives of government agricultural policy and (2) a study of the feed freight assistance program. The Council is financed by grants from the federal and provincial governments, from farm organizations and co-operatives, and from business and industry associated with agriculture.

Section 1.—Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces;

*Prepared (May 1964) under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada”.

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Territorial Division, Northern Administration Branch, Department of Northern Affairs and National Resources.

Subsection 1.—Services of the Department of Agriculture

The activities of the Canada Department of Agriculture fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end and toward the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development, and crop insurance and income security in the event of crop failure.

The Department has three main Branches—Research, Health of Animals, and Production and Marketing—and its organization includes a number of smaller units—the Agricultural Stabilization Board (see p. 453), the Agricultural Products Board, the Prairie Farm Rehabilitation Administration (p. 430), Crop Insurance (p. 453), the Economics Division, the Information Division and Departmental Administration. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation (p. 450) and the Board of Grain Commissioners (see Part II of Chapter XXI).

Research Branch.—The Research Branch is the principal research agency of the Department. It conducts a broad program of scientific investigation covering both basic studies and practical attacks on agricultural problems. There are seven Research Institutes at Ottawa; two Research Institutes, ten Regional Research Stations, four Research Laboratories, 27 Experimental Farms and 20 Substations are located throughout the ten provinces and the Yukon and Northwest Territories. The professional staff of the Research Branch numbers 864, of whom 460 have doctorate or post-doctorate degrees.

The Research Branch serves all principal agricultural areas in Canada and co-ordinates its efforts with those of the National Research Council, universities and kindred agencies. One staff group is charged with the planning and co-ordination of the program and another with the administration required to carry it out. Four assistant directors general, representing regional and organizational divisions, assist the programming of the work. Three research services—statistics, engineering, and analytical chemistry, located with the administrative and executive group at Ottawa—provide research groups across the country with specialized leadership and service and undertake critical researches or other creative work as required.

The Research Institutes are organized on a scientific rather than a problem basis and are engaged primarily on basic research of wide application to agriculture. They also carry out related national work such as the identification of plants, insects and pathogens. There are seven Institutes at Ottawa and one each at London and Belleville in Ontario.

The *Animal Research Institute* covers the fields of genetics and breeding, nutrition, physiology, biochemistry and management, and tackles problems in the production of milk, beef, lamb, pork, poultry, eggs, wool and fur. Studies are carried out at the *Plant Research Institute* in taxonomy, physiology, biochemistry, pathology, agrometeorology, weeds, and fruit and vegetable processing and storage. Cytological and genetic studies on cereal, forage, tobacco and horticultural plants are made by the *Genetics and Plant Breeding Research Institute* with special reference to problems encountered in the breeding programs and the assessment of quality characteristics. The *Soils Research Institute* studies genesis and classification, fertility, mineralogy and the organic, physiochemical and physical aspects of soils. This Institute gives leadership to the federal-provincial soil survey program through classification studies and by developing and standardizing analytical methods. It also provides a national soil-mapping service. A major section of the *Entomology Research Institute* deals with taxonomy, other assignments being in the fields of genetics, physiology, nematology and apiculture. The Institute assembles and maintains the national collection of insects. The *Microbiology Research Institute* is concerned mainly with metabolism, nutrition and genetics of bacteria of agricultural significance. The *Food Research Institute* conducts basic research on the characteristics of plant and animal products affecting food quality. The development of new principles of food processing and studies related to dairy technology are of major interest.

The *Research Institute* at London examines chemicals used or intended to be used for insect, disease or weed control and investigates the reason for and the nature of the biological activity of the chemical. The *Research Institute* at Belleville is concerned with efforts to control destructive insect pests and noxious weeds with parasitic and predaceous insects, and with insect disease organisms. It is also the principal importing centre for beneficial insects and for some disease organisms from foreign countries.

The Regional Research Stations and Laboratories cope with primary problems in various regions in all provinces. Other units have undertaken projects assisting in the exploitation of peat bogs, reclamation of marshland for pasture, prevention of soil erosion, dryland agriculture, the growing of special crops such as tobacco, and livestock breeding.

Health of Animals Branch.—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and Johne's disease; through the control and eradication of serious animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export. The Branch conducts ante-mortem and post-mortem examination of animals slaughtered at packing plants that market their meat products outside of the province in which they operate and also ensures that, in these plants, the animals are slaughtered in a humane manner. Animal pathology laboratories across the country, in addition to their research function, manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for diseases of domestic and wild animals and for determination of the soundness of meat food products.

Production and Marketing Branch.—The Production and Marketing Branch conducts the promotional and regulatory functions of the Department. Six Divisions administer legislation and policies in the production and marketing of livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants. Three Sections are concerned with markets information, consumer interests and with cold storage facilities and general services.

The *Livestock Division* administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle

and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international brokers who deal in fresh fruits and vegetables. The *Dairy Products Division* is responsible for the administration of legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The *Markets Information Section* compiles and distributes market information respecting livestock, meats and wool, dairy products, eggs and poultry, and fruits and vegetables. The *Consumer Section* helps to promote proper use of Canadian agricultural food products through experimental work, carried on by its home economists, on the cooking of foods and the preserving of perishables. The *General Services and Cold Storage Section* administers the payment of subsidies for the construction of public cold storage facilities. Cargo inspectors at the main Canadian ports check the handling of goods moving to export. Other inspectors in the principal marketing areas make spot checks on retail outlets to see that food products meet the prescribed standards of quality and grade.

Other Departmental Services.—The *Economics Division* collects, analyses and interprets economic information required to form and administer departmental policies and programs and also conducts surveys and research designed to improve agricultural production, marketing and farm living conditions. The Division acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, assisting in any economic undertakings with which the Department is concerned.

The *Information Division* gathers and publishes information arising from research work and the development of regulatory programs of the Department. Publication is through the printed word, press and radio releases, motion pictures, television and exhibits.

The general business management of the Department is the responsibility of the *Departmental Administration*, the duties of which also embrace Emergency Measures Planning and the Departmental Library; the main emphasis of the Library's collection is, of course, on agriculture but extends also to the life sciences.

Subsection 2.—Farm Assistance Programs*

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 430) to deal with the results of the drought in the 1930's; the Prairie Farm Assistance Act (p. 454) to mitigate the effects of crop failure; and the Maritime Marshland Rehabilitation Act (p. 432) to save valuable soil in the Maritime Provinces.

* Since the preparation of this Subsection, additional farm assistance legislation has been passed by Parliament in the form of the Farm Machinery Syndicate Credit Act (SC 1964, c. 29), which, as its name implies, provides for the extension of credit to syndicates for the purpose of purchasing machinery for use primarily by their members.

Although much has been accomplished by these measures, changes during the past two decades have dictated the need for a new approach to some agricultural problems. Large-scale mechanization, increasing farm size coupled with declining farm numbers, and marketing problems have led to the enactment of a number of legislative measures covering such matters as credit for farmers, price stability, crop insurance, resource development and policies to assist regional groups to catch up with the national level of progress. These measures are described individually below and in Chapter X on Land Use and Renewable Resource Development.

Farm Credit Act.—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II of the Act the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, or \$40,000, whichever is the lesser. Under Part III the Corporation may lend 75 p.c. of the appraised value of the farm land and buildings and of the livestock and equipment taken as security, or \$55,000, whichever is the lesser. To qualify for a loan under Part III a farmer must be under 45 years of age and have had at least five years farming experience. Part III loans are further secured by mandatory insurance on the

life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan is reduced to 75 p.c. of the appraised value of the farm land and buildings. Similar life insurance and supervision are available on an optional basis to borrowers under Part II.

The interest rate on the first \$20,000 borrowed under Part II or the first \$27,500 under Part III is set by statute at 5 p.c. On that part of the loan which exceeds these amounts the interest rate is set by the Corporation with the approval of the Governor in Council. This rate can vary according to the interest rate on money borrowed by the Corporation, the operating costs of the Corporation and the allowance made for reserves against capital losses. For the year ended Mar. 31, 1965, the interest rate on the amount of loan under Part II exceeding \$20,000 and the amount under Part III exceeding \$27,500 was set at 6 $\frac{3}{4}$ p.c. All loans are repayable on an amortized basis within a period not exceeding 30 years.

The Corporation has 124 field offices administered by 169 credit advisers who are responsible for informing local farmers about the services available for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

Funds for lending are borrowed at current interest rates from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation, which has been fixed by the Act at \$24,000,000.

In the year ended Mar. 31, 1964, the Farm Credit Corporation approved 8,689 loans for a total of \$108,009,100 as compared with 7,438 loans for a total of \$90,924,300 the preceding year; the total amount of principal outstanding on loans was \$341,169,139 as compared with \$270,277,265 the previous year.

¹ Repealed by the Farm Credit Act, proclaimed Oct. 5, 1959.

Farm Improvement Loans Act.—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period July 1, 1962 to June 30, 1965. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively. The borrower is required to provide from 10 p.c. to 40 p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$400,000,000. By Dec. 31, 1963, 2,443 claims amounting to \$1,711,367 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one-tenth of one per cent after recoveries have been taken into account.

By the end of 1963, \$1,134,698,715 or 82.5 p.c. of the total loans made had been repaid. The position at that time was as follows:—

Period	As at Dec. 31, 1963		
	Loans Made	Repayments ¹	Balance Outstanding
	\$	\$	\$

Agricultural Stabilization Act.—The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous ten-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another: honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of deficiency payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. The institution of limited deficiency payments by the Board assists in the adjustment of production in a relatively short time. During the period of adjustment, the Board guarantees a minimum average return to producers for a limited quantity of product.

During the six fiscal years that the Act was in operation prior to Mar. 31, 1964, the cost of stabilization programs averaged \$57,000,000 a year. The Board has available a revolving fund of \$250,000,000. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

Crop Insurance Act.—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops

or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage. By the end of May 1964, crop insurance legislation had been passed by Manitoba, Saskatchewan, Prince Edward Island, Nova Scotia and Alberta.

Contributions from the federal treasury are limited to 50 p.c. of the administrative costs incurred by a province and 20 p.c. of the amount of premiums paid in any one year. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. Farmers insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In 1963 more than 7,400 farmers in Manitoba, Saskatchewan and Prince Edward Island took out crop insurance coverage of approximately \$15,000,000.

Prairie Grain Advance Payments Act.—This Act, which came into force on Nov. 25, 1957, provides for an interest-free advance payment to producers for threshed grain (wheat, oats, and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 20 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is \$3,000. At Apr. 30, 1964, the following advance payments had been made:—

<i>Period</i>	<i>Applications</i>	<i>Total Advance</i>	<i>Average Advance</i>
	No.	\$	\$
Aug. 1, 1957 — July 31, 1958.....	50,412	35,203,467	698
Aug. 1, 1958 — July 31, 1959.....	45,341	34,369,653	758
Aug. 1, 1959 — July 31, 1960.....	50,047	38,492,505	769
Aug. 1, 1960 — July 31, 1961.....	76,089	63,912,550	839
Aug. 1, 1961 — July 31, 1962.....	22,342	16,656,713	745
Aug. 1, 1962 — July 31, 1963.....	39,683	29,251,526	737
Aug. 1, 1963 — Apr. 30, 1964.....	63,427	62,132,949	980

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At Apr. 30, 1964, refunds had been made as follows:—

<i>Period</i>	<i>Total Refunded</i>	<i>Total Advance Outstanding</i>	<i>Percentage Refunded</i>
	\$	\$	
Aug. 1, 1957 — July 31, 1958.....	35,199,195	4,272	99.9

Aug. 1, 1959 — July 31, 1960.....	38,480,612	11,893	99.9
Aug. 1, 1960 — July 31, 1961.....	63,878,523	34,028	99.9
Aug. 1, 1961 — July 31, 1962.....	16,596,878	59,835	99.6
Aug. 1, 1962 — July 31, 1963.....	29,140,296	111,230	99.6
Aug. 1, 1963 — Apr. 30, 1964.....	55,731,062	6,401,887	89.6

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1963-64 crop year, as at July 31, 1964, totalled \$9,673,396; total payments made under the Act since 1939 amounted to \$340,092,230.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in the 1963-64 crop year, as at July 31, 1964, was \$10,736,292. The total amount collected since 1939 was \$153,443,423.

Farmers operating land in the spring wheat area, and not covered by the federal-provincial insurance scheme, are eligible for awards. Crop failure and natural causes preventing seeding and summer fallowing are taken into account in making awards and these may not exceed \$200 in respect of any one farmer's total cultivated acreage.

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinary supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.—The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, three Check Testers, three Dairy Herd Improvement Promoters, a Director of Veterinary Services and ten subsidized practising veterinarians, a Livestock Director, a Marketing Director, a Horticulturist, a Soil Analysis Assistant, a Poultry Fieldman, an Economist, an Agronomist, a Director of 4-H Clubs, three Agricultural Representatives, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions, producer and marketing organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the federal and provincial Departments of Agriculture. The Committee meets

* Information supplied by the agricultural authorities of the various provinces.

quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with minimum duplication of services.

New Brunswick.—Provincial government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following Branches: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, and agricultural education.

Quebec.—The agricultural policy of Quebec is formed around the premise that the family farm remains the ideal basis of the rural social structure. To serve the interests of agriculture, the provincial government, aided by various co-operative and professional associations, is working toward the improvement of agricultural production and marketing through the provision of farm credit, assistance to the farmer in organizing the collective commercialization of his products, the improvement of education and teaching facilities for farmers, and the encouragement of agricultural research. In addition, aid is provided in the form of subsidies to the settler and farmer in handicapped rural areas for the construction of buildings, the acquiring of stock, land clearing and development, and the transportation of produce to market. Under the federal-provincial ARDA program, plans are under consideration for the better utilization of farm lands and, generally, the rational development of rural areas.

These services are administered through the Department of Agriculture and Colonization which operates under authority of a Minister, two Deputy Ministers and an Advisory Board, and comprises seven Services, the several divisions and branches of which deal with specific problems. Each Service is headed by a Director General.

The *Production and Marketing Service* gives guidance to farmers in the best methods of producing and marketing dairy, animal, horticultural and forestry products and administers the co-operative movement. Co-operative associations for the purchasing of farm supplies and the marketing of farm products are particularly prevalent in the Province of Quebec.

The *Research, Education and Information Service* administers the Agricultural Research Council which was founded in 1947 to direct, co-ordinate and stimulate research work in agriculture; the results of such research are published in the annual review *Recherches Agronomiques*. This Service is also concerned with the dissemination of scientific information to farmers and the general public through the press, radio and publications; animal hygiene; veterinary education (the School of Veterinary Medicine at St. Hyacinthe); and agricultural education (Institutes of Agricultural Technology at St. Hyacinthe and Ste. Anne de la Pocatière and fifteen intermediate schools). Information intended to improve family life in general by the cultural enrichment of the farm woman is given through direct teaching, by means of the review *La Terre et le Foyer*, through local exhibitions and the Provincial Exhibition of Farm Women's Clubs.

The *Rural Planning Service*, through its four sections—economy, planning, development and utilization of land—is mainly concerned with the implementation of joint federal-provincial programs being conducted under the federal Agricultural and Rural Development Act (ARDA). The *Colonization Service* is occupied with the establishment of settlers, concessions of land and clearing of land. The *Farm Planning and Extension Service* is involved in the solving of problems of management and the promotion of agriculture at regional and county levels. Twenty-seven local offices co-ordinate the work of agronomists and specialists. Five-year agricultural contests are held in which the farmers of a parish or county take part, and an annual competition for the Agricultural Order of Merit brings into the limelight the most deserving farmers in each of the five regions into which the province is divided. The work of the *Rural Engineering Service* falls into three categories—colonization roads, mechanized work and drainage work. The *Administration Service* deals with personnel, records and the purchasing and maintenance of materials and tools.

Also under the jurisdiction of the Department are the Farm Credit Bureau, the Quebec Sugar Refining Corporation (St. Hilaire) and the Agricultural Marketing Board.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, 14 branches and two Experimental Farms, and through research conducted under the direction of the Ontario Research Institute as well as that under way at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, Kemptville Agricultural School and the Horticultural Experiment Station.

The administration of the Department is under the supervision of a Deputy Minister with the assistance of two Assistant Deputy Ministers. The Ontario Agricultural College, the Ontario Veterinary College and Macdonald Institute (the Federated Colleges of Ontario) report to the Minister and Deputy Minister. The Research Institute is the responsibility of the Director of Research who, in turn, reports to the Deputy Minister. During 1962 an office was established to develop programs under the Agricultural Rehabilitation and Development Act of Canada.

The services of the Co-operatives Branch are designed to encourage and assist co-operatives to operate sound and successful businesses under the control of their members; it also administers the Co-operatives Loans Act. The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario, functioning under the authority of the Milk Industry Act, regulates and supervises the marketing of milk and cream. During 1963, a new approach to marketing and merchandising agricultural food products was initiated by the formation of the Ontario Producers, Processors, and Consumers Food Council. All segments co-ordinated their efforts toward the solving of current problems and the recommending of long-range policies. The Food Council operates as a separate branch and is also responsible for the market development program of the Department in an effort to increase markets at home and abroad. A Marketing Development Specialist is located in the Department of Economics and Development to co-ordinate development programs concerning agricultural food products.

Through a staff of Agricultural Representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also provides assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Service, which is part of the Extension Branch, gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies with particular attention to the health of animals, gives support to purebred livestock associations and licenses artificial insemination centres, community sales, wool warehousemen and egg grading stations. The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; in co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. Demonstration Farms in northern Ontario, one at New Liskeard and another at Sault Ste. Marie, are operated for the demonstration of methods adaptable to the area concerned, present emphasis being on beef cattle production. The Field Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed and works for the improvement of pastures; it also administers the Weed Control Act.

The Research Institute co-ordinates all research activities of the province's agricultural schools and colleges in addition to developing a thorough research program in the interests of agriculture and industry associated with agriculture.

Manitoba.—The Department of Agriculture and Conservation serves Manitoba through the following branches and services.

The Extension Service deals with agricultural engineering, entomology and bee-keeping, radio, TV and information, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days, and short courses are held. Thirty-seven agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities; 14 home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock and poultry, and works in close co-operation with the Veterinary Laboratory Service and the federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making and issues licences to makers of dairy products and to cream graders. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage, special crops and horticulture and promotes proper land use through soil conservation programs. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation and weed control.

The Economics and Publications Branch deals with agricultural economics, supervises the farm business clubs and publishes and distributes annually approximately 150,000 bulletins, circulars, posters, leaflets, etc. The Publications section publishes agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and credit unions and administers the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. The Departmental Act and associated statutes provide for the construction of works to control and use water, and for technical and financial assistance to local governments for the construction, maintenance and operation of such works. The Floodway Division is responsible for co-ordinating all matters in respect to design and construction of the proposed Red River Floodway.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Agricultural Representative Branch has a technical staff of 55, which serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information and to develop district improvement programs. The Department pays one half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Department of Labour and the National Employment Service.

Animal Industry Branch specialists provide technical information to livestock producers and administer the record of performance program for beef cattle. The Dairy Division of the Branch administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing

and frozen-food locker plants, and administers dairy, locker plant and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry testing and banding services, licenses produce dealers and buyers, hatcheries and hatchery agents, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the Veterinary Service District Act and the calfhood vaccination program, provides a laboratory service for the livestock and poultry industries and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and water utilization and control projects. Land reclamation and development, and construction of provincial community pastures also come within its jurisdiction. The Branch administers the ground and surface water of the province and provides for regulated use of water for all purposes.

The Lands Branch administers Crown and Land Utilization Board lands, except forest reserves and parks in settled areas; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures.

The Plant Industry Branch conducts grassland improvement programs and programs for crop improvement and protection, and gives advice on soil conservation, horticultural problems, and weed and pest control. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production and conducts continuous inspection.

The Agricultural Machinery Administration carries out detailed tests on agricultural machines being sold in Saskatchewan to evaluate their structural and functional performance and inspects and licenses farm implement vendors. Other services to the public are provided through an agricultural machinery extension program.

Farmers are assisted by the Family Farm Improvement Branch which gives technical advice at the farm on the construction of farm buildings and on farmstead planning, mechanization and materials handling. The Branch conducts research for farm water and sewage works.

The Economics and Statistics Branch undertakes research and investigations required to formulate and evaluate policies and programs that will ensure a high level of growth and efficiency in Saskatchewan's agriculture; it collects, analyses and distributes economic information and principles to assist people interested in or engaged in agricultural pursuits. Data on crop conditions, production, marketings and income are available from the Statistics Division.

Farm information is dispensed daily over private radio stations, over TV stations and to the press by the Information Division.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crops and soils. A Supervisor is in charge of each division, namely, Crop Improvement, Crop Protection and Pest Control, Weeds and Soils, Horticulture, Apiculture, and Special Projects. A crop diagnostic service is offered through the Crop Clinic at Edmonton. The Horticultural Station at Brooks and the Tree Nursery at Oliver offer services in horticulture and provide trees for farm planting.

The Livestock Branch administers policies to aid in general livestock improvement and sire distribution. This includes setting standards for and approving public sales of

sires, record of performance programs for beef cattle, sheep and swine, extension and control of artificial insemination. The Branch also administers supervision of Feeder Associations; brand registration; brand inspection; licensing of butchers, livestock dealers and stockyards; pound districts and sale of horned cattle.

The Dairy Branch administers the Dairymen's Act, the Frozen Food Act and the Margarine Act. The testing, grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairy and frozen-food plants. A regular cow-testing service to provide the basis for breeding, feeding and culling dairy cattle is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and trucker licences for the handling of poultry products.

The Veterinary Services Branch provides diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, and many meetings; and promotes government policies aimed at reducing losses throughout the province such as brucellosis control, stockyard inspection, swine health program, mastitis, etc.

The Agricultural Extension Service operates 45 offices and employs the services of 59 district agriculturists and 21 district home economists. The district agriculturists and district home economists supply information and provide guidance to farm families with respect to agriculture and homemaking; they also promote progressive agricultural or homemaking policies and programs. 4-H Clubs are administered by this Branch. The Branch is divided in the following main divisions: District Agriculturists; District Home Economists; 4-H Clubs; Agricultural Engineering; Radio and Information; and Publications and Visual Aids.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement; the Radio and Information Branch conducts five broadcasts a week over ten radio stations and issues weekly bulletins to press and radio; the Water Resources Branch deals with water rights, drainage, irrigation, and water power development; the Lands and Forests Utilization Committee (composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and Department of Agriculture) deals with the proper use of submarginal agricultural land; and the Farm Economics Branch studies various economic farm problems and advises farmers on management and marketing.

Credit is made available to farmers for the purchase of lands under the Farm Purchase Credit Act, and for home improvements under the Farm Home Improvement Act. Agricultural and Vocational Colleges are operated at Olds, Fairview and Vermilion.

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of licensed abattoirs too small to qualify for federal inspection services. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at nine points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 17 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government land-clearing program and farm labour services, and promotes junior club projects. The Poultry Branch offers extension services to the poultry industry.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural sciences, which may be at university or secondary school level or be given in special short-term or longer-term courses. A number of universities in the provinces of Central and Western Canada offer degree courses in agricultural, household and veterinary sciences and also provide opportunities for postgraduate study and research in the agricultural field. Most courses at the secondary level give practical training in modern farming methods and community leadership. The facilities available in each province are described in the 1963-64 Year Book, pp. 430-432.

Section 3.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada and through partial-coverage surveys. Results of the 1961 Census are summarized in Section 4 of this Chapter and are available in greater detail in census publications issued by the Bureau.† A list of such publications is available on request.

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the Canada Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small. In the following Subsections, details are given for 1963; figures are subject to revision.

Economic Activity in 1963 Related to Agriculture.—During 1963, the gross national product experienced continuous growth and reached a level of \$43,000,000,000, an increase of 6.5 p.c. over the previous year's estimate of \$40,300,000,000. With over-all prices for the year increasing by less than 2 p.c., more than two thirds of the gross national product increase represented a gain in volume of output. The year ended on a particularly strong note with a 3-p.c. increase in the final quarter, one of the sharpest gains since the beginning of the current expansion in early 1961. Although all components of final demand shared in the year's growth, the most prominent developments were a notable 11-p.c. rise in the level of merchandise exports and a contraction in Canada's deficit on current account transactions with other countries. The rise in exports was dominated by

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa.

exceptionally large shipments of wheat to Russia in the final quarter of the year, although increased foreign demand was widespread over many commodities.

Increases in demand were paralleled by a 7-p.c. rise, to \$32,600,000,000, in national income, in which both profits and labour income registered similar relative gains. A rise in total net income from farming operations also contributed to the increase in national income. The gain recorded for agriculture was attributable in part to higher cash receipts and income in kind but mostly to a significant build-up in farm inventories of grains in Western Canada as a result of larger crops, especially wheat, in 1963. Although farm operating expenses and depreciation charges continued to advance, the increase was insufficient to offset completely the gain in gross income.

Subsection 1.—Cash Income from Farming Operations, 1963

Estimates of cash income from farming operations include data concerning cash income from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, deficiency payments made by the Agricultural Stabilization Board, and supplementary payments. Farm cash income from the sale of farm products includes the returns from all sales of agricultural products except those associated with direct inter-farm transfers. The prices used to value all products sold are prices to farmers at the farm level; they include any subsidies, bonuses and premiums that can be attributed to specific products, but do not include storage, transportation, processing and handling charges which are not actually received by farmers.

Cash receipts for 1963, excluding supplementary payments, were estimated at \$3,219,100,000 for Canada (excluding Newfoundland). This amount was 2.1 p.c. above the previous record of \$3,154,200,000 established in 1962. Contributing most to the increase were higher receipts from the sale of wheat, coarse grains, tobacco, and poultry and dairy products; less important contributions were made by gains in returns from the sale of potatoes and fruits and increased net cash advances on farm-stored grains in Western Canada. The more important decreases in returns were recorded for cattle, calves, hogs, flaxseed and Canadian Wheat Board payments on previous years' western grain crops. Farmers received, during 1963, \$14,800,000 in the form of supplementary payments paid out entirely under the provisions of the Prairie Farm Assistance Act. This contrasted with supplementary payments during 1962 of \$70,300,000 which included payments under the Prairie Farm Assistance Act and also payments made under the Western Grain Producers' Acreage Payment Plan. Total cash receipts for the year, including supplementary payments, amounted to \$3,233,900,000, a record high fractionally above the 1962 estimate of \$3,224,600,000.

Field Crops.—During 1963 farmers realized an estimated \$1,316,300,000 from the sale of field crops, cash advances on farm-stored grain in Western Canada, and Canadian Wheat Board payments. The increase of nearly 7 p.c. over the \$1,233,200,000 realized in 1962 resulted mainly from substantially higher income from the sale of wheat, coarse grains and tobacco. Income from field crops accounted for 40.9 p.c. of the farm cash income for 1963, excluding supplementary payments.

Income realized by farmers from wheat, at time of delivery, amounted to \$599,300,000 compared with \$527,100,000 in 1962. This gain of \$72,000,000 was the largest recorded in 1963 for any single item included in farm cash income and was attributable entirely to larger marketings. Marketings of oats and barley in 1963 exceeded those of 1962 by about 40 p.c., and accounted for the significant increase in the returns from these grains—from \$85,800,000 to \$114,100,000. The second highest increase recorded for a field crop item in 1963 was that for tobacco; total receipts to producers were \$114,200,000, compared with \$96,500,000 in 1962, most of the gain accruing to Ontario. This situation was largely a result of marketing problems that developed in the fall of 1962 and necessitated the marketing, in the early months of 1963, of that part of the 1962 crop which normally would have been sold before the end of that year.

These gains were offset to some extent by smaller participation payments made by the Canadian Wheat Board on previous years' grain crops. Western Canadian farmers, at the time of delivery, are given initial payments and certificates stating the quantities and grades delivered and these certificates entitle the farmers to share in any surpluses accumulated by the Board through subsequent sales of these grains for domestic consumption and export. The share of the surplus accruing to farmers represents the Canadian Wheat Board participation payments. In 1963, these payments amounted to \$124,000,000 compared with \$181,100,000 in 1962.

Income from the sale of flaxseed was also lower than in 1962. Smaller marketings and lower prices brought income from this commodity down by about \$11,000,000 from the \$47,600,000 realized in the previous year.

Livestock and Animal Products.—Cash returns to farmers from the sale of livestock and animal products were estimated to be \$1,867,300,000 in 1963, down slightly from the record high of \$1,884,800,000 reached in 1962; returns from the sale of poultry and dairy products were up in 1963 but income from cattle and calves, at \$639,000,000, was down 6 p.c. from the all-time high of \$680,000,000 realized in the previous year—attributable to both lower prices and smaller marketings. Lower prices also brought returns from hogs down from \$330,300,000 in 1962 to \$321,000,000 in 1963.

Poultry meat production reached a new peak in 1963 and cash income from this source amounted to \$168,900,000 compared with \$153,300,000 a year earlier. Although egg production was below the 1962 level, prices rose sufficiently to provide receipts of \$148,400,000, nearly \$7,000,000 above the previous year.

CASH INCOME FROM SALE OF FARM PRODUCTS, 1954-63

Net Income of Farm Operators from Farming Operations.—Two different estimates of net income from farming operations are prepared by the Agriculture Division. One is called *realized net income* and is obtained by adding together cash income from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as *total net income* and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and the end of the year. The latter estimate is the one used to calculate the contribution of agriculture to national income.*

For the year 1963, it was estimated that *realized net income* of farmers from farming operations amounted to \$1,410,200,000. This estimate was 5.4 p.c. below the 1962 level of \$1,490,700,000 but 3.7 p.c. above the average of \$1,360,500,000 for the five-year period 1958-62. Although farm cash income reached a record high in 1963 and income in kind advanced, farm operating expenses and depreciation charges rose by nearly 5 p.c. and supplementary payments dropped from \$70,300,000 in 1962 to \$14,800,000.

Total net income, which takes into account changes in farm inventories of grains and livestock, amounted to \$1,717,000,000 in 1963, slightly more than 2 p.c. above the 1962 level of \$1,678,800,000 and nearly 30 p.c. above the average of \$1,326,200,000 for the five-year period 1958-62. Gains in farm cash income and income in kind contributed to the increase, but most of it was attributable to a significant build-up in farm inventories of grains in Western Canada as a result of larger crops, especially wheat. Although that part of farm net income represented by inventories is not readily available for spending, it forms the basis of cash advances on farm-stored grains in Western Canada and is part of total production for which estimated total expenses were incurred during the year.

Farm cash income, the most important component of farm net income, and supplementary payments are discussed on p. 462. Income in kind, which includes the value of agricultural production consumed in homes on farms where produced and the imputed rental value of farm dwellings, was estimated at \$356,500,000 for 1963, as against \$345,800,000 for 1962; the increase resulted mainly from a rise in the value of poultry products, fruits and vegetables consumed and an estimated higher rental value for farm homes. The value of dairy products consumed was down slightly as was that of meat and forest products.

The value of inventory change is obtained by calculating the change in the quantity of grain and the number of livestock on farms between the beginning and the end of the year and valuing the difference at annual average prices. The value of inventory change at the end of 1963 was estimated at \$306,800,000 as compared with \$188,000,000 at the end of 1962. The 1963 estimate reflects an increase in the farm number of cattle, calves, hogs and chickens, together with a substantial rise in the quantity of farm-stored grains, particularly wheat, resulting from the large production of that year.

Operating expenses and depreciation charges include farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible they exclude outlays for goods and services obtained directly from other farmers. All subsidy payments are taken into account so that the estimates represent only the net amounts paid by farmers. During 1963, these expenses and depreciation charges totalled \$2,180,200,000, nearly 5 p.c. above the previous record high of \$2,079,600,000 established a year earlier. Almost without exception, higher outlays were made by farmers for each of the items of goods and services used in the farm business. The greatest increase in expenditure in 1963, both on a percentage basis and in absolute terms, was for fertilizer; the increase from \$90,400,000 in 1962 to \$105,900,000 resulted from a combination of higher prices, purchases of larger quantities and the use of fertilizers with higher

* Information on the methods and concepts used to determine the contribution of agriculture to national income is available in DBS publication *Handbook of Agricultural Statistics, Part II*.

plant-food content. An increase of about 12 p.c. in the gross rent payable on tenant-operated properties reflected the larger crops harvested in Western Canada and the consequent rise in share-rent payments in that area. Repairs to farm machinery in 1963 were also estimated to be about 12 p.c. above the 1962 level, largely because of a substantial increase in farmers' purchases of repair parts.

Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production for Canada was estimated at 164.1 for 1963 (1949 = 100), 7.8 p.c. above the previous record high estimate of 152.2 established in 1962. For the most part, this gain was attributed to the increased output of grain, particularly wheat, in Saskatchewan and Alberta. Also contributing to the higher total production in 1963 were small increases in the output of cattle, hogs, poultry, dairy products and fruits. Reduced production was recorded for potatoes, vegetables, calves and eggs.

On a provincial basis, the most important increase in farm production occurred in Saskatchewan where total output was up by one third over the 1962 estimate, largely as a

result of the bumper wheat harvest in 1963. For much the same reason, the index of production in Alberta rose by just over 14 p.c. The only other province for which an increase was recorded was Nova Scotia where the index moved up fractionally because of increased output of such important items as poultry products, hogs and fruits. For the remaining provinces, production was down in 1963. A decline of approximately 14 p.c. occurred in Manitoba where unfavourable weather conditions reduced field crop yields quite significantly but reductions in the other provinces were relatively small.

The index has been designated as an index of unduplicated gross farm production and, in its construction, provision has been made to avoid double counting of farm output. Within a province, such double counting occurs when feed grains, credited to field crop production, are fed to livestock, and appear later as livestock and livestock products. Interprovincially, this duplication occurs when feed grains produced in one province are fed in another, and when feeder cattle raised in one section of the country are shipped to another for finishing.

8.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1950-63 (1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the revised index, methods and coverage, see DBS publication *Index of Farm Production 1962* (Catalogue No. 21-203).

Subsection 3.—Field Crops

The year 1963 was the best in history for field crop production in Canada in terms of total output, and new production records were established for production of all wheat, mustard seed, sunflower seed, tame hay and corn for grain as well as for average yields per acre of oats for grain, mixed grains and sugar beets. The index of field crop production reached 176.3 (1949=100), well above the 1962 level of 154.9 and exceeding the previous record of 172.0 established in 1952. The field crop outturn was exceptionally large in Saskatchewan where the index reached 250.3 compared with the previous record of 236.2 set in 1952.

During the 1963 growing season, moisture supplies were generally adequate and temperatures were about normal over large sections of the Prairie Provinces. However, drought conditions continued to affect parts of southeastern Alberta until early June, and dry weather during the summer months sharply reduced output in the Peace River area of Alberta and British Columbia. Many crops in southern Manitoba did not overcome the effects of late seeding, caused by excessive moisture and flooding, and suffered damage

from widespread leaf rust infection and hot weather before maturity. Outbreaks of grasshoppers and cutworms were also widespread, but the application of effective control measures reduced the losses from this source. In Eastern Canada temperatures tended to be below normal during the spring months and extremely variable in the late season and rainfall was deficient in many areas of Ontario and in parts of Quebec and New Brunswick. These conditions reduced yields of most spring-sown crops, especially corn, soybeans, oats and mixed grains. Prince Edward Island and Nova Scotia, however, experienced good growing weather. Harvesting conditions in most of Canada were satisfactory.

Canada's 1963 wheat crop amounted to a record 723,400,000 bu., surpassing the previous peak of 702,000,000 bu. harvested in 1952 and exceeding the 1962 outturn of 565,600,000 bu. by 28 p.c. The acreage seeded to all classes of wheat at 27,600,000 was surpassed only in 1940 when 28,700,000 acres were sown, while the average yield per acre at 26.2 bu. was exceeded only by the 1952 crop which averaged 26.8 bu. per acre. The quality of the 1963 crop was generally excellent and the average protein content of hard red spring wheat was 14.3 p.c., the third highest level on record.

Production of grains used principally for livestock feeding purposes (oats, barley, mixed grains, corn and buckwheat) totalled 15,300,000 tons compared with 14,700,000 tons in 1962 and contrasted sharply with the 9,600,000 tons produced in 1961, when drought cut back production in the Prairie Provinces. On a national basis, feed grain supplies in 1963 were generous in relation to livestock numbers, even though many areas in Eastern Canada experienced reduced average yields. Average yields in the prairie region were well above normal. Canadian supplies of tame hay and fodder corn were also large, the former crop establishing a new production record.

Reflecting the generally satisfactory growing conditions in the Prairie Provinces as well as acreage increases, production of flaxseed, rapeseed, sunflower seed and mustard seed all registered sharp increases over the previous season. In contrast, soybean production in Ontario declined markedly as a result of unfavourable weather. The potato crop was large, with average yields per acre only moderately below the record established in 1962. Sugar beet outturns of 13.5 tons per acre compared with 13.1 tons in 1962 and production of this crop was only slightly smaller than the record set in 1958.

Early estimates indicate that the total gross farm value of 1963 field crops will exceed the 1962 value and the 1955-59 average value by a wide margin. Average farm prices for major cereal crops, after remaining relatively stable during the 1955-59 period, rose moderately during 1960-61 as large carryover stocks which had accumulated during the mid-1950's were drawn down. The severe drought which struck the Prairie Provinces in 1961 raised the possibility of shortages and prices responded accordingly. The average farm price for all classes of wheat during the 1961-62 crop year reached \$1.72 per bu., which was the highest level since the record \$2.37 per bu. attained during the 1919-20 crop year. Although average farm prices for wheat declined to \$1.66 during the 1962-63 crop year, production was double that of the preceding year and gross farm value of the crop was nearly twice as large.

Wheat continues to be the major Canadian field crop in terms of gross farm value and is the major cash crop. The gross farm value of all crops in 1962 amounted to \$2,118,804,000 and wheat contributed \$941,436,000 or 44 p.c. to this total. In Saskatchewan alone the 1962 wheat crop was valued at \$591,180,000, making up more than a quarter of the gross farm value of all Canadian field crops. With the exception of rapeseed, sunflower seed and dry peas, the gross farm value of each crop was larger in 1962 than in the preceding year although, when compared with the 1955-59 average, barley, dry peas, buckwheat, flaxseed, mustard seed, potatoes and field roots all registered decreases.

Stocks of Grain in Canada.—Table 12 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1960-63, with averages for the five-year periods 1950-54 and 1955-59. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

12.—Carryover of Canadian Grain as at July 31, 1960-63, with Averages for 1950-54 and 1955-59

NOTE.—Figures for individual years before 1960 will be found in the corresponding table of previous editions of the Year Book.

Subsection 4.—Livestock and Poultry

Livestock.—Features of the livestock industry in 1963 were: sharply reduced exports of live cattle to the United States; lower prices than in 1962 for cattle and hogs; sharply reduced output of hogs in the Prairie Provinces almost compensated for by increases in Eastern Canada; and a record volume of pork imports which amounted to almost 90,000,000 lb. More cattle and calves were kept on feed in Canada and a higher proportion of cattle graded choice and good at markets. The number of cattle on farms continued to rise for the fifth successive year and there was a moderate recovery in hog numbers following a decline in 1962.

The total number of cattle and calves on farms at June 1, 1963 was estimated at 12,305,000 head, up almost 2 p.c. from 12,075,000 at June 1, 1962. The number of cows and heifers kept for milk production declined by slightly over 1 p.c. but the number of beef cows was up 4.6 p.c. and beef heifers, steers and calves increased 6.1, 2.3 and 2.2 p.c., respectively, over 1962. The number of sheep and lambs on farms declined almost 9 p.c. in Eastern Canada and 4.5 p.c. in the western provinces from a year earlier, to total 1,340,000 at June 1, 1963. The number of horses continued to decline; it was estimated to be 447,800 at June 1, 1963, down 6.2 p.c. from the previous year, and was only about 13.5 p.c. of the average of 3,330,000 head in the decade 1921-30 when the transition to mechanization was still in its early stages.

Tables 13 and 14 give numbers and values of livestock on farms in 1962 and 1963 compared with the figures for 1954.

¹ Cows and heifers, two years old or over, kept for milk purposes.

The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1954 are given in Table 15. Local wholesale butcherings and slaughtering carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 15 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XVI of this volume. On a gross value basis, it normally ranks among the four largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Almost 5 p.c. more cattle were slaughtered in inspected establishments in 1963 than in 1962. Slaughtering of calves, however, were down 5.5 p.c., more calves being kept on feed to be marketed later as beef cattle. Inspected slaughtering of sheep and lambs and of hogs also declined by 6.2 p.c. and 2.0 p.c., respectively.

Price movements in 1963 are indicated by the annual average calculation of prices on the Toronto, Montreal, Winnipeg and Edmonton markets as shown in Table 42, p. 492.

Subsection 5.—Dairying

Milk production in 1963 established a new record at 18,388,000,000 lb., a slight increase over 1962. Of the total milk produced, 62.1 p.c. was used for factory-made dairy products, 27.3 p.c. was sold in fluid form and 10.6 p.c. was used for all purposes on farms.

18.—Production and Utilization of Milk, by Province, 1961-63

NOTE.—Because of intercensal adjustments, the figures in this table for 1961 and 1962 have been revised since the publication of the 1963-64 Year Book; revisions go back to 1957.

¹ Used in farm butter only.² Includes values of skim milk and buttermilk retained on farms.

Total butter production in 1963 amounted to 362,193,000 lb., of which 351,720,000 lb. was creamery butter. The latter production was about 10,000,000 lb. lower than in 1962 but the carryover from the previous year (135,450,000 lb. plus 102,600,000 lb. butter equivalent of butter oil), minus exports of 19,359,000 lb., brought the total available for consumption amounted to 18.56 lb. in 1963 compared with 17.27 lb. in 1962, leaving the largest carryover on record at the end of the year; it amounted to 136,748,000 lb. of creamery butter plus 82,662,000 lb. equivalent in oil.

Factory cheese production in 1963 was estimated to be 152,631,000 lb., 16.5 p.c. higher than in 1962. Peak cheese production occurred in 1942 when the output was 207,431,000 lb. and peak exports in 1945 when they amounted to 135,409,000 lb. Exports of cheese, mostly cheddar, in 1963 were 25,823,000 lb. compared with 27,252,000 lb. in 1962.

¹ Because of intercensal adjustments, the figures for 1961 and 1962 have been revised since the publication of the 1963-64 Year Book; revisions go back to 1957.

² Factory-made cheese includes cheddar and other cheese made from whole milk and cream.

³ Amounts for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

The output of concentrated whole milk, normally only slightly in excess of domestic requirements, was 6.2 p.c. above requirements in 1963. Exports dropped off 12.5 p.c. from the 1962 total and per capita consumption was down 1.2 p.c. Skim milk powder production at 176,066,000 lb. was 16,226,000 lb. below production in 1962. Exports rose from 35,689,000 lb. in 1962 to about 55,556,000 lb. in 1963 and domestic disappearance at 153,037,000 lb. in 1963 was 15.1 p.c. above 1962 and almost equal to the record high established in 1961.

The estimated consumption of fluid milk and cream, on a milk basis, amounted to 4,624,583,000 pt. in 1963, which was 44,475,000 pt. higher than the 1962 estimate. Daily average consumption per capita remained the same at 0.69 pt. The estimated consumption of milk and cream is given by province in Table 23 and the domestic disappearance of all dairy products in Table 24.

23.—Estimated Consumption of Milk and Cream (expressed as Milk), by Province, 1961-63

NOTE.—Because of intercensal adjustments, the figures in this table for 1961 and 1962 have been revised since the publication of the 1963-64 Year Book; revisions go back to 1957.

* Includes Newfoundland for all manufactured dairy products.

² Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.e. fat, formula milks, evaporated milk of 2-p.e. fat, and concentrated liquid milk.

³ Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.

⁴ Includes ice cream mix in terms of milk.

Subsection 6.—Fruits and Vegetables

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is very important to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain areas in these provinces and a large percentage of the crop is frozen and exported. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

Tables 25 and 26 show the estimated commercial production of fruit, by kind, for the years 1961-63 and by province for 1956-63.

25.—Estimated Commercial Production and Farm Value of Fruit, 1961-63

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include acreages or production of vegetables grown for home use on farms or elsewhere.

**27.—Estimated Commercial Acreage of Vegetables, by Province, 1961-63

¹ Estimates apply only to that portion of the crop grown for processing in Quebec, Ontario, Manitoba and Alberta in 1958; in Ontario, Manitoba and Alberta in 1959-63.

² Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia.

Subsection 7.—Other Principal Farm Products

Tobacco.—The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie; most of the cigarette tobacco comes from this district. In Ontario as a whole, 116,571 acres of flue-cured or Bright Virginia type tobacco were harvested in 1962. This is the most important type grown in Canada, although dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. Quebec is the second most important producing province; in 1962, 5,319 acres of flue-cured tobacco, 3,055 acres of cigar tobacco and 527 acres of pipe tobacco were harvested in that province. Recently, small acreages have been successfully grown in Prince Edward Island, Nova Scotia and Manitoba.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229; by 1959 the annual per capita consumption (calculated on the basis of total population) had increased to 1,939. The figure for 1961 was 2,012 and that for 1962 was 2,083.

29.—Acreage, Production and Value of the Commercial Crop of Leaf Tobacco, by Province, 1958-62

¹ Includes other types not specified.

Eggs.—Egg production in 1963 at 417,900,000 doz. was 3.7 p.c. lower than the estimated output of 434,200,000 doz. in 1962, and 6.8 p.c. lower than the record production of 448,200,000 doz. in 1959. There were 3.9 p.c. fewer layers than in 1962 but the rate

of lay per 100 layers increased to 19,943 from 19,921. The farm selling price of eggs averaged 37.5 cents per doz. compared with 34.3 cents in 1962, resulting in an increase in the total value of eggs produced.

The three Maritime Provinces produced 7.8 p.c. of the total production in 1963, Quebec, 15.8 p.c., Ontario, 40.7 p.c., the Prairie Provinces, 24.8 p.c., and British Columbia, 10.9 p.c.

¹ Total laid less loss.

Wool.—Canada's wool requirements are met largely by imports which amounted to 59,805,000 lb. (greasy basis) in 1963 compared with 54,308,000 lb. in 1962. Exports amounted to 4,661,000 lb. in 1963 and 3,972,000 lb. in 1962. The apparent domestic consumption of wool shown in Table 32 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

Honey.—Honey statistics have been compiled on an all-Canada basis since 1924. Production in 1963 was 42,100,000 lb., second in amount to the 45,100,000-lb. crop of 1948 but considerably larger than the 1962 crop of only 30,700,000 lb. The 1963 increase was attributable mainly to a higher average yield per colony and, to a lesser extent, a larger number of colonies operated.

Honey is produced commercially in all provinces except Newfoundland and yields tend to vary considerably from year to year. Ontario usually has been the largest producer but in 1963 Alberta's output, estimated at 11,600,000 lb., surpassed Ontario's 11,000,000 lb.; Manitoba was third, followed by Saskatchewan and Quebec. Honey bees are kept in some of the fruit growing districts of the country for purposes of pollination and are also used for the pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1963, 4,350,000 lb. of honey valued at \$982,000 were exported from Canada, mainly to Britain.

Sugar Beets and Beet Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined largely to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

Maple Sugar and Maple Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for recent years are presented in Tables 37 and 38. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 251 nurseries reported shipments in 1962. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to \$553,725 in 1962 compared with \$549,288 in 1961, and of ornamental species to \$4,165,396 in 1962 compared with \$3,927,979 in the previous year.

Greenhouse Operations.—Annual surveys have been made of greenhouse operations for 1955 and subsequent years. Data are reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which is based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

Subsection 8.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1963, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1963 are final prices for all grains. For the remaining months of 1963, the western grain prices used in the index are initial prices. Subsequent participation payments made on the 1963 crops will be added to the prices currently used and the index revised upward accordingly.

40.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1959-63, and Monthly Indexes for 1962 and 1963

(1935-39 = 100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946. Monthly prices of grain and of live-stock are carried in the current issues of the same publication.

¹ No sales reported.

Subsection 9.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 13 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 43 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1957-61 as an average for comparison with the years 1961 and 1962.

¹ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. ² Honey included with "other" prior to 1960. ³ Includes soybean flour.

⁴ Tomatoes canned, tomato juice, tomato pulp, paste and purée. ⁵ Exclusive of Newfoundland. ⁶ Includes process cheese. ⁷ Includes cream expressed as milk.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canada, total supply, distribution and per capita disappearance of meats and lard are shown in Table 44. All estimates are on a carcass-weight basis except canned meats, which are in terms of product.

Section 4.—Agricultural Statistics of the Census*

This Section presents a limited amount of information from the 1961 Census of Agriculture. Details are contained in Vol. V of the 1961 *Census of Canada* and in a number of special and advance census reports. A list of these publications and their prices is available from the DBS on request.

Number of Farms.—There were 16 p.c. fewer farms in Canada in 1961 than in 1956, the year of the immediately preceding census. The number dropped from 575,015 in the earlier year to 480,903 in the later. However, part of this decrease was attributable to a change in the census definition of a farm. In the 1956 (and 1951) Census, a farm was defined as a holding on which agricultural operations were carried out and which was (a) three acres or more in size, or (b) from one to three acres in size and with agricultural production during the previous year valued at \$250 or more. In the 1961 Census, a farm was defined as a holding of one acre or more with the sales of agricultural products during the previous year valued at \$50 or more. On the basis of the 1956 definition, the decrease in the number of farms was from 575,015 to 521,634 in 1961, or about 9 p.c.

* Reference is made to the 1963-64 Year Book for summary figures relating to the economic classification of farms (pp. 478-480) and tenure and age of farm operators (pp. 481-482).

¹ See text immediately preceding table.

Farm Areas.—The total area of farms as defined in the 1961 Census was 172,551,051 acres, only slightly less than the 173,923,691 acres recorded in 1956. Improved farm land for the country as a whole was up 3 p.c. from 100,326,243 acres to 103,403,426 acres and unimproved farm land, which includes woodland and rough pasture, was down about 6 p.c. from 73,597,448 acres to 69,147,625 acres. Decreases in total farm area in the six eastern provinces and in British Columbia offset by almost 1,400,000 acres the increases in total farm area in the Prairie Provinces and the Territories. As Table 46 shows, only Manitoba, Alberta and British Columbia reported more farm land under crops in 1961 than in 1956 but the total increase in these provinces was somewhat less than the total decrease in the other provinces. On the other hand, the total increase in improved pasture in the four western provinces was somewhat greater than the total decrease in the eastern provinces and there was a substantial increase in the acreage under summer fallow for Canada as a whole.

¹ Includes field, vegetable, fruit and nursery crop land.

Size of Farms.—Farms are classified by size and by province in Table 47. More than 56 p.c. of the farms of Canada contain less than 240 acres. Size, of course, varies greatly among the provinces; in Newfoundland almost 90 p.c. of the farms are under 70 acres; in the Maritime Provinces 80 p.c. are under 240 acres; in Quebec and Ontario 67 p.c. are between 70 and 240 acres; in the Prairie Provinces 43 p.c. contain from 70 to 399 acres and 54 p.c. 400 or more acres; and in British Columbia 88 p.c. are between 3 and 400 acres in size.

Persons Employed in Agriculture.—The number of persons employed in agriculture declined in each of the ten provinces during the 1951-61 period. Table 48 shows that the agricultural labour force totalled 648,966 persons for all Canada in 1961, down 20.8 p.c. from the 1951 figure. The 1961 total represented 10.0 p.c. of the total labour force; the proportion in 1951 was 15.5 p.c. The number of farmers and farm workers in relation to the total labour force was highest in the Provinces of Saskatchewan and Prince Edward Island; the proportion was lowest in Newfoundland and British Columbia.

¹ Persons employed on farms and those employed in related agricultural activities such as landscape gardening, groundskeeping, operation of chicken hatcheries, etc.

Farm Machinery and Electrification.—The numbers of most types of machinery on farms increased considerably between 1951 and 1961 as shown in Table 49. However, technological changes were reflected in a reduction in the numbers of such items as threshing machines and grain binders since these types of harvesting equipment are rapidly being replaced by combines.

The proportion of farms reporting electric power increased in all provinces during the same period, although the fact that there were fewer farms resulted in a decrease in the number reporting electric power in certain provinces. The most important increases occurred in Prince Edward Island where the proportion of farms reporting electric power was 22 p.c. in 1951, 40 p.c. in 1956 and 78 p.c. in 1961; in Newfoundland where the increase was from 38 p.c. in 1951 to 44 p.c. in 1956 and 66 p.c. in 1961; in Saskatchewan where the increase was from 16 p.c. in 1951 to 42 p.c. in 1956 and 66 p.c. in 1961; and in Alberta where it was from 25 p.c. in 1951 to 52 p.c. in 1956 and 72 p.c. for the same years.

Farm Capital.—While the value of farm land and buildings in Canada increased by more than one half between 1951 and 1961 and the value of farm machinery and equipment increased by about one third, there was a slight decrease in the value of livestock and poultry on farms. Table 51 gives the value of farm capital by province for 1951 and 1961.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. At the same time, the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals.

Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada. The annual forest harvest of some 3,200,000,000 cu. feet supports a highly complex and diversified export and domestic industry directly employing more than 300,000 persons and paying out \$1,300,000,000 annually in salaries and wages. The forests support 8,000 sawmills and 4,000 wood-using plants, many of them small units contributing appreciably to the income of local economies. The pulp and paper industry alone stands first among Canadian manufactures in terms of employment, wages paid, new investment and net value of output, and the sale of forest products abroad represents about one quarter of the value of Canada's export trade.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence, eight fairly well defined

* Sections of this Chapter that deal with forestry and the federal forestry program were revised by the Department of Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Department of Forestry. Accounts of variations in Canadian physiography and climate are included in a special article on The Climate of Canada, appearing in the 1959 Year Book, pp. 23-51.

forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

<i>Region</i>	<i>Percentage of Forest Area</i>	<i>Region</i>	<i>Percentage of Forest Area</i>
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

Boreal Forest Region.—This Region comprises the greater part of the forest area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars, and white birch, are intermixed and, in certain central portions as well as in the east, red spruce is abundant.

Subalpine Forest Region.—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude. There is also some entry of blue Douglas fir from the Montane Forest and western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

Montane Forest Region.—The Region occupies a large part of the interior uplands of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast, Columbia, and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, though primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland. These are species whose centres of population lie southward in the United States.

Acadian Forest Region.—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes—St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was formerly a more important forest constituent than at present, for the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes—St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Section 2.—Forest Resources

The forest area of Canada is estimated at 1,710,788 sq. miles, and about 57 p.c. of that area is capable of producing merchantable timber. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in the influence they exert on climate, moisture and soil. Table 1 shows the areas of productive and non-productive forest land in each province and territory. Forest land, classified by type of growth and by province, is given in Chapter X at p. 429.

1.—Productive and Non-productive Forest Land, by Province, 1963

Province or Territory	Productive Forest Land	Non-productive Forest Land	Total
	sq. miles	sq. miles	sq. miles
Newfoundland.....	33,862	53,930	87,792
Prince Edward Island.....	813	121	934
Nova Scotia.....	15,080	1,194	16,274
New Brunswick.....	23,887	442	24,329
Quebec.....	220,625	157,500	378,125
Ontario.....	164,568	97,174	261,742
Manitoba.....	58,189	64,632	122,821
Saskatchewan.....	50,239	67,499	117,738
Alberta.....	116,572	41,023	157,595
British Columbia.....	208,411	59,227	267,638
Totals, Provinces.....	892,246	542,742	1,434,988
Yukon Territory.....	42,100	39,100	81,200
Northwest Territories.....	33,600	161,000	194,600
Canada.....	967,946	742,842	1,710,788

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 81 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Department of Forestry Bulletin No. 61, *Native Trees of Canada*.*

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

The predominant part played by pulp and paper, lumber and other forest product industries in the development of Canada has resulted in a widespread tendency to evaluate the forest in terms of timber alone. However, a growing realization of the economic importance of the forest for its non-commercial values, such as recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

* The sixth edition, 1961, is obtainable from the Queen's Printer, Ottawa, price \$2.

¹ Ten inches D.B.H. or over (suitable for saw timber).² Four to nine inches (units of 85 cu. ft.).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 23 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1961) across the country comprise about 3 p.c. of the total productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

¹ Includes 16 sq. miles of "other" provincial Crown land.² Of this total, 320 sq. miles are under lease or licence—293 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory, and the 2 sq. miles in the Northwest Territories.

Section 3.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 5.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1952-61, together with annual data for 1961 and 1962, are given in Table 4. Of the total depletion of the forests in the ten-year period, 86 p.c. was utilized and 14 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of 3,209,711,000 cu. feet comprised 49 p.c. logs and bolts, 40 p.c. pulpwood, 9 p.c. fuelwood, and 2 p.c. miscellaneous products. About 5 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The productive forests of Canada covering an area of 967,946 sq. miles constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at 751,883,000,000 cu. feet and the utilization in 1962 of 3,424,000,000 cu. feet therefore represented less than one half of one per cent of the supply. However, it should be noted that utilization does not occur evenly throughout the productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain their important position in the Canadian economy.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and manufacture of rayon, cellophane and other products of the cellulose industry have extended the use of wood and the increasing production of plastic-wood products, fibre board and laminated wood has resulted in greater use of inferior grades of wood and species of trees and therefore in the more complete utilization of forest resources and the elimination of much waste.

Forest Fire Statistics.—There were 6,285 forest fires reported in Canada during 1962 but, although the number was 6.6 p.c. higher than the annual average for the previous

ten years, fire losses were comparatively light. The total area burned was only about 30 p.c. of the ten-year average and damages were just slightly more than half of the estimated average over the same period. Only twice since 1952 have smaller volumes of saw timber been destroyed—in 1954 and 1957; losses of pulpwood-size timber in 1962 were less than half the average annual losses. More than half the total area burned and more than half of the monetary damages suffered in Canada in that year occurred in Quebec.

¹ Not reported.

² Included in provincial figures.

In 1962 lightning accounted for 26 p.c. of all forest fires and 38 p.c. of the total area burned. Thus, almost three quarters of the year's fires and more than 60 p.c. of the area burned resulted from human error. Persons engaged in recreational activities were responsible for the greatest proportion of the fires—27 p.c. of the total number, which burned over 23 p.c. of the total damaged area.

Section 4.—Forest and Allied Industries*

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw materials for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Technological changes and market shifts are causing Canada to lose some of the unique advantages it has enjoyed in the forest products field. The current situation is discussed in the following special article.

CANADIAN FOREST PRODUCTS AND CHANGING WORLD MARKETS†

Canada's great and widespread forest resources are harvested and processed economically and the products sold competitively at home and in foreign markets. Logging operations supply the raw material to pulp and paper, sawmilling and various related industries which convert logs and other wood into newsprint, chemical pulp, lumber, birch veneer, Douglas fir plywood, and numerous other commodities. Canada manufactures far more of these products than is required for the domestic market—the combination of foreign demand, forest size and quality, skills and efficiency of production, good transportation facilities and ideal location in relation to major consuming centres in the United States has made Canada the world's leading producer of newsprint, the second largest manufacturer of woodpulp and the fourth largest producer of lumber and plywood. The forest industries today account for about one eighth of Canada's manufacturing production and employ 5 p.c. of the labour force but of major importance is the fact that they provide about one quarter of the total exports; in 1963 exports of forest products were valued at \$1,800,000,000 compared with \$2,300,000,000 for mineral products and \$1,400,000,000 for agricultural products.

North America, the major continental market for forest products, uses about 30 p.c. of the world's lumber and 50 p.c. of the woodpulp, newsprint, paperboard and other papers,

* Statistics of these industries are based on the revised Standard Industrial Classification and new establishment concept (see Chapter XVI on Manufactures).

† Prepared by J. T. B. Kingston, Economics Branch, Department of Trade and Commerce, Ottawa.

and Europe, the next largest market, utilizes 25 p.c. of the lumber and 30 p.c. of the pulp and paper. Outside of North America and Europe, the Union of Soviet Socialist Republics and Japan account for a large proportion of world production and consumption. World demand for forest products has risen in the postwar period but at varying rates; for instance, that for coniferous lumber has risen by $2\frac{1}{2}$ p.c. a year since 1950, newsprint by $4\frac{1}{2}$ p.c. and paperboard and other papers by $5\frac{1}{2}$ p.c. In most regions of the world, prewar consumption levels were not reached again until part way through the 1950's, whereas consumption in North America was much less affected by the War. However, demand trends in the highly developed economies have had an influence on other regions. Traditionally, wood was a major fuel, was the basic construction material for buildings and ships and found wide use as pitprops in mines; now, in the more advanced countries, mineral fuels, especially oil and natural gas, have generally displaced wood as a fuel, metals have replaced wood in the construction of ships and certain types of buildings and metals and other minerals are offering keen competition in housing, mine supports and railway ties. Happily, a major and continuing use for wood developed in the paper industry late in the nineteenth century at a time when the rags and other materials previously used were becoming scarce and therefore prohibitive in cost.

Paper and Paperboard.—Utilization of paper and paperboard has been growing steadily since wood became the major raw material for pulping. Most of this development took place in North America and Europe, although paper was invented in China nearly two thousand years ago. Per capita consumption in North America of some 450 pounds a year is three to four times higher than that in Europe and Oceania and very much higher than the average consumption of five to ten pounds a year in Asia and Africa. In general, demand for paper and paperboard is closely related to national income.

Changes in demand for different grades of paper vary considerably. Recently, the large newsprint sector has been rising at a slower rate than most other grades. Consumption of newsprint is directly related to newspaper publishing where growth is dependent on circulation and weekly or daily issue, advertising linage, number and size of pages, etc. North American demand for newsprint, which increased by 2.7 p.c. each year between 1950 and 1956, advanced only 1.3 p.c. a year since then.

There has recently been a notable increase in the output of paperboard, foodboard and wrapping papers, the major material for which is woodpulp. This increase reflects the rapid growth in packaging in North America as a result of the expansion in self-service stores especially supermarkets—a type of selling that is now spreading throughout Europe, Japan, Australia and New Zealand. However, the packaging sector is extremely competitive and new products using other materials are being introduced continually. The use of polyethylene film has become commonplace in recent years and unit costs have dropped sharply, cutting into the consumption of wrapping, sack and bag papers. At one time paperboard displaced lumber in the manufacture of various types of boxes and cases; and now plastics are beginning to compete with paperboard. In the marketing of liquids paper containers successfully challenged glass bottles and containers, particularly in the marketing of milk, and now both are competing with metals and plastics. Smaller quantities of woodpulp are used in the manufacture of rayon, acetates, cellophane and like materials. Of course rayon since its invention has been competing with such natural fibres as cotton silk and wool in the textile field but now both groups are meeting increasing competition from non-cellulose synthetic fibres. No matter in what form the final product of wood is consumed, demand for Canadian timber will be high.

Lumber and Other Wood Products.—Over-all consumption of lumber in North America has not changed greatly in the past ten or fifteen years, although demand has risen somewhat from a low point reached in 1960-61. Thus, per capita lumber consumption has been declining at the same time as the economy and population have been expanding. Building construction takes a sizable portion of the lumber output but housing provides by far the largest market and housing demand depends principally on the rate of family formation, plus such factors as mobility of population, and the replacement and conversion

Many types of highly specialized equipment, suited to particular conditions, are effecting economies in forest operations—in time, labour and utilization.

of housing. In the postwar period, housing has expanded faster than the over-all economy and family formation, first because of the housing backlog developed during the depression and war years and later because of the movement of people from farms to urban centres and the shift of city population to suburban areas. However, this potential for lumber requirements was counterbalanced to some extent by a drop in lumber consumption per dwelling unit, related in part to changes in architecture, types and sizes of units built and the use of smaller sizes of lumber based on increasing technical knowledge. Moreover, competition resulted in the displacement of lumber by plywood, fibreboards and other wood products as well as by plasterboards, stone, concrete, aluminum and other non-wood products. Lumber requirements were also affected by the recent rapid rise in the construction of apartments, in which the average amount of lumber used for each housing unit is only about one third that used for a single-family house.

The use of veneers and plywood instead of solid lumber means a saving in conversion from log to finished product. Yellow birch produced in Quebec and Ontario makes a high quality facing material for furniture and wall panels. Douglas fir plywood produced in British Columbia is primarily a construction material but is also used for packaging and other purposes. Particle board, formed from chips, flakes or shavings with an organic binder combined with heat, has grown in importance because of the desire to utilize wood waste or residues and because it is an inexpensive substitute for lumber. Fibreboard, another competitor for lumber, can also be produced from a wide variety of wood species and residues as well as from other fibrous material.

Many other wood products, although also subject to keen competition, continue in demand. Shingles and shakes have been largely displaced by mineral roofing and siding but are still used where appeal and beauty are requisite. Although concrete and metal are used for railway ties and mine pitprops in many other countries, in North America wood is still used for these purposes and a considerable volume of demand continues for other products varying from poles and piling to fencing and charcoal, flooring, sporting goods, wooden handles, etc.

International Competition.—Most of the world's forest products are produced within the consuming region and international trade is dominated by the movement of goods from Canada to the United States, and from Scandinavia and the Soviet Union to Britain and Western Europe. Although wood requirements are rising rapidly in Europe and Japan and it is anticipated that imports will increase from Canada, nevertheless 80 p.c. of Canada's exports still go to the United States, about 10 p.c. to Britain and only about 10 p.c. to other overseas countries.

While Canadian wood products are facing severe competition in many fields, output is increasing to meet rising demand associated with favourable economic growth at home and abroad since early 1961. Approximately 40 p.c. of Canadian lumber is consumed in the domestic market and over three quarters of the exports go to the United States. Lumber demand in the American market has been growing at an annual rate of approximately 2½ p.c. in recent years but Canadian exports to the United States have been rising about 9 p.c. a year. This situation reflects the rapid rise in American prices for saw timber resulting from competition from veneer and pulp mills for the relatively scarce larger-sized wood; Canada's share of the American market, which was 8½ p.c. in 1956, rose to 13½ p.c. in 1963. Canadian sawmills have an easier supply in saw timber although prices may soon rise if smaller-sized wood is required. In Europe, with costs rising because of the utilization of small-sized wood, imports are increasing to meet greater demand. Canadian exports to Britain were fairly high until 1955 but then declined as shipments from Finland and the Soviet Union began rising. However, Canada's lumber trade with Britain has improved since 1960. Canadian exports to the Common Market countries are not large but have been rising by nearly 50 p.c. a year since 1960. In Japan costs are also rising and Canadian lumber exports have jumped from almost nothing in 1960 to 300,000,000 bd. feet in 1963, but sales to such traditional markets as Australia and South Africa have been somewhat lower in recent years.

American demand for newsprint is rising slowly but new domestic mills in the south and west, where usage is growing faster, are meeting much of this market. Meanwhile, the main markets for Canadian newsprint in the American northeast and mid-west are growing slowly. However, shipments of newsprint to the United States, which account for four fifths of Canadian production, have remained practically unchanged since 1956. Canada produces over 42 p.c. of world newsprint and newsprint accounts for over 40 p.c. of Canada's exports of forest products. Thus, the weakness in newsprint in recent years helps to explain the decline of forest products to one quarter of total export value, and the relative increase in mineral products (including fuels) to one third of the total.

Demand for paper and paperboard has been rising steadily in most parts of the world. For Canada this has meant increased exports of chemical pulp to world markets as well as higher shipments of paper and board to the domestic markets. Three quarters of Canadian exports of pulp are to affiliated companies or to the free market in the United States. However, Canada's exports of chemical pulp account for only 10 p.c. of American demand as compared with 70 p.c. for newsprint. Although still amounting to less than 10 p.c. of the total of 3,100,000 tons, Canada's exports of chemical pulp to Britain have been rising slowly; at the same time, exports to Japan tripled to 166,000 tons in 1963 and those to the Common Market rose by one third to some 180,000 tons.

Canada's Forest Industries.—The development and location of Canada's forest industries is the result of various market factors and changing technology at home and abroad. In early times, large areas of forest were burned when they were considered an obstacle rather than an asset. Yet the forests provided the early settlers with wood for housing and income from the export of masts and square timber to France and later to Britain. Consequently, the forest industries began with the establishment of sawmills

along the St. Lawrence River and in Acadia. As demand for pine developed in the West Indies and the United States, mills were established along the Great Lakes and on the Ottawa River to supply the new markets. A small industry developed in British Columbia, but the Canadian transcontinental railways, the first of which was completed in 1885, provided the first real market outlet for the western industry. Also, the "cut and get out" tactics followed by lumber operators at that time hastened the western migration of the industry, both in Canada and in the United States. Increasing demand for lumber on the Canadian prairies, in the United States, Britain and other overseas markets, along with the opening of the Panama Canal to commerce in 1913, led to the development of huge sawmills on the Pacific Coast.

As competition for virgin timber increased in the United States, some Americans began looking to Canada for logs for their sawmills and, in trying to protect the Canadian industry, most provinces imposed regulations against the export of sawlogs and other roundwood. With the shortage of rags and straw, the American paper industry turned to the use of wood for pulping. Long-fibred spruce and, later, balsam fir and hemlock were considered ideal species for pulping and there were extensive areas of such wood in Canada. In 1911 and 1913, the United States tariff on newsprint and pulp was removed and this led to the development of large pulp and paper mills in Quebec and Ontario to supply the nearby markets in northeastern and mid-western United States. In the postwar period, the pulp

EXPORT MARKETS FOR LEADING CANADIAN FOREST PRODUCTS
1955 - 63

and paper industry has expanded rapidly, especially in British Columbia, to serve the large and growing California market and the markets of overseas countries. At present a new surge of construction is taking place in British Columbia as the giants in North American pulp and paper compete to obtain licences on the Continent's last forest areas available for licensing. Changes in technology have permitted the manufacture of newsprint from southern pines and this, along with the previously mentioned shift in regional consumption, has resulted in a declining share of Eastern Canadian newsprint in American consumption.

The large and progressive producers of forest products have integrated their operations in order to achieve optimum utilization of their forest holdings. Lumber, pulp and paper, and plywood operations are vertically integrated so that logs are put to their most profitable use. In such a situation, high-grade logs go as 'peelers' to the plywood mill and most of the better logs go to the sawmill. The poorer grades, smaller sizes and less-favoured species and the residues from the plywood mill and the lumber mill are used in the pulp or board mill. The cut from Canadian forests has risen but slowly as a result of increasing use of logging and manufacturing waste and the slow growth in newsprint. It has been estimated that the forest will produce an annual net cut of 12,000,000,000 cu. feet under intensive management. At present, the annual cut in Canada is just over 3,000,000,000 cu. feet and the growth in roundwood production is below the world average.

In general, production of lumber and newsprint has risen at a slower rate than the Canadian economy, but the output of Douglas fir plywood and market woodpulp has increased at a faster rate. However, since 1961, lumber production has increased rapidly in response to United States demand. The growth of Canadian forest products in relation to that of the general economy since 1949 is as follows:—

Item	Average Annual Percentage Change			
	1949-56	1956-61	1961-63	1956-63
Gross national product.....	5.5	2.1	5.3	3.0
Industrial production.....	6.4	2.2	6.6	3.4
Lumber production.....	3.9	1.2	11.7	3.2
Douglas fir plywood production.....	16.9	7.4	6.0	7.0
Newsprint production.....	3.1	0.9	0.7*	0.8*
Woodpulp exports.....	6.2	3.8	7.9	5.0

* Adjusted to exclude the 1963 publishers' strikes.

Expectation for the future is that there will be a rising demand for Canadian woodpulp, lumber and other products. Some of this demand for construction materials may be met by increased use of fibreboards, particle board and plywood and therefore tree sizes of timber resources may be an influential factor in choosing between lumber and these substitutes. At the same time, greater use will likely be made of species considered at present to be non-commercial; at one time balsam fir was placed in this category but has been found to be suitable for newsprint. In Eastern Canada a number of pulp companies are turning to sulphate operations in order to utilize jack pine and other available species. In the sulphate process the range of the raw material is not as restricted as for sulphite, and a high quality commodity is produced.

To remain competitive in world markets, the forest industry as a whole has striven constantly to improve equipment and methods. As a result, productivity in all sectors has risen, although the greatest gains have occurred in logging. Wood being a bulky material, one of the main areas for improvement has been transportation—especially from forest to mill. Rivers and coastal waterways have always been an important means for moving wood, either floating separately or in booms, or carried in ships or the new self-loading and unloading barges. The early use of horses or oxen for hauling timber was first displaced by railway logging in coastal British Columbia and then by truck hauling in both Western and Eastern Canada. The introduction of power saws on a large scale has improved productivity considerably. Logging operations in coastal British Columbia have been mechanized for some time but mechanization in Eastern Canada is relatively new and this is where the greatest changes in logging employment have taken place. With output changed

little in the past ten years, employment dropped some 30 p.c. in 1957-58 and declined sharply again in 1960-61. This decline roughly paralleled the abandonment of marginal farms in Eastern Canada where farmers used to do logging in winter, but, at the same time, the forest industries created employment and increased incomes elsewhere together with increasing the efficiency of their operations.

Subsection 1.—Woods Operations

In connection with operations in the woods, the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, charcoal, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

Estimates of woods operations attempt to give actual production figures for all items and are based partly on provincial forest service data for volume. Value, as currently estimated, excludes transportation costs up to and including 1960. In 1961, transportation costs are included to conform with the total activity concept.

8.—Value and Equivalent Volume of Wood Cut in Woods Operations, 1953-62

Year	Value ¹	Equivalent Volume of Merchantable Wood ²	Year	Value ¹	Equivalent Volume of Merchantable Wood ²
	\$'000	M cu. ft.		\$'000	M cu. ft.
1953.....	704,539	3,078,066	1958.....	638,611	2,854,670
1954.....	728,370	3,122,313	1959.....	715,716	3,186,387
1955.....	829,573	3,280,070	1960.....	806,488	3,431,465
1956.....	939,143	3,463,304	1961.....	846,035 ³	3,303,289
1957.....	823,054	3,172,166	1962.....	887,814 ³	3,431,802

¹ Includes value of forest products other than wood.

² In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the remainder of Canada 200. Other factors: pulpwood and round mining timber 85, fuelwood and wood for charcoal 80, poles and piling 15, hewn railway ties 5, fence posts 1.2 and fence rails 1.

³ Includes transportation costs; see text above.

Subsection 2.—Sawmills and Shingle Mills

The sawmill industry includes sawmills, tie, lath, stave, heading and hoop mills. Several other industries also produce lumber and, for this reason, the total lumber production in Canada (9,829,380 M ft. b.m. in 1962) is higher than the lumber production of the sawmill industry (8,505,977 M ft. b.m. in 1962). Lumber is by far the most important single product of the sawmills, in both quantity and value, and Table 11 gives the production and shipments of lumber in addition to the value of all sawmill products shipped in each province in 1962. The quantity and value of lumber shipments by species is shown in Table 12. It may be noted that the quantities of lumber produced are much higher than the quantities shipped; this is mainly due to the fact that a considerable volume of lumber is custom sawn by mills (classified in the sawmill industry) for the account of planing mills (classified in the sash, door and planing mill industry), or for wholesalers and dealers who report the corresponding shipments.

The shingle mills are treated as a separate industry; 1962 shipments of shingles and shakes by establishments classified in this industry are given in Table 13.

11.—Lumber Production and Shipments and Value of Shipments of All Sawmill Products, by Province, 1962

Subsection 3.—Veneer and Plywood Industries

The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to interior wall finishes for homes and other buildings.

Softwood veneer and plywood are produced almost entirely in British Columbia. Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product, which has become almost indispensable to the construction industry—for wall panels, concrete forms, roofing, sheeting and house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies,

trailers, and watercraft; for box panels and crate linings, case goods and core-stock for furniture; and for plywood-faced doors and many other items. The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now widely used in the manufacture of furniture.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of materials. Exports of veneer and plywood produced in Canada have shown a steady increase in value, reaching a record \$53,045,000 in 1963.

14.—Veneer and Plywood Shipments, by Type, 1960-62

Subsection 4.—Other Wood Industries

Based on the revised Standard Industrial Classification, which was introduced in 1960, there are nine separate wood industries other than the sawmills, the shingle mills and the veneer and plywood mills. Most of these industries obtain from the sawmills the wood that they transform into planed or matched lumber, doors, windows, laminated structures, prefabricated buildings, boxes, barrels, caskets, etc. Veneer and plywood are also important raw materials used. However, the wood industries do not include every industry into which wood enters as a raw material. Wood is an important raw material in the manufacture of furniture, agricultural implements, musical instruments, etc., industries which, as proven by experience, are more correctly classified under other groups.

The sash, door and planing mills and the hardwood flooring industries are important in the "other wood industries" group. They are closely dependent upon the house-building activity which was again characterized by an atmosphere of stability in 1962. These industries therefore showed progress in that year as evidenced by the increased shipments of the different products as compared with the preceding year. The value of shipments of wooden doors amounted to \$28,543,000 compared with \$27,357,000 in 1961, the value of sash, windows and window units increased to \$36,510,000 from \$34,727,000 and that of window or door frames to \$9,250,000 from \$8,173,000. Shipments of hardwood flooring amounted to 65,430,000 ft. b.m. valued at \$11,826,000 compared with 62,859,000 ft. b.m. and \$11,224,000 in the preceding year, and shipments of parquet flooring or hardwood floor tiles were 7,209,000 sq. feet valued at \$1,403,038 as against 5,597,000 sq. feet and \$1,068,000 in 1961. Other important products of the wood-using industries include: planed and matched lumber reported at 1,257,300 M ft. b.m. in 1962 and valued at \$88,710,000, laminated structures valued at \$11,205,000, kitchen cabinets and units valued at \$10,642,000 and prefabricated buildings at \$15,900,000.

The above-mentioned products are mostly reported in the sash, door and planing mills group and in the hardwood flooring industries. In fact these industries account for 75 p.c. of the shipments of goods of own manufacture and of the revenues from custom work in all the "other wood industries".

An interesting development in the miscellaneous wood industries group in 1962 was the expansion in the facilities for the manufacture of the particle board. In that year, there were seven establishments reporting shipments of this product to a total of 47,457,000 sq. feet, $\frac{5}{8}$ " thickness basis, valued at \$5,745,000; because of the limited number of manufacturers in the immediately preceding years, statistics on this commodity cannot be released for those years.

Subsection 5.—The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output more than three times that of any other country and provides over 42 p.c. of the world's newsprint needs. Among Canada's exports, the value of newsprint is larger than that of any other single commodity, the United States absorbing 84 p.c. (1962).

There are three classes of mills in the industry; in 1962, 28 were making pulp only, 23 were making paper only and 74 were combined pulp and paper mills. The industry includes several forms of industrial activity—operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Only a small percentage of the pulpwood cut in Canada is exported in raw or unmanufactured form.

Some plants that are included in the pulp and paper industry also convert paper into stationery and other processed paper products, but this conversion within the pulp and paper industry represents only a small part of Canada's production of converted papers and boards, the bulk of which is made in special converting mills classified in other industrial groups. Principal statistics of these industries are given in Chapter XVI on Manufactures.

15.—Production, Consumption, Exports and Imports of Pulpwood, 1957-62

Year	Production of Pulpwood in Canada ¹			Pulpwood Used in Canadian Mills ¹	Exports	Imports
	Quantity	Value	Average Value per Cord			
	'000 cords	\$'000	\$	'000 cords	'000 cords	'000 cords
1957.....	14,968	340,235	22.73	13,367	1,800	180

1962.....	14,624	343,443	23.50	14,883	1,225	150

¹ Given in terms of rough or unpeeled wood; not including wood residue.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best types of paper.

The preliminary preparation of pulpwood is most commonly carried on at the pulp mill although there are a number of rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material intended for export. Pulpwood is commonly measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

The manufacture of the 12,132,507 tons of pulp produced in 1962 entailed the use of 14,882,947 cords of rough pulpwood valued at \$368,960,268 and the equivalent of 2,427,442 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at \$43,797,018.

16.—Mill Shipments of Woodpulp, Mechanical and Chemical, 1957-62

Year	Groundwood Pulp		Chemical Pulps		Total Pulp Shipments ¹

World Newsprint Statistics.—Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 23 and 1939 figures are included for comparative purposes. The six countries listed accounted for 73 p.c. of the estimated world production in 1962, Canada contributing over 42 p.c.

¹ Figures differ slightly from DBS figures given in Tables 20 and 22 because of different bases of calculation.

Subsection 6.—Paper-Using Industries

Starting with 1960, the paper-using group is comprised of five industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but are grouped separately (see Subsection 7).

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in another industry; this occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are now in common use and their manufacture constitutes an important branch of the paper-using industries. Starting with 1960, a number of establishments specializing in the production of plastic bags (cellulose, polyethylene, etc.) previously classed in other industries, are included with the paper bag manufacturers.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Establishments classed as roofing manufacturers also produce a large proportion of the floor tiles manufactured in this country.

Important products manufactured by establishments classed in the miscellaneous paper converters industry are envelopes, waxed paper for packaging, clay coated and enamelled paper and board, aluminum foil laminated with paper or board, paper cups, facial tissues, sanitary napkins, paper towels and napkins, food trays, toilet tissue, etc. Principal statistics of the paper converting industries are given in Chapter XVI on Manufactures.

* Asphalt roofing manufacturers, folding box and set-up box manufacturers, corrugated box manufacturers, paper bag manufacturers, and miscellaneous paper converters.

Subsection 7.—Printing, Publishing and Allied Industries

The printing, publishing and allied industries group is made up of six closely related industries: printing and bookbinding, including commercial printers and bookbinders; lithographing, comprised of commercial printing plants using principally the offset printing process; engraving, stereotyping and electrotyping, including photo-engraving; trade composition or type setting for printers; printing and publishing, comprised of publishers who operate printing plants; and "publishers only", including establishments primarily engaged in publishing and which do no printing.

The revenue resulting from the manufacturing activities of all establishments classed in this group (excluding revenue from auxiliary activities such as trade, etc.) amounted to \$925,443,000 in 1962, an increase of 4.6 p.c. over the 1961 total of \$884,435,000. The revenue from commercial and specialty printing increased to \$423,222,000 from \$399,633,000 in the same comparison. The important individual revenue items to commercial printers in 1962 were printed advertising (\$92,980,000), the printing of newspapers and periodicals for publishers (\$44,737,000), continuous forms and individual gummed sets (\$41,048,000), printed books and blank books (\$27,491,000), greeting cards (\$20,488,000), and tags, shipping and merchandise (\$19,201,000).

The revenue from publishing (publishing and printing or publishing only) advanced to \$438,672,000 from \$425,331,000 in 1961. The advertising revenue to publishers of newspapers and periodicals of all kinds rose to \$308,912,000 from \$298,678,000 and the net revenue from sales or subscriptions to \$103,430,000 from \$100,059,000 in the same comparison. The revenue from book publishing was \$25,810,000 in 1962, slightly less than in the preceding year.

Other revenues reported within this group of industries resulted mainly from specialized services such as plate-making, type-setting, etc., and showed little variation in total from the preceding year.

Section 5.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas and forest experiment stations.

Under the Department of Forestry Act, which became effective on Oct. 1, 1960 and which repealed the Canada Forestry Act, the Minister of Forestry's duties, powers and functions extend to and include "all matters over which the Parliament of Canada has jurisdiction relating to the forest resources of Canada". The main functions of the Department of Forestry include: (1) provision for the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others by means of agreements relating to forestry matters; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Minister may consult with and inaugurate conferences of provincial or municipal authorities, universities, representatives of industry or other interested persons. The Act provides for the establishment of laboratories and other necessary research facilities, and of forest experimental areas on federal lands and for regulations for the protection, care and management of such areas.

To carry out its responsibilities, the Department maintains an Administration Branch, three Research Branches and an Economics Division. The Administration Branch includes

those units of the Department not engaged in scientific research or economic studies. It is composed of five Divisions: Provincial Agreements, Forest Management, Information and Technical Services, Personnel Services and Administrative Services. The Provincial Agreements Division is concerned with the administration of federal-provincial cost-sharing agreements (see p. 530). The Forest Management Division conducts forest surveys on federal lands throughout Canada and provides advice and assistance regarding forest management to the administering agencies. It also provides for the management of forests including timber disposal in certain areas on behalf of other government departments, the most important of these being the military training area, Camp Gagetown, in New Brunswick. Co-operation is extended to the External Aid Office in administering technical assistance programs involving forest surveys in other countries. The Information and Technical Services Division includes both operating and servicing functions in that it provides a program of public information on forestry as well as library, editorial and technical services. A comprehensive public relations and information program, in course of development, will include the production and distribution of a number of lay publications designed to increase public awareness of the importance of Canada's forest resources and the need of conserving them; the distribution of scientific publications and the interpretation of the scientific work of the Department to the general public; the use of press, radio, and television facilities; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects. The Personnel Services and Administrative Services Divisions are servicing elements for the Department as a whole.

The functions of the three Research Branches and the Economics Division, as well as the Federal-Provincial Forestry Agreements program, are described in the following paragraphs.

Forest Research Branch.—The functions of this Branch are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The program is conducted through seven district offices across Canada and often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

Forest management research deals with silviculture, tree biology, forest land and forest mensuration. Many of the silvicultural studies involve (a) assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seed beds, (b) comparing different methods of seeding and planting, and (c) determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of successional changes in most of the important forest types. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection are aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Research in forest inventory methods is of increasing importance because of the continuing programs of forest inventories being conducted in most provinces

and in the northern Territories. Data from air photographs are correlated with field observations to develop new techniques for estimating timber. The use of stand volume tables and various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types.

Adequate protection of forests against fire is of vital importance in Canada. The Forest Research Branch works in full co-operation with provincial forest services in almost all phases of forest fire control. Major contributions of the Branch have been in the fields of fire danger measurement and fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seed bed preparation, of better methods of reporting forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of lightning and other fire causative agencies.

Forest Products Research Branch.—The work of this Branch is directed toward obtaining the necessary background information and data on the properties of Canadian woods, developing new and better uses for wood products, improving manufacturing processes, and effecting more complete utilization of wood substances available from the forest. Its activities, covering every aspect of forest products except that relating to paper, include the determination of the physical, mechanical and chemical properties of wood and their relation to adaptability in use; studies of the factors affecting the quality of wood and of manufactured wood products; determination of the factors that cause wood waste in logging and manufacturing; research and investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of cellulose, wallboards, alcohols, organic acids, and extractives; studies to determine possible new economic and more valuable uses for woods; and research aimed at determining methods and means for the practical and economical utilization of all wood substances available from the annual timber harvest.

The program is conducted at two laboratories—one at Ottawa and the other at Vancouver—with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, wood preservation, paints and coatings, wood pathology, wood anatomy, logging, lumber manufacture and lumber seasoning. The results of Branch research are made available to the thousands of plants comprising Canada's timber manufacturing and wood-using industries. By means of numerous technical publications and through other channels, continuous effort is devoted to the widespread dissemination of research results.

Close liaison is maintained with the forest products industries and the users of timber to ensure that the work of the Branch is of optimum national benefit. Assistance is received from a National Advisory Committee comprising members representing lumber manufacturers and other wood-using groups. There is constant co-operation with various government units in the performance of many special research investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues as an important activity that is undertaken in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

Officers of the Industrial Liaison Service of the Branch visit sawmills and other wood-working plants in their respective regions to keep industry aware of research developments and technical advances which may assist in the solution of industrial problems. The field representatives also keep the laboratories informed of field problems on which research would be of value.

Branch personnel serve on many national technical committees such as those of the Canadian Standards Association, as well as on such international committees as those of the American Wood Preservers' Association, the American Society for Testing Materials, the International Union of Forest Research Organizations, and the Food and Agriculture Organization of the United Nations. Continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding unnecessary duplication of research.

Forest Entomology and Pathology Branch.—This Branch conducts research on forest insects and diseases and maintains regional laboratories and field stations in all principal forest regions of Canada. The forest insect and disease survey is a Canada-wide project conducted by the Branch in co-operation with the provincial forest services and forest industries, the primary objective of which is to maintain an annual census of forest insect and disease conditions, and to detect and predict the occurrence of outbreaks. Results of the survey are made immediately available to the owners and operators of forest lands for use in planning salvage programs and directing control operations or other measures to reduce damage. An important secondary objective of the survey is extension of knowledge of the insects and fungi affecting forest trees, including their life histories, ranges of distribution, and host-parasite relationships.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, and diseases of tree seedlings in forest nurseries. A recent development is the initiation of investigations of virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi in the forest environment. Problems of broad national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated by Branch sections, which are appropriately staffed and equipped for research in these special fields.

The Forest Entomology and Pathology Branch also carries out experiments in control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Recent examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem in New Brunswick, Quebec and Ontario, designed to limit spread and damage through control of the disease vectors and sanitation procedures; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick and Quebec, and the black-headed budworm, the saddle-backed looper and the ambrosia beetle in British Columbia.

Economics Division.—The functions of the Economics Division are to advise the Department regarding the economic implications of present and proposed policies; to keep the economic position of Canada's forest industries under review; to keep in touch with forestry and international developments in other countries; and to conduct economic studies relating to forestry in Canada. Co-operation with international organizations concerned with forestry and in which Canada maintains membership includes the preparation of quarterly and annual statistical reports to the Food and Agriculture Organization of the United Nations and to the Organization for Economic Co-operation and Development. A National Forest Inventory is compiled annually from information supplied

by provincial governments and published by the Dominion Bureau of Statistics in a series entitled *Canadian Forestry Statistics*. This information is also included in Canada's submission to FAO for use in compiling the World Forest Inventory every five years.

Federal-Provincial Forestry Agreements.—The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Subsequently, this Act was repealed and replaced by the Department of Forestry Act, 1960. Since the beginning, agreements have been entered into with most provinces; these now provide for federal financial support for programs of forest inventories and reforestation, for the purchase of capital assets to be used in forest fire protection and for forest access and stand improvement projects.

Under the Department of Forestry Act, a consolidated forestry agreement was entered into with the provinces for a term of two years ending Mar. 31, 1964, covering in a 'single package' the federal aid formerly available under three separate agreements. This agreement gave the provinces considerably greater freedom to allocate federal aid among the specified fields of work. However, in order to obtain its full allotment, a province was required to claim at least 40 p.c. of the total for forest access projects. As the requirements for improved access vary between regions, the proviso that 40 p.c. of the allotment be claimed for forest access projects was deleted from a new consolidated agreement offered to the provinces for a one-year period beginning Apr. 1, 1964. Under this agreement, a total of \$7,910,000 of federal funds is available, the allocation to the provinces being in proportion to their productive forest areas.

Federal assistance is based on payment of 50 p.c. of provincial costs, but reforestation is the one exception. The Federal Government pays \$15 per thousand trees planted, \$4 per acre seeded with ground preparation, \$2 per acre seeded without ground preparation, and \$2 per acre for seedbed preparation to promote natural regeneration. In addition, the Federal Government contributes 25 p.c. of the cost of establishing or expanding forest nurseries.

Costs of management-type surveys are included in the new agreement as sharable, and the reforestation of occupied or unoccupied Crown land qualifies for assistance provided it is carried out by the province.

Since 1951, more than \$40,000,000 in federal funds have been contributed to the provinces under the main forestry agreements, plus \$5,135,000 for aerial spraying against budworm infestations in New Brunswick and, on a smaller scale, in British Columbia, and \$563,000 under a special stand improvement agreement with the Province of Nova Scotia, designed to provide woods experience for coal miners laid off in the Cape Breton area.

Work accomplished with federal assistance has included the completion of forest inventories by seven provinces. Most of the provinces have instituted programs concerned with management-type inventories and at the same time are maintaining their initial inventories in a reliable state. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 16 new forest nurseries and the planting of 219,600,000 trees. Federal contributions of more than \$9,300,000 have been used for the purchase of fire towers, radios, motor vehicles, bulldozers, muskeg tractors, power pumps, hand pumps, hose, aircraft, and the construction of buildings required for the prevention, detection and suppression of forest fires and for the charter of aircraft for patrol, transportation and water-dropping purposes. Several hundred access projects designed to improve protection and permit the management of undeveloped forest areas have been undertaken, with the Federal Government contributing more than \$15,900,000.

Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forest land of the Island is estimated at 12,984 sq. miles and of Labrador at 20,878 sq. miles, a total of 33,862 sq. miles. Most of Labrador's forests are leased but are as yet virtually untouched. Only 578 sq. miles are classified as farm woodlots.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt, every household has legal right to cut 2,000 cu. feet of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by Forest Officers. Approximately one half of the Crown forests are at present under management. Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is generally preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

The Island is divided into three forest regions, each of which is subdivided into five districts. Each region is under the control of a Regional Forester and each district is headed by a District Ranger with a staff of Rangers and Assistant Rangers. Twenty-eight well-equipped forest fire depots and 21 lookout towers, connected by radio-telephone, are operated by the Newfoundland Forest Service; others are operated by the Newfoundland Forest Protection Association, the two paper companies, and the Canadian National Railways. The Forest Service operates four *Canso* aircraft equipped for water bombing, two helicopters for transporting men and equipment and two *Super Cub* aircraft for fire detection.

Forestry operations in Labrador are under the supervision of a Regional Forester located at Happy Valley (Goose Airport). The permanent staff of about 75 persons is augmented by a like number of seasonal employees during the fire season. Forest fire protection bases are established at Northwest River near Goose Airport and at the Carol Lake mining development area. The two paper companies maintain their own fire protection organizations.

Prince Edward Island.—Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division of the Department of Industry and Natural Resources is concerned mainly with planting, woodlot management and fire protection. A small nursery, established jointly with the Federal Government, deals with the Island's needs by providing planting stock for the reforestation of waste lands, the cost of which is shared by the Federal Government, and fulfilling the requirements of private individuals at a reasonable cost.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led to the inauguration of a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not usually constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily. Research is limited mainly to reforestation and woodlot management problems.

Nova Scotia.—The land area of Nova Scotia is 20,402 sq. miles. Of that area, 16,274 sq. miles are classed as forested, 93 p.c. of which is regarded as productive. For Canada as a whole, 91 p.c. of the forest land is held by the Crown in the right of the federal or provincial governments but in Nova Scotia only about 22 p.c. is so held.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Similarly, trained personnel are associated with the forest industry in the administration of privately owned forest lands. The Department administers the Lands and Forests Act as it pertains to all lands and is responsible for forest fire suppression on all lands, regardless of tenure. Forest fire detection is facilitated by 30 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Well-equipped fire suppression crews and rangers are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are in operation some 500 sawmills of various types and sizes, one newsprint mill, two ground-wood pulp mills and a chemical pulp mill. These mills, along with the pulpwood export trade and pitprop production, produced about 250,000,000 ft.b.m. of sawn materials and about 550,000 cords of round products in 1963. Recently, several large, more efficient stationary lumber mills have been established, equipped for the production of pulp chips from sawmill residue. Tremendous strides have been made in the utilization of slabs, edgings and trim for this purpose and about 60,000 cords equivalent of chips were produced.

An active reforestation program has been conducted for many years. Although not as ambitious an undertaking as in some parts of Canada, the program is being expanded in areas where there are less fortunate circumstances relative to natural regeneration. There are six forest nurseries in operation throughout the province. Forest management programs include the construction of access roads into Crown land timber areas and stand improvement under the federal-provincial agreement. Timber, pulpwood and Christmas trees are sold through public tender and cutting is done under the recommendation of the district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation (see p. 386). Investigations involve stand improvement, cutting methods, and insect and disease activities. Extension projects include an active fire prevention campaign, a motion picture program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, and preparation of articles for general distribution, for newspapers and for magazines.

New Brunswick.—Of the total land area of New Brunswick (27,835 sq. miles), approximately 86 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The total volume of wood in merchantable sizes is estimated at 16,900,000,000 cu. feet; coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, colonization, provincial parks, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in forestry leading to B. Sc.F. and M. Sc.F. degrees. It is also responsible for the administration of the Maritime Forest Ranger School in conjunction with the governments of New Brunswick and Nova Scotia and with private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

Quebec.—The forest lands of the Province of Quebec cover an area of 378,125 sq. miles extending from its southern borders to latitude 52° north, between the frontier of Labrador in the east and the Eastmain River Basin in the west. Of this total, 77,805 sq. miles are classed as occupied productive forest land, where tree-felling is done under lease and permit. The area owned privately covers 25,114 sq. miles and federal Crown forests, 225 sq. miles. Approximately 117,481 sq. miles of the productive forest lands of Quebec are unoccupied. About one third of the annual cut comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, supervision of cutting, control of culling, verification of plans for development, collection of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of the water powers situated on the limits leased. A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit holder must produce a sworn statement of quantities cut. The Forest Service endeavours to promote the use of silvicultural methods among the owners of farm woodlots and small forest areas.

Quebec's forest protective system comprises three organizations—the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and of owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each, but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Forestry Department has established a number of nurseries. The first, established at Berthierville in 1908, has three sections—one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and one devoted to forestry experiments and the cultivation of trees for reforestation. The Grandes Piles and New Carlisle nurseries were organized more recently and there are also nurseries in the following counties: Abitibi-Est, Témiscamingue, Îles de la Madeleine, Rimouski, Roberval, Rivière-du-Loup, Témiscouata, Chicoutimi, Abitibi-Ouest, Portneuf and Matapédia. Their object is the preparation of plants for reforesting

nearby districts. 'Floating' nurseries, supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Sweetsburg, St. Pascal, Mont Joli, Baie St. Paul, Pont Rouge, Victoriaville, Scott and Sherbrooke. Plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective for the next ten years of 200,000,000 plants on Crown and private lands.

The Bureau of Silviculture and Botany, an integral part of the Forest Service, is a research organization. At present it is conducting silvicultural experiments in various areas of the province, in natural forests as well as in plantations, to find solutions to the many problems encountered in the work of improving the forest stand. This work is controlled by a network of permanent study points throughout the province. The Bureau has at its disposal a soil and plant tissue analysis laboratory and a forestry pedologist for the study of problems dealing with mineral foods for plantations, reforestation and silviculture.

Ontario.—The management of the forest resources of this province is based upon the Crown Timber Act and the management unit is used as the basic administrative area. For each management unit a plan is prepared according to the Manual of Management Plan Requirements and is submitted to the Minister of Lands and Forests for analysis and approval. All forest activities contemplated during the operating period—cutting, re-establishment and tending—are listed in detail in the operating plan, which is part of and carries out the intent of the management plan. Management plans are revised every 20 years on the up-to-date data of new aerial photographs and a forest re-inventory. The number of management units is subject to change at the time of plan revision, owing to the abandonment or acquisition of timber licences and to division or consolidation of management units. During 1963, 207 management units, classified by ownership and the rights to timber, were recognized: 80 Crown management units, 76 Company management units, 46 Agreement Forest units, and five Nursery Forest units. Of the 80 Crown management units, for which the plans are prepared by Department staff, eight are operating under revised plans, 14 are undergoing scheduled plan revision and 58 are operating under the initial plans. Of the 76 Company management units, for which the management plans are prepared by the licensees, 52 are operating under approved management plans, 20 are in the process of revision and four are operating under initial plans. Of the 46 agreement forest units, for which the plans are prepared by Department staff under agreements with the owners of the land, one is operating under an approved plan, 40 are in the process of plan preparation, and five are undergoing forest inventory. Management plans for the five nursery forests are being prepared by Department staff.

Forest research programs reported in previous Year Books were continued in silviculture, site, tree breeding, reforestation, mensuration and mechanics. A selection of conclusions drawn in 1963 might include the following: by 1963 it was indicated from the tree-breeding studies in red pine that this species is genetically uniform, and therefore an unpromising prospect for improving strains by the conventional means of plus tree selection and seed orcharding; during the year it was found that an application of 200 lb. of urea per acre stimulated new growth of a jack pine plantation near Angus; in 1963 the usefulness was established of a prescribed burning technique by which defective stems of maple below $\frac{1}{2}$ -inch diameter can be eliminated by one fall burning and larger diameters by repeated burnings; analysis in 1963 of data from a 1962 study of airborne heat-sensory equipment in forest fire detection revealed that over 70 p.c. of spot-size fires can be detected in dense coniferous forests.

During the 1963 fire season, 1,885 forest fires occurred in Ontario, burning a total of 56,133 acres. Fire occurrence was 45 p.c. above the average for the years 1951-61, inclusive, but area burned was 42 p.c. below the average for the same years. Lightning accounted for 17 p.c. of all fires reported. By the end of the fire season, 107 candidates had completed a four-week instructor-training course in fire suppression and, as instructors, carried out training programs in their various districts; special training courses for Indians were held

at Red Lake, Pickle Lake and Nipigon. In co-operation with DeHavilland Aircraft Company, a new 200-gal. water-dropping tank was designed and constructed for use on *Otter* aircraft. The new tank is suspended under the fuselage of the aircraft and is readily demountable; its development has resulted in a much improved drop pattern and in improved flying characteristics of the aircraft.

Manitoba.—Effective Jan. 1, 1964, the central administration of Manitoba's forests were reorganized to include two branches—Forest Management and Forest Protection. Each is in charge of a Director and is a branch of the Department of Mines and Natural Resources. The Province is divided into eight Regions, each under a Regional Supervisor who is responsible to the Directors of the Management and Protection Branches.

The Management Branch co-ordinates control measures for the propagation, improvement and management of the forests, the harvest of forest products, and forest inventory surveys. Two nursery stations are maintained to supply stock for reforestation of denuded Crown land and some natural seed areas have been established for nursery stock. Seedlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas tree producers. The program of forest stand improvement comprises thinning, clearing and chemical spraying to remove undesirable species and encourage growth of preferred trees. Forest inventories cover 3,000 to 4,000 sq. miles annually and on the basis of these inventories working plans with annual allowable cuts on a sustained yield basis have been brought into operation.

Timber cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations) by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable. Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 12 long-term Timber Berths, all granted prior to 1930, are in force.

The area of the province under forest fire protection is 120,000 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to back up the aircraft of the Manitoba Government Air Service.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas. The Department co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.—The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of six divisions—Administration, Fire Control, Forest Management, Forest Research, Inventory and Silviculture—is responsible for developing and evaluating forest policies and management programs based on the findings of inventory and research. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into four Regions, each under the supervision of a Regional Superintendent. The Regions are subdivided into Conservation Officer Districts which vary in size according to resource base and population to be served. In the most northern part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 70 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by three aircraft on regular patrol duty during the high-hazard periods. A group of smoke-jumpers, trained to parachute on remote fires, is in constant readiness during the fire season and takes immediate suppression action which it maintains until relieved by overland crews. Northern Saskatchewan's communication system, with more than 875 two-way radio sets in operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities have been assisted recently by the use of helicopters and aircraft equipped for water dropping.

Alberta.—The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service is composed of five branches under a Director of Forestry—Administration, Forest Protection, Forest Management, Forest Surveys and Planning and Forestry Training.

For ease of administration the forest area has been divided into nine Divisions, each responsible for the forest within its boundaries. These Divisions are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include: forest superintendent, assistant forest superintendent, divisional forester, chief ranger, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Divisions have minimum security crews that are employed in forest management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including the processing of timber applications, selection of timber to be sold, the cruising of merchantable timber, inspections of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and the reforestation programs for areas denuded by cutting and fire.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management and protection plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services to the Forest Service and the general public.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. The Branch also organizes and supervises the activities of the Junior Forest Warden Clubs.

Two divisions and part of a third division are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the

Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main prairie provinces river system.

Research in general is carried out by the federal Department of Forestry, which maintains the Kananaskis Experiment Station.

British Columbia.—The productive forest land of British Columbia in 1958 was inventoried at 208,411 sq. miles and, in addition, there were 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of 251,000,000,000 cu. feet; 28,397 sq. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately 1,340,000,000 cu. feet, the total inventory would appear sufficient to support present needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 58 p.c. of the total forest cut each year and the interior cut for almost 42 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Public Working Circles, and Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the establishment of the first "pulp harvesting" area in the vicinity of Prince George. This plan is unique in North America, calling for the integration of a "saw-log" economy with a new pulp industry. Management, silviculture, roadbuilding and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are important aspects of planned, sustained-yield management of the forest resource, and these are constantly under review by the Forest Service. Although the Forest Service does not operate its own fleet of aircraft, extensive use is made of air tankers, patrol and reconnaissance aircraft, and helicopters under seasonal contracts. The predominantly rugged topography of the province and its extensive sparsely populated areas present problems in fire detection and accessibility to fires, and aircraft are playing an increasingly important part in the key initial discovery and attack period by supplementing the fixed lookout system and ground suppression organization. Close liaison with the federal Department of Forestry, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

Subsection 3.—The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University, it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute occupies a building on the McGill campus erected by the pulp and paper industry and a building at Pointe Claire on the western outskirts of Montreal constructed by the Government of Canada. The Institute's facilities include: organic and physical chemistry, physics, hydraulics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 180.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 42 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The head of the Institute's Wood Chemistry Division, who is also Chairman of the Chemistry Department and the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces that cause cellulose fibres in a water suspension to mat together to form paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in such chemical studies as the rate of drying of droplets and fibres. In addition, other members of the Institute's staff who likewise hold concurrent honorary positions at McGill assist in this student training program.

* Prepared by B. W. Burgess, Secretary, Pulp and Paper Research Institute of Canada, Montreal, Que.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Canada's Mineral Industry, 1962-63*

Canada's mineral industry continued to grow and diversify in 1963 as production value reached an all-time high of \$3,000,000,000. Each of the three sectors of the industry—metals, industrial minerals, and mineral fuels—contributed to the 5.3-p.c. over-all increase in output, with mineral fuels production registering the largest advance.

The growth of the industry may also be measured by the index of physical volume of mineral production which reached a new high at 294 (base 1949=100), up from 287 the previous year. The metals index was 194 compared with 198 in 1962; the industrial minerals index rose from 222 to 228; and the mineral fuels index advanced sharply from 481 to 514. The per capita value of mineral output rose in 1963 to an estimated \$158.94 from the previous high of \$153.53 in 1962; in 1950 it was \$76.24. Since 1950, per capita mineral production has increased at an average annual rate of 5.9 p.c. compared with an average annual gain of 4.3 p.c. in per capita value of Canada's gross national product (GNP), as measured in terms of current dollars.

In addition to a new record for the value of mineral production in 1963, the mineral industry experienced a very successful year from several other points of view. Exploration activity and investment generally remained at high levels and accelerated in some directions. Development of properties for production and expansion of established facilities provided for further gains in output and greater diversification in the years ahead. The export of minerals in the form of ore and raw materials and in semi-processed forms continued to account for about one third of Canada's total merchandise exports, which in 1963 were worth \$6,800,000,000. The Canadian mineral industry remained in the forefront among world producers in market development and in the adoption of mining, milling

*Prepared under the direction of Dr. W. E. van Steenburgh, Deputy Minister of Mines and Technical Surveys, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Division; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels and Mining Practice Division, Mines Branch.

PERCENTAGE CHANGE IN MINERAL PRODUCTION
COMPARED WITH GROSS NATIONAL PRODUCT, 1955-63

and processing techniques for more efficient production. The need to be highly competitive is imperative because a condition of abundant supply in world markets exists for many mineral commodities. The Canadian mineral industry depends greatly on a strong position in world markets; in recent years the value of mineral and mineral product exports has been the equivalent of almost two thirds of mineral production value.

The ten leading minerals in terms of value of output in 1963 accounted for 78.7 p.c. of total output, essentially the same as in 1962. Production values were higher for copper, iron ore, zinc, asbestos, oil, natural gas, cement, and sand and gravel but lower for gold, nickel and uranium. The leading minerals, valued in millions of dollars with 1962 figures in brackets, were: crude petroleum, 633 (552); nickel, 363 (384); iron ore, 292 (263); copper, 288 (283); gold, 150 (156); uranium, 149 (158); and asbestos, 135 (130). Canada leads the Free World in the production of nickel, asbestos and platinum metals; is second in cadmium, cobalt, uranium, zinc, sulphur and gold; third in titanium, gypsum, magnesium and lead; and ranks high among world producers of copper, iron ore, silver and several other mineral commodities. Although the United States is Canada's principal export market, having taken 60 p.c. of all mineral exports in 1963, Canadian minerals and mineral products are finding new markets every year and some mineral exports are marketed in as many as forty or fifty countries.

Mineral trends are apparent from an examination of 1963 production values of the three industry sectors and of the provinces. Metals output was valued at \$1,504,500,000, \$8,100,000 higher than in the previous year; shipments of industrial minerals (non-metallic minerals and structural materials) were worth \$607,500,000, up from \$566,000,000 in 1962; and mineral fuels output increased to \$882,400,000 from \$780,900,000 in 1962. Mineral production gains were recorded for all provinces except Ontario, which had a decline of 4 p.c., and Prince Edward Island. Output in the Yukon Territory advanced but there was a 13-p.c. decline in the Northwest Territories. Ontario continued to be Canada's

leading mineral-producing province, accounting for 29.1 p.c. of the total value of mineral output, but its percentage of production has been showing a year-to-year decline since 1959. Alberta, with 21.1 p.c. of the total, was the second highest mineral-producing province followed by Quebec with 17.9 p.c., British Columbia with 8.7 p.c. and Saskatchewan with 9.3 p.c. Thus, Ontario, Quebec and Alberta accounted for over 68 p.c. of the country's total output. Provincially, Alberta had the largest gain in mineral output in 1963 (\$68,500,000) followed by British Columbia (\$25,300,000) and Newfoundland (\$19,900,000).

The following were representative of new mineral developments in Eastern Canada. In Newfoundland, one company commenced asbestos production in a 5,000-ton-a-day mill; in Labrador, one company started producing high-grade iron ore pellets at a 5,000,000-ton-a-year facility at Labrador City and another, with property near Wabush Lake, continued mine development, construction of railway and port facilities and started construction of a 5,000,000-ton-a-year pellet plant at Pointe Noire, Que., the shipping port on the St. Lawrence River. In Quebec, Eastern Canada's first zinc refinery began production at Valleyfield, near Montreal. Three copper-zinc mines in the Mattagami Lake area in the northwestern part of the province commenced production and shipped their zinc concentrates to the Valleyfield refinery. A large iron ore producer completed its first full calendar year of concentrate production from an 8,000,000-ton-a-year plant at Gagnon. In Ontario, mine development and plant construction continued on a 1,000,000-ton-a-year iron ore pellet operation southeast of Kirkland Lake. A tripling in capacity of an iron ore pellet plant to 750,000 long tons a year was completed at Copper Cliff. A producer of

VALUE OF MINERAL PRODUCTION IN CANADA,
BY PROVINCE OR REGION, 1950-63

medium-grade direct shipping iron ore in the Steep Rock Lake area announced plans to build a 1,000,000-ton-a-year pellet plant to pelletize the screened fines from its 2,500,000-ton-a-year operation.

The more notable mineral developments of 1963 in the four western provinces included the first year² of major production of potash in Saskatchewan, with output amounting to an estimated 1,000,000 tons. Output of elemental sulphur in Alberta and British Columbia from the processing of natural gas increased greatly and there was a much-improved sulphur market in Canada, the United States and across the Pacific. The year-end production target of 800,000 bbl. a day of crude petroleum and natural gas liquids was reached. Steady gains were recorded in natural gas production and consumption. The mining industry maintained a high rate of activity in exploration and development of iron ore and base-metal properties, with several mines commencing production.

Canada can look forward with much assurance to continuing expansion of its mineral resource base and steady production growth; its prominent position as a world mineral producer will thereby be maintained and, perhaps, even enhanced. There are many projects under way, both large and small in the three sectors of the industry, which will result in higher output and greater production-diversification. There is, happily, no feeling of self-complacency over past achievements in the industry but rather one of expectancy concerning future major developments. The important base metals discovery made in early 1964 by Texas Gulf Sulphur Corporation in the Timmins area of Ontario gave a great impetus to mineral exploration. Much of the country's favourable mineral-bearing lands, particularly in the northern two thirds of the country, remain unexplored and there is no reason to believe that these areas will be any less productive in mineral wealth than the southern third.

Subsection 1.—Metals

Nickel.—Canadian nickel production during 1963 was 218,649 tons valued at \$362,781,957, slightly less than in 1962. The industry operated at about 93 p.c. of its rated capacity. Canada is traditionally the world's leading supplier of nickel and accounts for about 80 p.c. of Free World production. The leading producers—The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines, Limited—are the world's largest.

Near Sudbury, Ont., International Nickel operated six mines—the Creighton, Frood-Stobie, Garson, Levack and Murray underground mines and the Clarabelle open pit. Also near Sudbury, Falconbridge operated five mines—Falconbridge, East, Hardy, Onaping and Fecunis. As a result of a production cut, the East mine was closed and production was reduced at the other four mines. The company completed and opened a \$1,000,000 addition to its research centre at Thornhill, Ont.

In Manitoba, the Lynn Lake mine of Sherritt Gordon Mines Limited operated at capacity though at slightly lower grade than in 1962. It had a good market for its nickel products sold in briquette and powder forms. The only major change at the Thompson mine of International Nickel was the decision to sink a service shaft at a location on the edge of Thompson Lake.

Several smaller nickel mining operations made good progress in 1963. The Gordon Lake mine of Metal Mines Limited in northwestern Ontario began production with a mill designed to treat 500 to 700 tons daily, although difficulties were experienced in reaching capacity because of poor ground conditions in the mine. A bulk nickel-copper concentrate is trucked to Lac du Bonnet, Man., and shipped to Copper Cliff, Ont., for smelting. The Marbridge Mines Limited mine in La Motte township, Que., was operating at close to its daily capacity of 400 tons. Bulk nickel-copper flotation concentrates, amounting to about 2,800 tons a month, are trucked to Falconbridge, Ont., for smelting. Lorraine Mining Company was shaft sinking to 1,000 feet on its property in the Belleterre area of Quebec. Indicated ore reserves to 800 feet are 550,000 tons of 2.1 p.c. combined nickel-copper. Giant Mascot Mines Limited, near Hope, B.C., treated about 1,200 tons of ore

daily for 23 days each month. Bulk nickel-copper concentrates are exported to Japan. After installation of new equipment, daily mill capacity in 1964 will be about 1,500 tons.

There were no price changes for nickel during the year. Prices remained at 84 cents a lb. for Canada and 79 cents for the United States, both f.o.b. Port Colborne, Ont. The United States price includes import duty of $1\frac{1}{4}$ cents a lb.

Copper.—Mine production of copper increased slightly over 1962 but there was a minor decline in the output of refined copper; total mine output was 458,735 tons valued at \$287,704,456 in 1963. Increased production in British Columbia, Manitoba and New Brunswick offset reductions in Ontario, Quebec, Newfoundland and Saskatchewan. There was no production from the Yukon and Northwest Territories. Five mines started production in 1963 and 12 were under development. A sustained demand for copper has stimulated prospecting in all the copper-producing provinces and territories.

Six smelters for the reduction of copper and copper-nickel ores and concentrates are operated in Canada. In the Sudbury district of Ontario, International Nickel operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines produces copper-nickel matte at its Falconbridge smelter. Hudson Bay Mining and Smelting at Flin Flon, Man., smelts concentrates from its mines in Manitoba and Saskatchewan and copper concentrates from Sherritt Gordon's mine at Lynn Lake, Man. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines, Limited and the Murdochville smelter of Gaspé Copper Mines, Limited, both in Quebec. Copper refineries are operated by International Nickel at Copper Cliff, Ont., and by Canadian Copper Refiners Limited at Montreal East, Que. Production of refined copper in 1963 was 378,911 tons, 1 p.c. less than in 1962.

Production from the three copper-producing mines in Newfoundland totalled 14,058 tons valued at \$8,856,369. At Baie Verte, Consolidated Rambler Mines Limited started construction of a 400-ton-a-day mill in preparation for production in 1964. New Brunswick's copper production totalled 8,150 tons valued at \$5,134,500, more than double the 1962 output. Production was obtained from the Wedge mine of The Consolidated Mining and Smelting Company and from Heath Steele's mine both in the Newcastle-Bathurst district. Brunswick Mining and Smelting Corporation Limited near Bathurst was building a 4,500-ton-a-day concentrator in preparation for production in 1964.

The combined output of Quebec's 21 copper-producing mines was 145,019 tons valued at \$91,362,122, slightly less than in 1962 because of the continuation of production curtailments at Noranda's Horne mine and Gaspé Copper's Needle Mountain mine, and a prolonged strike at the property of Solbec Copper Mines, Ltd. In the Mattagami Lake area, Mattagami Lake Mines Limited, New Hosco Mines Limited and Orchan Mines Limited started production from their mines in October. In the Noranda-Val d'Or-Normetal area, Lake Dufault Mines Limited completed an initial shaft-sinking program and began development of its massive copper-sulphide orebody. Construction of a 1,300-ton-a-day mill was started with production scheduled for 1964. North of Amos, Rio Algom Mines Limited and Joutel Copper Mines Limited continued underground exploration at their respective properties.

Production curtailments at the mines of International Nickel and Falconbridge in the Sudbury area reduced Ontario's copper output by about 5 p.c., to 180,058 tons valued at \$112,137,657. Ontario's producing mines were: Geco and Willroy at Manitouwadge; North Coldstream at Kashabowie; Rio Algom's Pater at Spragge; Kam-Kotia and McIntyre at Timmins; International Nickel (six mines, three mills and two smelters) and Falconbridge (four mines, three mills and a smelter) in the Sudbury district. Kam-Kotia Porcupine Mines, Limited continued underground development of its new orebody and production from it will start in 1964. McIntyre-Porcupine Mines, Limited started production from its low-grade copper orebody in July. Concentrates were shipped to Copper Cliff for smelting by International Nickel. Prospecting parties have been active in northwestern Ontario between Sault Ste. Marie and Port Arthur since the discovery of copper mineralization in the Batchawana area.

In Manitoba-Saskatchewan, Hudson Bay Mining and Smelting Co., Limited, Sherritt Gordon Mines Limited and Stall Lake Mines Limited had a combined output of 47,165 tons of copper valued at \$29,714,095, an increase of 5 p.c. over 1962. Hudson Bay operated a central mill and smelter on ores from the Schist Lake and Chisel Lake mines in Manitoba, the Coronation mine in Saskatchewan and the Flin Flon mine that straddles the Manitoba-Saskatchewan boundary. The company continued development and exploration of its Stall Lake and Osborne Lake mines near Snow Lake, Man.

Copper production in British Columbia at 63,964 tons, worth \$40,297,518, set a new record, exceeding the 1962 value by about 19 p.c. The producing mines were: Cowichan Copper's Sunro at River Jordan and Coast Copper at Benson Lake on Vancouver Island; Britannia at Britannia Beach; Bethlehem in Highland Valley; Craigmont at Merritt; and Phoenix at Greenwood. Bethlehem Copper Corporation increased its mill capacity from 3,300 tons of ore a day to 4,000 tons a day. Western Mines Limited continued surface and underground exploration at its property at the south end of Buttle Lake on Vancouver Island. Granduc Mines Limited on the Unuk River and Granisle Copper Limited on an island in Babine Lake were conducting studies on the feasibility of bringing their properties into production. Exploration parties were active in all parts of British Columbia.

Iron Ore.—The Canadian iron ore industry in 1963 experienced its second consecutive record year; shipments were 30,134,598 short tons, up over 10 p.c. from 1962. The gain was largely the result of higher steel production rates in the United States. All producing provinces shared in the increase but some companies that shipped medium-grade ore encountered lower sales and prices. This was a reflection of a general trend in all consuming countries whereby steel companies are demanding ore of high grade and good physical characteristics. In their efforts to meet these demands, many Canadian ore producers are conducting research programs to develop economical beneficiation processes to improve their ores.

There are five main market areas for Canadian iron ore—the United States, Britain, Western Europe, Japan and Canada. The United States is the principal market and iron ore consumption there rose by 7,500,000 long tons in 1963. United States mines accounted for half of this increase and Canadian mines for most of the remainder. Canadian iron ore shipments to the United States increased mainly because of production capability increases of two large producers owned by United States steel companies; these companies produce high-grade concentrate or pellets particularly suitable for the United States market. On the other hand, non-captive sales of medium-grade ore to the United States continued to weaken. In Western Europe, steel production rates continued on a plateau after a decade of continuous, rapid growth. Canadian iron ore exports to Britain increased but this was because a large tonnage contracted for delivery in 1962 was postponed until 1963. Substantial shipments of high-grade concentrates and pellets from Labrador were made to Britain for the first time; exports to Britain and Western Europe in the past had always been of medium-grade ore. Canadian ore sales to Western Europe continued to decline because of competition from new sources of high-grade ore in Africa, Asia and South America. Activity in the Japanese steel industry picked up again in 1963, following a pause in 1962. Canadian shipments of iron ore to Japan, all from British Columbia, reflected the increase in steel production.

Despite Canada's rapidly expanding iron mining industry, nearly two thirds of the iron ore consumed in this country is imported from the United States. There are several reasons for this but mainly it is because Canadian consumers participated in the development of United States mines or established commercial ties with United States merchant companies prior to 1950, when little ore was mined in Canada. However, Canadian steel companies have recently participated in domestic mining ventures and an increasing proportion of consumption will be of domestic ore. Consumption of domestic ore increased by nearly 10 p.c. in 1963 but imports were about 12 p.c. higher. In 1965 a new producer

in Labrador will begin production of concentrates and pellets and nearly 2,000,000 long tons a year of captive ore will be taken by Canadian steel companies that have interests in the company.

Canadian iron ore producers continue to benefit from the stabilization of the external value of the Canadian dollar at a rate below that of the United States, since most sales contracts specify prices in United States dollars. This benefit is partly offset by increased costs of machinery and equipment imported for property development and production.

In 1963, fourteen companies were directly engaged in iron mining—one in Newfoundland, one with mines in Labrador and Quebec, two in Quebec, five in Ontario, and five in British Columbia. A sixth mine in Ontario shipped small tonnages from stockpile. In addition, four companies shipped iron ore produced as a byproduct of base-metal operations. Iron Ore Company of Canada, with direct-shipping ore deposits astride the Labrador-Quebec border at Schefferville (Que.) and concentrating-grade deposits near Labrador City (Nfld.), is the largest producer, accounting for nearly 40 p.c. of 1963 shipments. Wabana Mines of Dominion Steel and Coal Corporation, Limited, producing medium-grade concentrate from underground mines on Bell Island, Nfld., accounted for 4.3 p.c. of the year's shipments. Quebec Cartier Mining Company's shipments of high-grade concentrate from its operations at Gagnon, Que., made up 23.4 p.c. of 1963 shipments, making it Canada's second largest producer, and high-grade pellets from Hilton Mines, Ltd. near Shawville, Que., accounted for another 3.2 p.c. In Ontario, Algoma Ore Properties Division of The Algoma Steel Corporation, Limited operates mines and a sinter plant at Wawa and accounted for 6.3 p.c. of 1963 shipments. Marmoraton Mining Company, Ltd. produces high-grade pellets at its mine and plant near Marmora, and Lowphos Ore, Limited produces a similar product near Capreol. These two companies shipped 1.4 p.c. and 1.8 p.c., respectively, of Canada's total in 1963. In the Steep Rock Lake area, Caland Ore Company Limited and Steep Rock Iron Mines Limited produce medium-grade, direct-shipping ore and concentrate; they accounted for 7.4 p.c. and 3.5 p.c., respectively, of Canadian shipments. Five British Columbia producers ship magnetite concentrate to Japan and accounted for 6.6 p.c. of Canadian shipments. Byproduct iron ore was produced by the Consolidated Mining and Smelting at Kimberley, B.C., and by International Nickel and Falconbridge Nickel Mines in the Sudbury area. Noranda Mines shipped from stockpile at Cutler, Ont.

Several companies were preparing for iron ore production in 1963. In Labrador, Wabush Mines will produce up to 5,500,000 long tons of iron ore concentrate annually, beginning in 1965; up to 4,900,000 tons of this concentrate will be pelletized in a plant being built at Pointe Noire, Que. Jones & Laughlin Steel Corporation will begin production of high-grade pellets, up to 1,000,000 long tons a year, at a new mine plant near Kirkland Lake, Ont.; it is scheduled for completion in 1964. In British Columbia, Coast Copper Mines Limited will begin recovery in 1964 of 250 long tons of magnetite concentrate a day as a byproduct from copper ore at its mine on northern Vancouver Island.

Gold.—In 1963 the average Royal Canadian Mint price for gold rose to \$37.74 an oz.t. in Canadian funds from \$37.41 in 1962. Despite the higher price, gold production decreased to 3,979,003 oz.t. valued at \$150,175,632 from 4,178,396 oz.t. valued at \$156,313,794 the previous year. On May 2, 1962, the Canadian dollar was stabilized at 92½ cents in terms of the U.S. dollar but could fluctuate 1 p.c. either side of the fixed value. The range in value for the Canadian dollar was thus set at from \$0.916 to \$0.934 in relation to the U.S. dollar and the corresponding Mint price for gold between \$37.46 and \$38.22 per oz.t.

An Act to amend the Emergency Gold Mining Assistance Act was passed by the House of Commons on Dec. 9, 1963. This amendment extended the Act to the end of the calendar year 1967, without changing the present method of computing the amount of assistance payable. New provisions in the Act required, however, that new lode gold mines commencing production after June 1965 must provide direct support to existing gold

mining communities to qualify for cost assistance. Despite continuing cost assistance, many gold mines were having difficulty in continuing to operate. Increased depth of mining and lower grades of ore available for mining increased operating costs. Two small gold mines ceased operating in 1963 and several others were expected to close late in 1964 or early in 1965. No new gold mines opened in 1963 but a few small ones were expected to start producing in 1964-65.

A total of 50 lode gold mines operated during 1963 and of these 42 received cost assistance under the terms of the Emergency Gold Mining Assistance Act. Mines not eligible for cost assistance sold most of their gold on the open market. During the year, the proportion of gold coming from lode gold mines decreased to 82.6 p.c. from 83.4 p.c. and by-product gold recovered from base-metal ores increased to 16.0 p.c. from 15.3 p.c. Placer gold accounted for 1.4 p.c. compared with 1.3 p.c. in 1962.

Ontario was again the main producer, accounting for 58.5 p.c. of the 1963 gold output compared with 58.0 p.c. in 1962, but production was lower at an estimated 2,326,433 oz.t. compared with 2,421,249 oz.t. in 1962. Only the Kirkland Lake area and Port Arthur mining division showed increases. Twenty-nine lode gold mines operated in the province, the same as in 1962, but H. G. Young Mines Limited in the Red Lake mining division closed in March. Twelve mines operated in the Porcupine district, the chief producers being Hollinger Consolidated Gold Mines, Limited (Canada's second-largest gold producer), McIntyre-Porcupine Mines, Limited and Dome Mines Limited. In the Red Lake-Patricia mining divisions, seven mines operated, the chief producers being Campbell Red Lake Mines Limited, Madsen Red Lake Gold Mines Limited and Dickenson Mines Limited. In the Larder Lake area, Kerr Addison Mines Limited had a 22-p.c. drop in gold output but still remained Canada's largest gold producer. In the Kirkland Lake area, five mines operated, the main producers being Macassa Gold Mines Limited, Wright-Hargreaves Mines, Limited and Upper Canada Mines, Limited. In the Port Arthur mining division, three mines operated, with Consolidated Mosher Mines Limited being the largest producer. Renabie Mines Limited continued operations in the Sudbury mining division. Some 64,000 oz.t. of gold were recovered as a byproduct from base-metal ores in Ontario, mainly from the nickel-copper mines of the Sudbury district. No placer gold production was reported.

Quebec produced 23.4 p.c. of Canada's gold output compared with 23.8 p.c. in 1962. Thirteen lode gold mines operated, one fewer than in 1962, and production was estimated at 931,621 oz.t. compared with 993,560 oz.t. Eldrich Mines Limited ceased operating in December 1962. The largest lode gold producers were Lamaque Mining Company Limited and Sigma Mines (Quebec) Limited, both at Bourlamaque, and East Malartic Mines, Limited at Malartic. Several prospective gold producers were under development. Gold recovered as a byproduct from base-metal ores represented 44.6 p.c. of the provincial total compared with 41.6 p.c. in 1962. No placer gold was reported.

The Northwest Territories produced 9.5 p.c. of the gold recovered compared with 9.6 p.c. in 1962. All production came from lode mines in the Yellowknife district and totalled 378,520 oz.t. compared with 400,292 oz.t. in 1962. Four mines operated with Giant Yellowknife Mines Limited, Canada's third largest gold producer, being the main producer.

British Columbia produced 3.9 p.c. of Canada's output compared with 3.8 p.c. in 1962; recovery was 156,000 oz.t. compared with 159,492 oz.t. The only two large lode gold mines operating were Bralorne Pioneer Mines Limited and The Cariboo Gold Quartz Mining Company, Limited. Byproduct gold from base-metal ores accounted for 30.4 p.c. of the total in 1963 and placer recovery for 1.9 p.c.

Manitoba and Saskatchewan together accounted for 3 p.c. of the Canadian total. Most of the output came from the Flin Flon base-metal mining area and from the San Antonio gold mine. In the Yukon Territory, all gold recovered came from placer operations. The dredging and hydraulic mining operations of The Yukon Consolidated Gold

Corporation Limited in the Dawson City area recovered about 75 p.c. of Canada's total placer gold production. The small gold output of the Atlantic Provinces came as a by-product of base-metal production.

Uranium.—Canada has been one of the world's leading producers of uranium since the metal became important as a fissionable material for military purposes and, more recently, in the development and production of atomic energy for electric power generation. One of the largest known deposits in the world is in Canada where present reserves represent about 37 p.c. of the total in the non-communist world. The production of uranium in Canada has been characterized by features which are unique in this country because the industry was started by the Canadian Government at a time of emergency and, unlike other minerals, the sale of uranium products is government controlled.

The rapid growth of the uranium mining industry since World War II was a remarkable achievement. In 1958, Canada was the world's leading producer of uranium and the value of U_3O_8 produced in both 1958 and 1959 exceeded the value of any other Canadian-produced metal. As an export commodity, uranium ranked fourth in value in 1959 following newsprint, wheat and lumber. Production from 25 mines in that year was 15,892 tons of U_3O_8 valued at \$331,000,000. Since 1959, however, the decline in production, resulting from declining export markets, has been almost as rapid as the spectacular rise from 1953 to 1959. In 1963, 8,141 tons were produced and at the end of the year only seven mines were in operation; it is expected that the number will be reduced to two by the end of 1965.

The present surplus of uranium in the United States and Britain, the major consuming countries to which Canada has been shipping, makes it unlikely that demand will rise again before the 1970's. Practically all of Canada's uranium was sold under contract to the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority (UKAEA). The United States, Canada's largest customer, announced in 1959 that it would not exercise its option to purchase additional uranium from Canada. To prevent a collapse of the industry in 1962 and 1963, when the USAEC contracts would expire, the Government of Canada, through Eldorado Mining and Refining Limited (see p. 121), negotiated a delivery stretch-out for the uranium already under contract with the USAEC and the UKAEA. This plan also permitted the transfer of contracts between companies. By September 1968, when the stretch-out period ends, most companies will have fulfilled their original contracts and any additional ones they may have acquired through transfers from other companies.

In 1962, a contract was signed with the UKAEA for the delivery of 12,000 tons of U_3O_8 over a period extending until late 1971. This contract permitted each of the seven mining companies, which were still operating in 1962, to extend its operating life approximately 16.7 months past the completion date of its previous commitments. However, only one mine will be able to stretch out its production into 1971.

Procurement and marketing of most of the uranium produced in Canada is the responsibility of Eldorado Mining and Refining Limited. Canadian producers are permitted, however, to make small sales of surplus uranium (U_3O_8) to countries that do not hold agreements with Canada for co-operation in the peaceful uses of atomic energy. The maximum amount that any such country may receive in total from Canada is 2,500 lb. Producers may also sell larger amounts, under permit from the Federal Government, directly to countries that hold bilateral agreements with Canada, but sales of this nature have been small.

Orre reserves as of Jan. 1, 1964, were estimated at 225,000,000 tons containing 207,000 tons of recoverable uranium oxide (U_3O_8) and about 82,000 tons of thorium oxide (ThO_2). Reserves in the conglomeratic deposits in the Blind River-Elliot Lake district of Ontario constitute 93 p.c. of Canada's total. Reserves in pitchblende-bearing vein-type deposits in the Beaverlodge Lake area of northern Saskatchewan comprise 6 p.c. and the pegmatitic deposits in the Bancroft area of southeastern Ontario make up about 1 p.c. Scheduled deliveries of U_3O_8 to the USAEC and the UKAEA from 1964 to 1971, inclusive, total 16,851

tons. Thus, by the end of 1971 Canada's reserves will be approximately 190,000 tons of recoverable U_3O_8 if no further exploration is undertaken before then. Domestic requirements of uranium for nuclear power purposes will not appreciably affect Canada's ability to export uranium in the future.

Lead and Zinc.—Based on the lead content of ores and concentrates exported and the lead recovered domestically from ores and concentrates, Canada's estimated production of lead in 1963 was 205,899 tons, slightly less than in 1962. Small increases reported by a number of mines were offset by declines in shipments that resulted, in part, from prolonged strikes at the Solbec mine in the Eastern Townships of Quebec and the Reeves MacDonald mine in southeastern British Columbia. Canada's average annual lead prices during 1963 and 1962 were 11.04 and 9.93 cents a lb. Exports of lead ores and concentrates went to Belgium, the United States, West Germany and Britain, the United States, by far the largest importer, receiving 27,103 tons or 50 p.c. of the total. Lead metal exports totalling 97,144 tons went to 16 countries including Britain and the United States which, respectively, received 44,080 and 31,690 tons; the two together took 78 p.c. of total lead metal exports.

Like lead, estimated production of zinc in all forms, including that from zinc plant residues, at 457,517 tons was slightly lower than in 1962. Most of the decrease was accounted for by the reduced output of the Solbec mine in Quebec and the Reeves MacDonald mine in British Columbia. Output of refined zinc was 283,380 tons, slightly higher than in 1962. The average price for the year was 12.20 cents a lb.; in 1962 it was 11.50 cents. Exports of zinc ore concentrates, totalling 213,044 tons, went mainly to the United States (156,964 tons), Belgium (14,379 tons), Norway (13,035 tons) and Britain (10,616 tons). The remaining 18,050 tons went to four other countries. Of the 25 countries that imported zinc metal from Canada in 1963, Britain, the United States, India and the Netherlands accounted for 186,765 tons, or 94 p.c. of the 200,002 tons exported. By far the largest amounts went to Britain and the United States which imported 82,857 and 74,251 tons, respectively.

All of the Yukon Territory's production of lead and zinc was accounted for by United Keno Hill Mines Limited, which operates mines in the Mayo district some 200 miles north of Whitehorse.

British Columbia's production was mainly from the southeastern part of the province with most of the production being accounted for by The Consolidated Mining and Smelting Company of Canada Limited which operates the Sullivan mine at Kimberley, the H. B. mine at Salmo and the Bluebell mine at Riondel. Daily lead-zinc ore production from these three mines was, respectively, 10,000, 1,200 and 700 tons. Other large producers in this part of the province included Canadian Exploration, Limited at Salmo, Reeves MacDonald Mines Limited at Remac and Sheep Creek Mines Limited at Toby Creek. British Columbia's only producer of copper-zinc ore was the Anaconda Company (Canada) Ltd. which operates the Britannia mine some 20 miles north of Vancouver. There are a number of smaller lead-zinc producers in British Columbia and Consolidated Mining and Smelting treats concentrates from most of these properties, as well as some Yukon Territory and foreign concentrates, at its Trail smelter.

All of Saskatchewan's output of zinc came from the large base-metal mine at Flin Flon operated by Hudson Bay Mining and Smelting Co., Limited. This mine, which straddles the Saskatchewan-Manitoba boundary, was also the source of most of Manitoba's zinc and some of its lead. Other mines operated by Hudson Bay in the Flin Flon area and the Chisel Lake mine in the Snow Lake area of Manitoba accounted for a significant portion of Manitoba's output of lead and zinc. Stall Lake Mines Limited in the Snow Lake area began, in 1963, to mine copper-zinc metal ore at about 100 tons daily. This ore plus all the ore mined by Hudson Bay was concentrated in Hudson Bay's 6,000-ton mill at Flin Flon.

Ontario's two producers of lead and zinc were Geco Mines Limited and Willroy Mines Limited, both of which mine copper-zinc-lead ore at Manitouwadge, north of Lake Superior.

The companies' main products are copper and zinc concentrates; only small amounts of lead concentrate are produced. At Port Maitland on Lake Erie, zinc concentrates from Ontario and Quebec mines are roasted by Sherbrooke Metallurgical Company Limited.

Quebec's lead and zinc production was less than in 1962, due for the most part to the five-month strike at the copper-zinc-lead mine in the Eastern Townships operated by Solbec Copper Mines, Ltd. and to the October 1962 closure of the copper-zinc mine at Noranda operated by Waite Amulet Mines, Limited. Besides Solbec, there were three other producers of ores containing recoverable amounts of lead—The Coniagas Mines, Limited at Bachelor Lake and Manitou-Barvue Mines Limited at Val d'Or in northwestern Quebec, and New Calumet Mines Limited on Grand Calumet Island in the Ottawa River. These three companies produced substantial amounts of zinc; Manitou-Barvue was also a copper producer. Other sources of zinc were the copper-zinc ores mined in northwestern Quebec where two new companies came into production—Mattagami Lake Mines Limited and Orchan Mines Limited in the Mattagami Lake area. The electrolytic zinc reduction plant of Canadian Electrolytic Zinc Limited at Valleyfield near Montreal was placed in operation in October. Concentrates were obtained from several mines in Ontario and Quebec, including the two new producers in the Mattagami Lake area of Quebec. When operating at capacity, production will be at the rate of 200 tons of zinc metal daily.

In the Atlantic Provinces, three companies accounted for all the production. American Smelting and Refining Company, the operator of a zinc-lead-copper mine at Buchans, Nfld., was the largest producer. Magnet Cove Barium Corporation and Heath Steele Mines Limited operated mines at Walton, N.S., and in the Bathurst area of New Brunswick.

In 1963, exploration and development activity was widespread, being concentrated in the Bathurst area of New Brunswick, in northwestern Quebec, in the Snow Lake area of Manitoba, at Pine Point in the Northwest Territories and at Buttle Lake near the centre of Vancouver Island. In the Bathurst area, preparations were made by Brunswick Mining and Smelting Corporation Limited to begin mining one of its large base-metal orebodies early in 1964. An associated company, East Coast Smelting and Chemical Company Limited, began to erect a smelter near Bathurst in which some of the concentrates produced by Brunswick Mining and Smelting will be treated, beginning in 1966. In northwestern British Columbia near Stewart, Silbak Premier Mines Limited commenced preparations to erect a 75-ton mill which will be used to concentrate silver-lead-zinc ore from the old Premier mine property. At Pine Point on the south shore of Great Slave Lake in the Northwest Territories, Pine Point Mines Limited continued preparations to mine its large lead-zinc deposits, with production to commence in 1966.

Silver.—Although two new mines in the Cobalt area of Ontario were placed in production in 1963, Canada's output of silver, which totalled 30,739,429 oz.t., was only slightly greater than 1962 production. The opening of these two mines and increased output of byproduct silver from the copper-zinc mine of Geco Mines Limited brought Ontario's output up by 542,000 oz.t. Output in the Yukon Territory was about 367,000 oz.t. less than in 1962 because of the lower grade of ore mined by United Keno Hill Mines Limited. The large increase of \$7,000,000 in the 1963 value of silver production was accounted for principally by a marked increase in price from \$1.164 per oz.t. in 1962 to \$1.385. Of the total 1963 output, 81 p.c. came from base-metal ores, 17 p.c. from silver-cobalt ores mined in northern Ontario and 2 p.c. from lode gold ores mined in British Columbia, Ontario and Quebec and placer-gold ores mined almost entirely in British Columbia and the Yukon Territory.

Canada's principal producer of refined silver—Consolidated Mining and Smelting Company—at its refinery at Trail, B.C., produced 6,847,606 oz.t., most of which was derived from lead and zinc concentrates originating in mines in southeastern British Columbia and in the Yukon Territory. The remainder of the Canadian output of refined silver was produced from blister copper by Canadian Copper Refiners Limited in Montreal East and by International Nickel at Copper Cliff, Ont.; from gold precipitates by Hollinger

Consolidated Gold Mines Limited at Timmins, Ont.; from gold bullion by the Royal Canadian Mint at Ottawa; and from arsenical-silver-cobalt concentrates by Cobalt Refinery Limited at Cobalt, Ont.

Canada's largest sources of silver are the Calumet, Elsa and Hector silver-lead-zinc mines in the Yukon Territory about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by Consolidated Mining and Smelting. In its fiscal year, ended Sept. 30, 1963, United Keno produced concentrates containing 5,978,075 oz.t. and in 1962 the Consolidated Mining and Smelting Company produced concentrates at the Sullivan mine containing 4,070,666 oz.t. Other important producers of byproduct silver included Mastodon-Highland Bell Mines Limited at Beaverdell in southern British Columbia; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Geco Mines Limited and International Nickel at Manitouwadge and Sudbury, Ont.; and American Smelting and Refining Company in Newfoundland. In the old Cobalt and Gowganda areas of Ontario, where exploration was reactivated as a result of the increased price, a number of firms mined silver-cobalt ores from which 5,193,298 oz.t. of silver were recovered in 1963.

Platinum Metals.—Canadian production of the platinum metals in 1963 amounted to 344,736 oz.t. valued at \$21,848,696. This reduction from the previous year resulted from decreased 1963 nickel production; platinum metals are recovered as a byproduct of nickel mining. World markets for platinum metals were fairly strong in 1963. The group consists of platinum, palladium, rhodium, ruthenium, iridium and osmium; all except osmium are produced in Canada.

During 1963, Canada, the Republic of South Africa and the Union of Soviet Socialist Republics continued to supply the bulk of the world's production of the platinum metals. Estimated world production in 1962 was 1,190,000 oz.t., of which Canadian production was 470,787 oz.t., that of South Africa an estimated 306,180 oz.t. and that of the U.S.S.R. an estimated 375,000 oz.t.

Platinum metals occur in Canadian nickel ores to the extent of about 0.025 oz. per ton of ore. In the treatment of these ores for nickel, the platinum metals follow nickel and are eventually removed as sludges from the electrolytic tanks in which nickel anodes have been formed. The sludge is purified and sent to precious metal refineries in Britain and the United States for recovery of the platinum metals. All of Canada's platinum metals production results from the treatment of nickel ores of the Sudbury district of Ontario and those of the Thompson mine in Manitoba.

Cobalt.—Cobalt is derived as a byproduct from smelting and refining of nickel-copper ores of Sudbury, Ont., and Lynn Lake, Man.; from nickel ores of Thompson, Man.; and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man., and Clydach, Wales, based on its Sudbury and Thompson ores. Falconbridge Nickel produces electrolytic cobalt in the refining of nickel-copper matte exported to its refinery at Kristiansand, Norway. Sherritt Gordon recovers cobalt as a byproduct at its nickel refinery at Fort Saskatchewan, Alta., from its Lynn Lake nickel-copper ores. Cobalt Refinery Limited at Cobalt, Ont., recovers black cobalt oxide, and mixed cobalt and nickel oxide from silver concentrates.

Columbium.—St. Lawrence Columbium and Metals Corporation, the only Canadian producer of columbium concentrates, in 1963 shipped pyrochlore concentrates containing 1,270,000 lb. of columbium pentoxide from its mine and plant at Oka, Que., about 20 miles west of Montreal. Geo-Met Reactors Limited, Ottawa, Ont., is the only Canadian producer of ferrocolumbium, which it sells in Canada and the United States.

Molybdenum.—Molybdenite Corporation of Canada Limited is the principal Canadian producer of molybdenite. Most of its production is converted to molybdic oxide at its mine-site plant at Lacorne, 23 miles north of Val d'Or, Que. In 1963, Gaspé

Copper Mines Limited began production of molybdenite as a byproduct at its Murdochville, Que., copper concentrator. Canadian shipments in 1963 of molybdenum contained in molybdenite and molybdic oxide amounted to 1,000,000 lb., valued at \$1,534,000. Exploration and development work continued at several molybdenum deposits: five miles north of Cadillac, Que.; in the Matachewan area of Ontario; and at Endako, Alice Arm, and Boss Mountain, B.C. Noranda announced plans for a \$5,000,000, 1,000-ton-a-day mining operation at Boss Mountain. Canadian Exploration plans a 10,000-ton-a-day operation at Alice Arm, to start production in 1965.

Titanium.—Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. The Allard Lake ore, mined by Quebec Iron and Titanium Corporation, is smelted by the company in electric furnaces at Sorel, Que., to produce high-titania slag and pig iron. The slag is sold to producers of titanium-based pigments in Canada, the United States, Britain, Japan and other countries. Ilmenite mined at St. Urbain by Continental Titanium Corporation is used as heavy aggregate in weighting oil and gas transmission pipelines and in shielding nuclear reactors.

Selenium and Tellurium.—Selenium production in 1963 totalled 482,960 lb. valued at \$2,240,101, a minor decrease from 1962; tellurium output at 74,942 lb. valued at \$483,271 was about 28 p.c. higher than in 1962. These metals are recovered from the anode muds resulting from the electrolytic refining of copper at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

Magnesium.—An all-time Canadian production record of 8,700 tons was achieved in 1963 by the only Canadian producer, Dominion Magnesium Limited, also the only Canadian source of calcium and thorium. Dolomite of exceptional purity is quarried and reduced to metal by the ferrosilicon method at Haley, Ont. About 6,000 tons of magnesium were exported during the year.

Aluminum.—Canada is second, after the United States, in Free World aluminum production. At the end of 1963, annual capacity was 888,000 tons. Capacity for a further 20,000 tons was completed in March 1964 at the Kitimat, B.C., smelter of Aluminum Company of Canada Limited, and another 20,000 tons will be completed in 1965. This Company also has smelters at Arvida, Isle Maligne, Shawinigan and Beauharnois, all in Quebec. Canadian British Aluminium Company Limited operates a 90,000-ton smelter at Baie Comeau, Que. As all bauxite or alumina used by the aluminum smelters must be imported, mainly from the Caribbean area, metal production is classed in official statistical data with manufactures and not with smelter production of ores and metals of domestic origin. Production of primary aluminum in 1963 was 719,390 tons, of which 635,187 tons were exported. Domestic consumption was estimated at about 155,000 tons as measured at the semi-fabricated level.

Subsection 2.—Industrial Minerals

For the fifth successive year, Canada's industrial mineral production in 1963 rose to a new high. In that year the value of output exceeded \$607,500,000 and amounted to 20 p.c. of the total mineral production. New records were established for asbestos, potash, sulphur, gypsum, cement and sodium sulphate.

Asbestos.—Canada is by far the Free World's leading asbestos producer but is challenged by the U.S.S.R. for first position in world production. Despite competition from the U.S.S.R., Africa and the United States, all of which countries have expanded or are expanding production, Canada has maintained a steady increase in its asbestos exports and is at present supplying about 40 p.c. of the world output. In 1963, 1,206,425 tons of asbestos fibre valued at \$139,447,444 were exported from Canada.
